Washington, D.C. 20402 - Price \$4 (Paper Cover)

Fishery statistics of the United States are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of processed products, the employment of men, craft, and gear in the capture of fishery products; and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality, and gear, and type of craft operated. They assist conservation agencies in regulating the commercial fisheries so as to produce maximum yields without depletion.

Previous statistical reports on the fishery industries were issued under the Department of the Interior in the Administrative Report series for 1938 and in the Statistical Digest series for succeeding years. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

The following is a listing of the various editions of "Fishery Statistics of the United States" issued since 1939:

Statistical Digest Number	Title

ACKNOWLEDGEMENTS

The data in this edition of "Fishery Statistics of the United States" were collected and tabulated by the staff of the Branch of Fishery Statistics under the direction of Charles H. Lyles, Chief, Branch of Fishery Statistics. The material was prepared for publication by Thelma I. Bell. Field surveys were supervised by the various regional and area offices. Project leaders in charge of field surveys were: Dwight L. Hoy, New England, Middle Atlantic and Chesapeake States; George W. Snow, South Atlantic and Gulf States; Victor J. Samson, California; Charles M. Reardon, Washington and Oregon; William K. Evans, Alaska; Howard J. Buettner, Great Lakes and Mississippi River States; and Thomas S. Hida, Hawaii.

The cooperation of the many contributors is gratefully acknowledged. Contributors are given credit for their information in the section of the report in which the data appear.

PREFACE

This report contains a review of the fishery statistics for the year 1965 collected by the Branch of Fishery Statistics, Division of Economics. These statistics include data on the volume and value of the catch of fishery products, employment in the fisheries, quantity of gear operated, number of fishing craft employed in the capture of fishery products, information on the volume and value of the production of processed fishery products, data on cold storage freezings and holdings, and on foreign trade in fishery commodities.

Data on employment of fishermen, fishing craft and gear in the fisheries, and on the catch of fish, shellfish, etc., are shown for States having commercial fisheries. There is also information on the pack of canned tuna and industrial products for Puerto Rico and American Samoa included in the processed products tables. In Section 11, Puerto Rico; catch data are also shown.

In all of the catch tables in this report, except the one on page 46 entitled, "U.S. Catch, 1965 - Live Weight Basis," the volume of fish, crustaceans, and such mollusks as squid is shown in round (live) weight. However, the weights shown for univalve and bivalve mollusks (conchs, clams, oysters, scallops, etc.,) represent the weights of meats, excluding the shell. The weight of shells omitted from the catch in 1965 amounted to about 1.2 billion pounds. It should be noted, however, that the table on page 47 "World Catch of Fish, Crustaceans, Mollusks, Etc., by Countries" is shown on a live weight basis.

In assembling the data on the fisheries, all appropriate records collected by the various State fishery agencies were used. In certain areas, information complete enough to be used by the Statistical agents was available from State agencies, and in these States, only partial surveys were conducted. Information on the means of collecting the data and an explanation of terms used may be found in Section 14 of this publication.

Complete statistical surveys covering the fisheries of the United States were conducted in all areas for 1965. The first complete survey of the fisheries of the United States was made by the Bureau of the Census for 1908. Others were made by the Bureau of Fisheries and the Fish and Wildlife Service for the years 1931, 1950, and for the years 1954 to 1960 and for 1962 and 1963.

SECTION 1 - GENERAL REVIEW

U.S. commercial landings of fish, shellfish, and other forms of aquatic life were 4.8 billion pounds worth a record \$445.7 million--an increase of 236.1 million pounds and \$56.2 million compared with 1964. There were record landings of king crabs, surf clams, Pacific ocean perch, groupers, flounders, swellfish, spiny lobsters, king whiting, and fresh-water crawfish, and record values for shrimp, salmon, crabs, northern and spiny lobsters, flounders, clams, haddock, sea scallops, red snapper, and several less important species.

There were 128,565 fishermen operating 12,311 vessels of 5 net tons or greater and 67,221 motor boats and other boats--a gain of 690 fishermen and 3,120 vessels and boats over 1964. The 415,338 gross tons of the U.S. fleet averaged 35 tons per vessel in 1965--about the same as in 1964, and an increase of about 1.6 gross tons per vessel since 1960.

Fishermen took 821.3 million pounds of shellfish worth \$203.9 million--an average of 25 cents per pound, the same as in 1964. Shellfish accounted for 46 percent of the value but only 17 percent of the volume of the U.S. catch. In the Middle Atlantic, Chesapeake, South Atlantic, and Gulf States, the value of the shellfish catch exceeded the value of fish landings.

Disposition of Catch. In 1965, as in the previous year, the catch taken for human food (2.6 billion pounds) exceeded the quantity taken for industrial products (2.2 billion pounds). The latter include the items manufactured into meal, oil, and solubles; used for bait; fed to fur bearing animals and pets; and manufactured into shell buttons, etc. Bureau statisticians estimate that the 1965 catch was used as follows: 2,587 million pounds (round weight) for human food--of which 1,597 million were used fresh and frozen, 914 million were canned, and 76 million were cured; 282 million for bait and animal food--of which 154 million were used fresh and frozen and 128 million were canned; and 1,908 million pounds for manufacture into industrial products (principally meal, oil, and solubles).

Per Capita Consumption. The per capita consumption of commercially caught fish and shellfish in the United States was 10.9 pounds (edible weight)--0.4 pounds more than in the previous year.

PER CAPITA CONSUMPTION OF COMMERCIALY CAUGHT
FISH AND SHELLFISH, 1962-65
(Edible weight)

Year	Pounds	Year	Pounds
1962.....	10.6	1964.....	10.5
1963.....	10.6	1965.....	10.9

Vessels. The Bureau of Customs documented as fishing craft 663 vessels in 1965--160 more than in the previous year. These vessels totaled 36,474 gross tons--an average of 55 gross tons per vessel. New vessels averaged 9 gross tons per vessel more than in 1964. Of the vessels joining the fleet in 1965, 191 were constructed between 1911 and 1963 and totaled 8,581 gross tons--an average of 45 gross tons per vessel. One hundred and fifty-seven of the 191 vessels were less than 30 gross tons, and the remainder ranged between 30 and 599 gross tons. Some were converted military craft. One vessel was constructed in 1898; the year of construction was unknown for 10 vessels.

The remaining 461 of the 663 vessels were either constructed in 1965 or too late in 1964 to obtain documents in that year and so were added in 1965. Of these vessels, 227 were less than 40 gross tons; 204 were between 40 and 99; 18 were between 100 and 199; and 12 were between 200 and 729 gross tons. The general trend was to larger vessels in the shrimp, menhaden, and tuna fisheries. Many of the new shrimp vessels now being constructed are over 100 gross tons and have engines of more than 300 horsepower.

Principal States. Louisiana again led the Nation in the volume of landings with 798.9 million pounds (17 percent of the U.S. catch). Virginia was next with 504.9 million pounds, followed by Alaska, 492.2 million; California, 458.0 million; Massachusetts, 442.4 million;

GENERAL REVIEW

and Mississippi, 371.6 million pounds. These six States produced 64 percent of the U.S. catch. The same States, in 1964, accounted for 65 percent of the U.S. total.

Alaska led all States in ex-vessel value of landings with \$70.3 million--16 percent of the value of the Nation's catch. California was next with \$50.7 million, followed by Massachusetts, \$46.1 million; Louisiana, \$38.4 million; Texas, \$35.8 million; and Florida, \$35.3 million. These six States accounted for 62 percent of the ex-vessel value of landings.

Principal ports. Pascagoula, Miss. led all ports in volume of landings with 325.1 million pounds. San Pedro, Calif., again led all ports in value of landings with \$31.4 million and was second in volume with 303.8 million, followed by Reedville, Va., 289.3 million; Empire, La., 185.0 million; Cameron, La., 167.8 million; and Houma, La., 151.7 million pounds. Boston, Mass., which led in volume of landings, as recently as 1932 had dropped to 11th place by 1965.

Processed products. The value of processed products was a record \$1.1 billion--16 percent greater than in the previous year. It was the first time that the value of processed products exceeded \$1 billion.

Menhaden. The catch of menhaden was 1,726 million pounds--156.1 million pounds (10 percent) more than in the previous year, but well below the 1961-65 average catch of 1,955 million pounds.

Table 1.--Menhaden landings, by area, 1961-65

¹ Less than 50,000 pounds.

In recent years menhaden have been landed in greater volume than any other fish taken by U.S. fishermen. From 1950 to 1956, the catch increased steadily and by the latter year had more than doubled the 1950 production. Since then, however, landings have fluctuated along both the Atlantic and Gulf coasts, with a marked downward trend on the Atlantic coast.

Many improvements have been made in the menhaden fishery since 1950. Menhaden vessels have increased in size and horsepower. In 1951, for example, no vessel in the menhaden fleet was more than 150 feet long, but by 1965 the fleet had a vessel of 200 feet. In 1958, a vessel from the Pacific Coast States entered the menhaden fishery in the Middle Atlantic area to demonstrate the type of purse seining (with powerblock and nylon net) used along the Pacific coast. By 1960, the mechanization of fishing through use of the powerblock had increased landings of menhaden, reduced the number of crewmen per vessel, and made a more efficient and economical operation. Other improvements were the addition of aluminum, motor-powered purse seine boats and installation of refrigeration aboard many of the larger vessels.

GENERAL REVIEW

Since the end of World War II, spotter planes have helped menhaden fishermen find schools of fish. For example, in the Middle Atlantic States, 15 spotter planes were employed from 1960 through 1963, 13 in 1964, and 8 in 1965. In the Chesapeake area (over Virginia waters) spotter planes were employed for the following years: 1960, 9 planes; 1961, 10; 1962, 11; 1963, 13; 1964, 15; and 1965, 17 planes.

During this period, the market demand for fish meal and oil increased, and imports (which in 1950 had been only 63,900 tons) reached a record 439,100 tons in 1964. In 1965, however, imports of fish meal (270,700 tons) decreased but only because of a decline in the Peruvian anchoveta fishery.

The January 1965 price of menhaden meal (65 percent protein) averaged \$144 per ton, the highest price per ton for this month in the history of the fishery. Prices climbed steadily during the year and reached \$186 per ton in November and December 1965--the highest in the fish meal industry. Domestic producers, however, were not benefiting from the high prices because most of the meal had been sold under contract at lower rates.

Table 2.--Average monthly price of menhaden fish meal at New York City, 1960-65

¹ Nominal price.

Source:--New York Market News Service.

Compared with the previous year menhaden oil prices also improved but their advance was not as spectacular as the fish meal prices. New York quotations averaged 9.16 cents per pound in January 1965--down from 9.38 cents in December 1964. As the season advanced, however, the prices increased and in December closed at 9.50 cents--the highest price in many years. (Table 3)

The decline of the menhaden resource along the Atlantic seaboard caused some industry members to consider using other species that might be harvested with existing equipment; other members began converting some of the fleet to other trawlers to take bottomfish for reduction.

GENERAL REVIEW

Salmon. Salmon landings were 326.9 million pounds worth a record \$65.2 million--a decline of 7 percent in volume but an increase of 16 percent in value compared with 1964. The phenomenal run of red salmon into Bristol Bay was responsible for the largest pack of reds (3.6 million cases) since 1947 and one of the largest in the history of the fishery. Pink salmon, however, were less plentiful than expected, and the pack was correspondingly small. Prices of pinks increased steadily as soon as it became apparent that they would not appear in the expected volume. Beginning at \$21.00 per case, for 48 one-pound tall cans, the prices dipped slightly in March and April to \$20.25 per case and then began a steady rise to \$27.50 in December--the highest price since August 1962.

GENERAL REVIEW

Gains in prices for pink salmon during the last half of the year were sufficient to lift the average price more than \$1.00 per case above the previous year's average.

¹ Average of weekly prices reported during year by Seattle brokers and canners to Seattle Market News Service.

² Forty-eight 1-lb. tallis.

Exports of canned salmon were the greatest in more than a decade--the result of increasingly large exports of canned pink salmon during recent years.

Crabs. The crab catch was a record 335.4 million pounds worth a record \$30.8 million--65.0 million pounds and \$7.0 million more than in the previous year. Compared with 1964, landings increased in the Middle Atlantic, Chesapeake, and Gulf States, but declined in the New England and South Atlantic areas. Most of the crabs taken south of Connecticut on the Atlantic and Gulf coasts are the blue crabs. Pacific coast production of both Dungeness and king crabs increased--the latter established records for both volume and value of the catch in 1965.

GENERAL REVIEW

Efforts to use a mechanical method to extract the meat from blue crabs had not been perfected at the end of the year despite both Government and industry expenditures on separate projects. Each year it becomes more difficult to attract new labor to this industry and, as older workers retire, management finds it increasingly difficult to produce crab meat at a price consumers will pay.

Wholesale prices for lump blue crab meat at New York were lower from May through November than for the comparable period of the previous year; but 1965 prices were higher from February through April and for December.

Tuna. Landings of tuna by the U.S. fleet at ports in continental United States and Hawaii were 318.9 million pounds worth \$41.7 million--a gain of 13.1 million pounds and \$2.3 million compared with the previous year. In 1965, tuna ranked fourth in volume and third in value of the catch. Production of canned tuna, 18.1 million cases worth \$233.0 million, established both volume and value records. Imports of fresh and frozen tuna, including loins and discs, were just slightly greater than in 1964. Retail prices for canned tuna began the year at 32.4 cents for six 6-1/2-oz. light meat chunk tuna and ended the year at 31.9 cents. (Table 8)

Imports of canned tuna declined for the second consecutive year. The decline occurred entirely in imports of Japanese brine pack. About 51.0 million pounds entered the United States--7 percent less than in the previous year and 9 percent less than the 1960-64 average. Eighty percent of the tuna pack canned in brine was received from Japan and was well below the quota for entry under preferred rates. (Table 9)

Shrimp. The shrimp catch was 243.6 million pounds worth a record \$82.4 million--an increase of 31.8 million pounds and \$12.0 million compared with 1964. Despite increased landings and record imports, ex-vessel prices remained stable throughout the year and vessel owners who fished regularly fared very well. Retail ex-vessel prices for 15 to 20 count brown shrimp (heads-off) at Brownsville, Tex., began at 88 cents in January--the same as white shrimp at Morgan City, La., but 5 cents more than pink shrimp at Tampa, Fla. Prices at the end of the year were 90 cents at Brownsville for brown shrimp; 96 cents at Morgan City for white shrimp; and 86 cents at Tampa for pink shrimp. Retail prices, meanwhile, began at 111.8 cents per pound in January and ended at 120.5 cents in December.

GENERAL REVIEW

With a constantly expanding shrimp industry around the world, largely financed by U.S. capital and operated by U.S. technicians, imports of shrimp into the United States increased markedly. A record 179.0 million pounds (heads-off) passed through U.S. custom districts in 1965.

Despite larger imports and landings, cold storage holdings of shrimp declined below the 1964 level. Beginning holdings were 48.5 million pounds; year end holdings were 42.4 million.

Table 13.--First of month shrimp cold storage holdings, January 1963 to December 1965

Haddock. Landings of haddock were 133.9 million pounds worth a record \$13.6 million. The volume was just slightly larger than in the previous year, but the value increased \$1.8 million. Boston continued its traditional role as the leading haddock port and accounted for 64 percent of the U.S. catch--slightly less than in 1964. Gloucester receipts accounted for 21 percent of the U.S. landings--up slightly from the previous year. Large trawlers operating out of Boston fished harder but the catch per vessel declined an average of 92,300 pounds in 1964 to 90,900 pounds per trip in 1965, despite the greater effort. Large trawlers completed 683 trips at Boston in 1965--28 more than in the previous year. Boston's medium trawlers completed just under 800 trips--compared with 883 in 1964.

Supplies of haddock available to U.S. consumers in 1965 were slightly less than in the previous year because imports declined. Wholesale prices for processed fillets gained substantially in 1965. Retail prices also increased during the year and made greater gains than were shown in the consumer food price index.

Ocean perch. Landings of Atlantic ocean perch were 83.6 million pounds worth \$3.4 million--a decline of 5.7 million pounds and \$387,000. Ocean perch were generally plentiful on the fishing grounds but were small, with copepod parasites. Ex-vessel prices did not increase despite the decline in landings. The fleet operating out of Gloucester, the traditional ocean perch port, shifted emphasis from ocean perch to haddock.

Flounders. The flounder catch was a record 180.1 million pounds worth a record \$17.9 million. The Atlantic and Gulf coasts had landings of 133.6 million pounds; the Pacific coast, 46.5 million pounds. Yellowtail flounders (80.3 million pounds) dominated the Atlantic catch; landings, however, were somewhat less than the record 82.9 million taken in 1964. Since 1955, the yellowtail flounder catch has increased strongly. Fluke landings

GENERAL REVIEW

(9.8 million pounds) improved slightly compared with the previous year but were far below the 20.0-million-pound level often reached in this fishery prior to 1961. Blackback flounder production (23.7 million pounds) continued the increase that began in 1956.

The total apparent consumption of flounders in 1965 was 255.0 million pounds--the highest on record.

¹ January 1 cold storage holdings. Round weight equivalent.

² December 31 cold storage holdings. Round weight equivalent.

³ Round weight (factor for converting fillets to round weight is 2.82).

Herring, sea. The catch of sea herring was 110.3 million pounds worth \$1.9 million--down 5.6 million pounds and \$349,000 from 1964. Landings of Atlantic sea herring (75.8 million pounds) increased 12.1 million compared with 1964. Atlantic sea herring are canned in Maine as sardines and also processed into meal and oil. Pacific sea herring are used only for production into meal and oil. In 1965, the pack of canned Maine sardines was 1.3 million cases--401,200 cases larger than in the previous year, but far less than the record 3.8 million cases packed in 1950.

Mackerel, Pacific and jack. The commercial mackerel fishery is confined to a single State, California. Landings of Pacific and jack mackerel were 73.7 million pounds worth \$2.1 million--down 42.8 million pounds from the previous year. The catch is used for canning or reduction into meal and oil.

Oysters. The oyster catch of 54.7 million pounds of meats worth \$27.9 million declined 5.8 million pounds compared with 1964. The value remained about the same. The catch decreased in all sections except the New England and South Atlantic States where production increased slightly compared with a year earlier. In the Chesapeake and Middle Atlantic States, the MSX parasite was responsible for the destruction of some very productive oyster beds. In the Gulf area, the destructive hurricane of September 1965 caused a decline in the Louisiana and Mississippi oyster production. The pack of canned oysters was 288,000 cases--the smallest pack since 1945.

Alewives. Landings of alewives were 78.8 million pounds valued at \$1.1 million--23.8 million more than in the previous year and the largest catch since 1908. Much of the increase was used in industrial products (bait, reduction, and animal food) because alewives

GENERAL REVIEW

no longer have a ready market as a foodfish. The pack of canned alewives (66,900 cases) was the lowest since 1962.

Halibut. The U.S. Pacific halibut catch, 40.5 million pounds (round weight) was worth \$9.2 million--5.4 million pounds and \$3.3 million larger than in 1964. The value was exceeded only by the record value of 1962. Despite increased landings by United States fishermen, the Canadian catch dominated the fishery for the third successive year and accounted for 52 percent of the 1965 production. The Japanese withdrew from the fishery in the triangle area above the Aleutian Islands in 1965.

¹ January 1 cold storage holdings.

² December 31 cold storage holdings.

Note:--The factor for converting fillets and steaks to dressed weight is 1.39.

Halibut prices (ex-vessel and wholesale) increased sharply in 1965 principally because available supplies declined at the same time that consumer demand continued firm. For example, wholesale prices for dressed halibut in New York's Fulton Fish Market averaged 44.9 cents per pound compared with 38.5 cents in the previous year. (See table 19)

Whales. Six vessels operated in the whale fishery--the same number as in 1964. There were three shore stations operating, two in California and one in Oregon. There were 243 whales captured--31 less than in the previous year.

Lobsters. Landings of northern lobsters were 30.2 million pounds worth a record \$22.0 million--a decline of 712,000 pounds but an increase of \$2.1 million compared with 1964. The trend of the northern lobster catch has been generally upward since 1935--reaching a peak production of 31.2 million pounds in 1960. In subsequent years, landings have decreased slightly. At the same time the number of pots fished has increased steadily. For example, fishermen in the New England and Middle Atlantic States used about 579,000 lobster pots in 1950 and about 949,000 in 1965. The average catch per pot has declined from about 40 pounds in 1950 to about 26 pounds in 1965. During these years, a lobster fishery developed in the Middle Atlantic States. An increased market demand in 1965,

with about the same supply as in the previous year, pushed retail prices up sharply. Boston retail prices averaged 30 percent more than 1964, and New York, 20 percent more. The demand for this delicacy continued to grow.

Sea scallops. The sea scallop catch of 20.1 million pounds of meats worth a record \$13.2 million increased 3.2 million pounds and \$3.9 million compared with 1964. Early in 1965, it became evident that sea scallops were no longer plentiful on Georges Bank. By March, some of the vessels began fishing the Hudson Canyon area, and by April in a major shift in fishing effort most of the fleet moved from Georges Bank to Hudson Canyon. By May, many vessels had moved to grounds off the Virginia capes. Sea scallops had first been discovered in this area around 1915, but the grounds had not been fished commercially until recently. The wholesale industry paid the highest ex-vessel prices in history for the catch, and retail prices were correspondingly high. The sea scallop industry has benefited from the continually increasing consumer demand during the past few years. It was apparent, however, that the industry had not gauged consumer demand correctly because stocks increased so quickly that serious marketing problems arose at the end of the year.

Fishery Imports. Both the volume and value of imported fishery products reached new highs in 1965, principally because of record receipts of fresh herring, frozen groundfish blocks or slabs, and fresh or frozen shrimp, spiny lobsters, sea scallops, and tuna.

There were record imports of groundfish and Atlantic ocean perch fillets (including blocks)--295.0 million pounds in 1965, compared with 246.6 million in 1964.

Sea scallops (16.3 million pounds) continued to enter the United States in record quantities despite a lack of scallops on Georges Bank, the fishing area common to both Canadian and United States vessels. Canadian fishermen followed United States vessels farther south, and most of their catches entered the United States as imports.

Imports of shrimp in 1965 were a record 179.0 million pounds (heads-off)--54 percent of the total U.S. supply. The expanding shrimp fisheries around the world continued to export most of their catches to the United States.

GENERAL REVIEW

Fresh or frozen imports of spiny lobsters reached a new high in 1965--37.8 million pounds worth \$61.3 million compared with 35.1 million pounds worth \$43.5 million in 1964.

Imports of fresh or frozen tuna also set a record. The pack from imported fish (196.9 million pounds) was 55 percent of the canned production.

Imports of fish meal (270,700 tons) were 168,500 tons less than in 1964--principally because of the decline in production of fish meal in Peru.

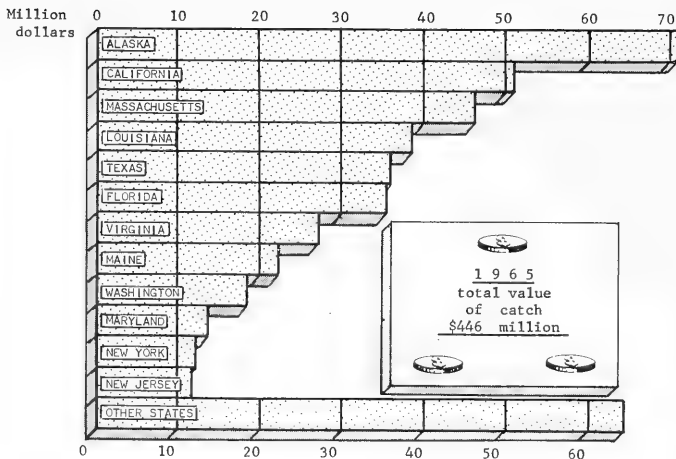

U.S. Supply. The total supply of fishery products (live-weight basis) declined from 12.0 billion pounds in 1964 to 10.5 billion in 1965, principally because of reduced imports of fish meal. The U.S. catch was 4.8 billion pounds--up 235.0 million from the previous year. Imports of 5.7 billion pounds accounted for 55 percent of the U.S. total supply, compared with 62 percent in 1964 and 58 percent in 1963. The supply of edible fishery products was a record 5.2 billion pounds and, for the first time, one-half the edible supply came from imports.

World catch. The world commercial catch of fish, crustaceans, mollusks, etc., was a record 115.5 billion pounds (live-weight basis) in 1965--1.7 billion more than in 1964. Peru for the fourth consecutive year had the largest catch. The United States remained in fifth place. There was little change in the relative position of the various countries.

Other information. Detailed summaries of the catch and operating unit data for the United States have been previously published in Current Fishery Statistics No. 4398.

Summaries of operating unit and catch statistics for each region of the United States have been published in the Current Fishery Statistics series of bulletins. "Fisheries of the United States", a preliminary review available each April, contains current information on many aspects of the fisheries, such as domestic and world catch, per capita consumption, price indexes, foreign trade, supplies, etc.; and comparative data for previous years. This publication may be obtained from the Office of Information, U.S. Fish and Wildlife Service, Washington, D.C. 20240.

WORLD CATCH OF FISH, CRUSTACEANS, MOLLUSKS, ETC., BY COUNTRIES, 1965

GENERAL REVIEW

U. S. CATCH - LIVE WEIGHT BASIS

In the annual digest it has been the practice of the Bureau to show the catch of univalve and bivalve mollusks on the basis of the weight of meats. Insofar as possible, all other fish and shellfish items are shown on a live weight basis.

Since world fishery statistics published by the Food and Agriculture Organization of the United Nations represent the live weight of the catch for all items of fish and shellfish, it has been necessary to provide that organization with information on the domestic catch of all species on a live weight basis. Data released by the Food and Agriculture Organization, therefore, indicate that the 1965 U.S. catch was 1.2 billion pounds greater than the figure appearing in Bureau publications. The increase is due to the inclusion of the weight of the shells of univalve and bivalve mollusks in the Food and Agriculture Organization data.

There is included in this report a table showing the entire domestic catch on a live weight basis. Information is also published on the catch of fishery products in the principal countries of the world so that the relative importance of the domestic fisheries can be determined. Tables containing these data follow:

WORLD CATCH OF FISH, CRUSTACEANS, MOLLUSKS, ETC., BY COUNTRIES, 1965

The 1965 world commercial landings of fish, crustaceans, mollusks, etc., were a record 115.5 billion pounds, according to the "Yearbook of Fishery Statistics, 1965" released by the Food and Agriculture Organization of the United Nations. The landings were 2 percent more than the 1964 production of 113.8 billion pounds.

Five nations accounted for 53 percent of the 1965 world catch. Peru, with 14.2 percent, continued to lead for the fourth consecutive year with landings of industrial fish (anchoveta) used primarily for fish meal. Japan (13.1 percent) was second, followed by China (Mainland) with 11.1 percent. The Union of Soviet Socialist Republics was fourth (9.5 percent) and the United States, fifth (5.2 percent).

Asia accounted for 38 percent of the world landings, followed by Europe (21 percent); South America (17 percent); Union of Soviet Socialist Republics (10 percent), North America (8 percent), and Africa (6 percent). An insignificant percentage was taken in Oceania.

GENERAL REVIEW

PROCESSED FISHERY PRODUCTS, 1965

The production of processed fishery products (canned, packaged fresh and frozen, cured, and industrial) in the United States, American Samoa, and Puerto Rico was valued at a record \$1.1 billion in 1965. This was an increase of 16 percent compared with the previous year. Canned products accounted for 44 percent of the total value; packaged fresh and frozen, 44 percent; cured, 5 percent; and industrial products, 7 percent. The Pacific Coast States led in production with products valued at \$405.2 million followed by the Gulf States, \$208.0 million; New England States, \$149.2 million; and the Middle Atlantic States, \$97.3 million. There were 86,864 persons directly employed in 4,185 wholesaling and processing establishments.

The pack of canned fishery products was 38.3 million standard cases (1.1 billion pounds) valued at \$495.2 million--an increase of 2.6 million cases and \$58.6 million. Fresh and frozen packaged fish and shellfish (filets and steaks, fish sticks and portions, shrimp and other shellfish products, specialty dinners, etc.) had spectacular growth in 1965 and were valued at a record \$485.7 million. Production of cured fishery products was 74.4 million pounds valued at \$54.2 million compared with 65.5 million pounds valued at \$47.8 million in 1964. Industrial products were valued at \$82.8 million in 1965--an increase of \$12.9 million compared with 1964. Production of processed fishery products includes items manufactured from raw products imported from foreign countries. Certain items, such as salted alewives, cured salmon, steamed oysters, etc., are shown in an intermediate and also a more advanced stage of processing. Production cannot be correlated directly with the domestic catch.

VALUE OF PROCESSED PRODUCTS, 1965

Pacific Coast
\$405 million

Atlantic Coast
\$364 million

= \$8 million.

Gulf Coast
\$208 million

Other Areas
\$141 million

CANNED FISHERY PRODUCTS, 1965

The pack of canned fishery products by 318 plants in the United States, American Samoa, and Puerto Rico was 38.3 million standard cases (1.1 billion pounds) valued at \$495.2 million to the packers--an increase of 2.6 million cases and \$58.6 million compared with 1964. The gain resulted principally from a record pack of canned tuna and larger packs of Maine sardines, clam products, animal food, and shrimp. The packs of canned salmon, mackerel, Pacific sardines, and oysters were smaller than in the previous year.

The pack for human consumption (749.5 million pounds) and for bait and animal food (372.1 million) increased 7.4 million and 18.7 million pounds, respectively, compared with 1964. The value of three items--salmon, tuna, and animal food--accounted for 81 percent of the total value received by producers of canned fishery products. Animal food containing less than 10 pounds of fish per standard case of 48 pounds (4,352,094 standard cases valued at \$20,265,747) has been excluded.

Tuna:--The pack of canned tuna was a record 18.1 million cases (358.4 million pounds) valued at a record \$233.0 million--a gain of 409,800 cases (8.6 million pounds) and \$15.4 million compared with 1964. The Pacific Coast States led in production with 60 percent of the pack followed by Puerto Rico, 27 percent; Hawaii and American Samoa, 10 percent; and Atlantic Coast plants, 3 percent. In 1965, areas other than California accounted for 50 percent of the tuna pack, whereas in 1955 they accounted for only 17 percent. The increase was primarily the result of greater production at Puerto Rico plants--partially caused by the development of the Atlantic tuna resource.

Salmon:--The pack of canned salmon was 3.6 million cases (174.4 million pounds) valued at a record \$122.7 million--a decline of 125,600 cases but an increase of \$27.0 million compared with the previous year. The higher value resulted from the phenomenal run of red (sockeye) salmon into Bristol Bay which produced one of the largest packs of these fish in recent years. Red salmon production also improved in other areas of Alaska.

Sardines:--The pack of canned Pacific sardines (8,316 cases valued at \$71,267) was the smallest on record. It reflected the drastic decline of a fishery that was once the largest in the United States. More than 1.5 billion pounds of Pacific sardines were landed in 1936, when the fishery was at its peak.

The pack of canned Maine sardines (sea herring) was 1.3 million cases valued at \$10.9 million. Despite an increased production of 401,152 cases compared with 1964, it was not considered a successful season. In 1965, sardines were packed on a year-round basis for the first time in many years.

Mackerel:--The canned pack of mackerel (703,447 cases valued at \$5.0 million) was 367,376 cases less than in 1964. Jack mackerel accounted for 92 percent of both the volume and value of the pack. Ex-vessel price disputes, stormy weather, and small landings were responsible for one of the lowest packs in recent years.

Shrimp:--The pack of canned shrimp was 2.3 million cases (24 cans to a case, each case containing 4-1/2 ounces of meats) valued at \$20.7 million--an increase of 1.7 million cases and \$7.7 million compared with 1964. Production of canned shrimp was greatly expanded in Gulf Coast plants in 1965. Smaller Gulf shrimp (in the sizes preferred by canners) were relatively plentiful and canners took advantage of the abundance to produce a large pack. The Alaska pack of shrimp was also greater than in the previous year.

Clams:--The pack of canned clams and clam products was 2.6 million cases valued at \$18.1 million--a gain of 258,000 cases and \$140,300 compared with the previous year. In 1965, whole and minced clams accounted for 24 percent of the volume and 39 percent of the value of the U.S. pack.

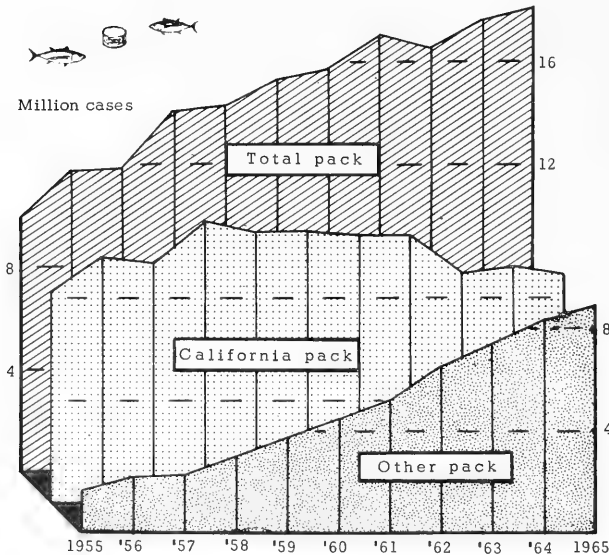

GENERAL REVIEW

Crabs--The pack of canned crab meat was 468,656 cases valued at \$14.7 million--131,863 cases and \$6.1 million more than in the previous year. The blue crab meat pack (61,693 cases) increased 24 percent compared with 1964, as a result of improved fishing along the Atlantic and Gulf coasts. In Alaska, the pack of king crab meat (327,107 cases valued at \$10.8) was 39 and 83 percent greater, respectively, than in 1964. Large quantities of frozen king crab meat and crab legs were sent to both domestic and foreign markets in 1965.

Oysters--The canned oyster pack of 288,000 cases was 134,000 cases less than in 1964 and the lowest pack since 1945. The value of the pack, \$3.7 million, declined \$1.6 million compared with the previous year. Production of oyster specialties (smoked, stew, bisque, and soup) was 154,942 cases--38,816 cases less than in 1964.

Animal food--The pack of canned animal food containing 10 pounds or more of raw fish per standard case (48 one-pound cans) was 7.7 million cases valued at \$46.8 million--a gain of 5 percent in volume and 8 percent in value compared with 1964.

U.S. CANNED TUNA PACK, 1955-65

INDUSTRIAL FISHERY PRODUCTS, 1965

The production of industrial fishery products by 155 plants in the United States, American Samoa, and Puerto Rico was valued at \$82.8 million--an increase of \$12.9 million compared with 1964.

Marine animal scrap and meal:--Production of 254,051 tons of marine animal scrap and meal was 8 percent larger than in the previous year. Menhaden scrap and meal production increased from 160,349 tons in 1964 to 175,959 tons in 1965. The gain resulted principally from a moderate increase in menhaden landings along both the Atlantic and Gulf coasts. Only New York and North Carolina reported smaller landings. Imports of fish meal, 270,666 tons, declined 168,477 tons (38 percent) compared with 1964. Likewise, the total supply (domestic production plus imports), 524,717 tons, was 149,678 tons (20 percent) less than in 1964, the record year.

Marine animal oil:--Domestic production of marine animal oil increased from 180.2 million pounds in 1964 to 195.4 million in 1965. Menhaden oil production was 175.2 million pounds--a gain of 17.5 million compared with the previous year. Exports of fish oil were 103.8 million pounds compared with 151.5 million in 1964.

Fish solubles:--The production of solubles was 94,840 tons--2 percent more than in the previous year. There was no production of homogenized condensed fish in 1965.

Other industrial products:--Products from oyster shells and buttons from fresh-water and marine mollusk shells were valued at \$5.6 million--a decrease of \$615,900 compared with the previous year.

Other industrial items produced included agar-agar, fish feed pellets and animal feeds, Irish moss extract, kelp products, fish leather, fish fins, liquid and dry fertilizer, colored chips, pearl essence, and crab shells worth \$20.8 million. In 1964, these products were valued at \$16.7 million.

U. S. SUPPLY OF FISH MEAL, 1960-65

GENERAL REVIEW

PACKAGED FISHERY PRODUCTS, 1965

The production of fresh and frozen packaged fish fillets and steaks in the United States, excluding Alaska and Hawaii, was 168.8 million pounds valued at \$66.3 million--an increase of 7.7 million pounds and \$9.0 million compared with 1964.

Flounder fillets (49.6 million pounds), haddock fillets (40.2 million), and Atlantic ocean perch fillets (22.7 million pounds) continued to be the leading items. They accounted for 67 percent of the volume and 64 percent of the value. Cod fillets, Pacific ocean perch fillets, and halibut steaks were among other important leading items. The New England area continued to lead all other areas in the production of packaged fish with 64 percent of the volume and 59 percent of the value.

Data on the production of packaged fish during 1965 have been published previously in Current Fishery Statistics No. 4055.

GENERAL REVIEW

FROZEN FISHERY TRADE, 1965

The 1965 production of frozen fish and shellfish by firms reporting monthly to the Bureau of Commercial Fisheries was 366.8 million pounds. Leading products frozen were shrimp (107.0 million pounds); bait and animal food (76.2); fillets and steaks consisting mainly of ocean perch and haddock (48.2); whiting, headed and gutted (29.6); and dressed halibut (28.8 million pounds). An estimated 623.4 million pounds of fish and shellfish (live weight) were required to produce the 366.8 million pounds of frozen fishery items. Not included were freezings by cold storage plants not reporting to the Bureau and a considerable volume of frozen fillets and steaks produced by firms operating plate freezers at the end of fillet production lines. Data assembled in the packaged fish survey for 1965 indicate that about 21.3 million pounds (an estimated 61.9 million pounds, live weight) of fillets and steaks were frozen by these firms.

New England led all other areas in freezings with 138.3 million pounds (38 percent of the total), followed by South Central with 85.7 million pounds; Alaska, 48.0; Pacific, 45.8; and the South Atlantic area, 41.2 million pounds. The Middle Atlantic, North Central East, and North Central West accounted for the remainder.

Information on the freezings and holdings of fishery products for 1965 by firms supplying monthly data on their operations and a list of these firms were published previously in Current Fishery Statistics No. 4054. Data on freezings and holdings were also published in the preliminary monthly bulletin, Frozen Fish Report, and in the final monthly report, Frozen Fishery Products, which are also in the Current Fishery Statistics series.

COLD STORAGE HOLDINGS OF SHRIMP, 1962-65

(By months - as reported on last day of month)

COLD STORAGE HOLDINGS OF FROZEN FISHERY PRODUCTS, 1965

Holdings of frozen fishery products were highest on November 30, when 232.1 million pounds were in storage. The October 31 holdings of 230.6 million pounds were second highest, followed by the December 31 and September 30 holdings of 229.9 and 227.8 million pounds, respectively. Holdings were lowest on April 30, when they totaled only 136.9 million pounds.

COLD STORAGE HOLDINGS OF CURED FISH, 1965

Monthly average holdings of salted and smoked fish were 10.5 million pounds. Cured herring (5.0 million pounds) and mild-cured salmon (3.3 million pounds) accounted for 79 percent of the average cold storage inventories of cured fish.

FOREIGN FISHERY TRADE

U.S. foreign trade in fishery products was valued at \$670.4 million in 1965--an increase of \$41.9 million compared with 1964. Imports for consumption were \$600.9 million, and exports, \$69.5 million. The value of imports was \$36.6 million more than in 1964, while exports increased \$5.3 million.

Imports of edible fishery products were 1.4 billion pounds, valued at \$479.4 million--an increase of 6 percent in volume and 11 percent in value compared with 1964. The gain was principally the result of larger receipts of fresh and frozen sea herring, groundfish blocks and slabs, and shrimp. Other important edible items received in considerable volume in 1965 were fresh and frozen halibut, tuna, groundfish fillets, flounder fillets, swordfish fillets, lobsters (common and spiny), sea scallop meats, canned sardines, canned tuna in brine, and pickled or salted cod, haddock, hake, pollock, and cusk.

Value-wise, shrimp was the major item imported--accounting for 24 percent of the value of imported edible items in 1965. About 162.9 million pounds (including fresh and frozen, canned, and cured) valued at \$113.8 million were received from 62 countries. Mexico, India, and Panama were among the principal sources. Mexican shrimp accounted for 37 percent of the total imports of shrimp.

Imports of nonedible fishery products were valued at \$121.5 million in 1965--a decrease of \$9.1 million compared with the previous year. The decline occurred principally in the value of imports of fish meal and scrap.

Exports of domestic edible fishery products were 96.4 million pounds valued at \$49.3 million--an increase of 2 percent in quantity and 15 percent in value compared with 1964. The value of nonedible exports of domestic fishery products (\$20.2 million) declined \$1.2 million. Exports of foreign-produced fishery products in 1965, were \$10.3 million compared with \$9.4 million in the previous year.

^{1/} EFFECTIVE WITH THE STATISTICS FOR JANUARY 1965, THE 1965 EDITION OF SCHEDULE B (STATISTICAL CLASSIFICATION OF DOMESTIC AND FOREIGN COMMODITIES EXPORTED FROM THE UNITED STATES) SUPERSEDED THE JANUARY 1, 1958 EDITION OF SCHEDULE B. THE PRINCIPAL EFFECT OF THIS CHANGE IN REPORTING HAS BEEN AN UNAVOIDABLE BREAK IN THE HISTORICAL AND CURRENT SERIES OF STATISTICS ON EXPORTS OF FISHERY PRODUCTS CAUSED BY REVISIONS IN EXPORT COMMODITY CLASSIFICATIONS. IN SOME INSTANCES, THERE WERE DIRECT CORRELATIONS BETWEEN THE OLD AND THE NEW CLASSIFICATIONS; HOWEVER, THERE WERE NO APPARENT CORRELATIONS FOR OTHER CLASSIFICATIONS. A NUMBER OF FISHERY ITEMS DESCRIBED IN THE 1958 EDITION OF SCHEDULE B LOST THEIR IDENTITY WHILE OTHER ITEMS NOT LISTED IN THE 1958 EDITION ARE DESCRIBED IN THE 1965 EDITION OF SCHEDULE B. THIS REPORT HAS BEEN REORGANIZED IN AN EFFORT TO RETAIN CONTINUITY IN THE BUREAU'S REPORTING OF HISTORICAL AND CURRENT STATISTICS OF FOREIGN TRADE IN FISHERY PRODUCTS.

^{2/} BECAUSE OF REVISIONS IN COMMODITY DESCRIPTIONS EFFECTIVE JANUARY 1, 1965, DATA FOR THIS ITEM ARE SHOWN ONLY FOR CALENDAR YEAR 1964. DATA FOR 1965 ARE INCLUDED WITH OTHER OR UNCLASSIFIED ITEMS.

^{3/} EFFECTIVE JANUARY 1, 1965, THESE TWO ITEMS WERE COMBINED IN A SINGLE CLASSIFICATION.

^{4/} INCLUDES PREPARED OR PRESERVED SPECIALTIES OTHER THAN CANNED, CASSEROLES, DINNERS, PICKLED, ETC.

^{5/} LESS THAN 500 POUNDS.

1/ INCLUDES BUREAU OF CUSTOMS DATA ON IMPORTS OF FRESH SEA HERRING INTO MAINE THAT AMOUNTED TO 117,992,850 POUNDS. BUREAU OF CENSUS DATA, WHICH DID NOT INCLUDE MOST ENTRIES VALUED AT LESS THAN \$250, AMOUNTED TO 29,146,897 POUNDS, VALUED AT \$591,274.

2/ INCLUDES LANDINGS OF FOREIGN-CAUGHT TUNA IN AMERICAN SAMOA. SUCH LANDINGS ARE NOT INCLUDED IN THE BUREAU OF CENSUS DATA BECAUSE OF THE TERRITORIAL SITUATION OF THE POSSESSION.

3/ LESS THAN 1,000 UNITS OR \$1,000.

SECTION 2 - NEW ENGLAND FISHERIES

The commercial fisheries of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) produced 702.2 million pounds of fish and shellfish worth \$74.8 million to the fishermen. Compared with 1964, this was an increase of 20.3 million pounds (3 percent) and \$7.2 million (11 percent). Among the species that declined in volume were ocean perch, yellowtail flounders, whiting, sea scallops, and lobsters. Increases occurred in landings of alewives, blackback flounders, sea herring, haddock, shrimp, soft clams, and unclassified fish for reduction. Prices paid to fishermen for nearly all major species of fish and shellfish increased in 1965.

Compared with 1964, landings were greater in all States except Massachusetts. That State, however, continued to lead in volume of the catch with 442.4 million pounds--63 percent of the New England total. Maine was second with 204.9 million (29 percent), followed by Rhode Island with 48.7 million pounds (7 percent). Connecticut, 4.9 million pounds, and New Hampshire, 1.3 million pounds, together supplied the remaining 1 percent.

Fishermen and vessels. There were 19,435 fishermen using 703 vessels of 5 net tons or greater and 10,817 other craft in the New England fisheries. These totals represented a decline of 759 fishermen and 18 vessels but a gain of 224 other craft compared with 1964.

Vessel construction. Eleven new vessels were added to the fleets operating out of the major New England ports. New Bedford received five of these, Gloucester, three, and Rockland, Portland, and Boston, one each. In addition, eight other vessels (six from Canada and two from France), all originally constructed in the United States, returned to fish from Maine and Massachusetts ports.

The first vessel to be approved for construction under the U.S. Fishing Fleet Improvement Act (P.L. 88-498) was the Victor, a steel side-trawler from New Bedford scheduled to begin fishing in 1966. The Act is designed to correct the inequities existing between fishing vessel construction costs in this country and in foreign countries. The U.S. Government is authorized to pay up to 50 percent of the cost of construction of a new vessel providing that the owner, the vessel, and the fishery in which it will be used meet certain requirements. The principal requirements are that the vessel be of advanced design, capable of harvesting fish stocks or areas not now fished, and that it operate in a fishery in which its use will not cause economic hardship to vessels already in that fishery. The Act authorizes the appropriation of \$10.0 million annually for 5 years.

The New England fleet lost 14 vessels in 1965, including one that was transferred out of the country. Ten fishermen lost their lives; eight of whom were aboard the Portland scalloper, Snoopy, which was blown up off the Virginia coast by a torpedo brought aboard in its dredging gear.

Processed fishery products. The value of processed fishery products in the New England States was \$149.2 million in 1965--an increase of \$31.1 million over 1964. Massachusetts accounted for 75 percent; Maine, 22 percent; and Rhode Island, New Hampshire, and Connecticut made up the remaining 3 percent. There were 532 wholesale and processing establishments operating in 1965 compared with 539 in 1964.

Legislation. The Commercial Fisheries Research and Development Act (Public Law 88-309) made available \$4,100,000 to start a program to improve the commercial fishery resources. Massachusetts was allocated \$246,000; Maine, \$223,000, Rhode Island, \$26,600; and New Hampshire, Vermont, and Connecticut, \$20,500 each.

Labor. There were no major labor-management problems in 1965. At Gloucester, increases of 21 cents an hour over a 2-year period went into effect at small plants. In Rockland, the companies signed new 2-year contracts with crew members and with shore plant employees. Existing agreements continued at all other ports.

Groundfish. Landings of the six groundfish species (cod, cusk, haddock, white hake, pollock, and ocean perch) were 272.8 million pounds worth \$20.9 million--a 4 percent decline in quantity but a 9 percent increase in value compared with 1964.

NEW ENGLAND FISHERIES

Imports of groundfish fillets (including blocks) were a record 295.0 million pounds--48.4 million pounds (20 percent) more than in the previous year. The available supply (U.S. production plus imports) of groundfish fillets and blocks in the United States was a record 371.9 million pounds in 1965.

Haddock. Haddock led in both volume and value among the finfishes landed at New England ports. Compared with 1964, the landings of 133.9 million pounds represented an increase of less than 1 percent. The value, however, reached a record \$13.6 million--15 percent more than in the previous year. The value reflected the general upward trend of prices paid for fishery products. Three ports accounted for 96 percent of the New England haddock landings. Boston was first with 65 percent, followed by Gloucester with 21 percent, and New Bedford, 10 percent. In 1965, large haddock accounted for 44 percent of the landings and scrod haddock, 56 percent. This was the reverse of the 1964 landings of 54 percent large and 46 percent scrod haddock.

Sea scallops. New England landings of sea scallops declined for the fourth consecutive year. Landings of 12.3 million pounds were 15 percent less than in 1964; however, the value (\$8.4 million) increased 5 percent. The average ex-vessel price per pound for the year was 68 cents--up 13 cents from the previous year. The sea scallop grounds at Georges Bank did not yield their usual large catches. More than 60 percent of the scallops landed at New Bedford, the leading scallop port, were taken from newly fished grounds off the Middle Atlantic and Chesapeake States.

Imports of sea scallops were 16.3 million pounds compared with 16.1 million in 1964, imports from Canada, 15.2 million pounds, were down 284,000 pounds from the previous year. Imports from the U.S.S.R. were 647,000 pounds.

Whiting. The whiting catch was the smallest since 1950. Whiting landings of 75.4 million pounds were 14 percent less than in the previous year; however, the value (\$1.9 million) was 8 percent more than in 1964--chiefly because the short supply of whiting created a seller's market. Despite the low production in other States, Maine whiting landings reached a peak 27.7 million pounds--principally the result of an enlarged fleet and greater fishing effort over an extended season. The Massachusetts catch was only 44.9 million pounds--down 13.2 million from 1964. Gloucester, the leading whiting port, had landings of 36.7 million pounds--down 17 percent from a year ago. Because no loss in fishing effort occurred because of price or wage disputes, all segments of the industry believed generally that the activities of foreign fishing vessels, primarily Russian, were the leading factor in the decline.

Yellowtail flounder. Yellowtail flounder landings of 76.6 million pounds were 2.7 million (3 percent) less than in 1964. The value, however, was a record \$7.1 million--33 percent more than in the previous year. Rhode Island landings of 5.6 million pounds were 2.6 million (32 percent) less than in 1964, because some of the Rhode Island fleet diverted their catches to New Bedford. Yellowtail flounder landings at New Bedford set volume and value records--66.0 million pounds worth \$6.3 million. The high prices received for these fish were largely the results of an expanding market and of generally higher prices for all fish and shellfish in 1965. Fishermen began to report "spotty" fishing, and there were some indications that the volume of the catch may not be maintained at its present level.

Ocean perch. The downward trend in ocean perch landings continued in 1965. The catch of 83.6 million pounds worth \$3.4 million was 6 percent less in volume and 10 percent less in value than in 1964. Despite the declining catch, the price paid for domestic ocean perch did not increase. Maine ports continued to receive a greater share of the landings--72 percent compared with 66 percent in the previous year. Rockland, Maine, was the leading port in volume of catch with 44 percent, followed by Portland, Maine, 28 percent, and Gloucester, Mass., 27 percent. The remaining 1 percent was landed at other New England ports. Ocean perch were plentiful on the fishing grounds, but their small size or the presence of the copepod parasite, *Sphyrion lumpi*, made processors reluctant to purchase them.

Imports of ocean perch fillets were 25.7 million pounds--12 percent more than in 1964.

NEW ENGLAND FISHERIES

Herring. Sea herring landings in Maine recovered only slightly from the low production of 1964. Maine landings of 70.2 million pounds were up 15 percent from the previous year but were the fourth smallest catch in the last 20 years in this State. Fishing, spotty most of the year, was best in the eastern section of Maine. The usually productive waters in and around Casco Bay in the western part of the State provided only meager supplies.

Twenty-three canneries processed 1.3 million standard cases of Maine sardines compared with about 900,000 standard cases processed in 1964 by the same number of firms. Imports of sea herring from Canada were 118.0 million pounds--20.7 million more than in 1964. Imports of canned sardines, including sea herring, were 53.0 million pounds compared with 53.7 million in the previous year. Weights reported in import data include the weight of the container and the product in the container and are therefore not directly comparable with the U.S. production reported in the table entitled "Summary of Production by Commodities, 1965" in the General Review section of this report.

Tuna. Tuna landings by purse seine vessels declined for the second consecutive year. Only 2.2 million pounds were taken--a decrease of 526,700 pounds compared with 1964. Most of the catch landed at New England ports was taken by small local vessels. The larger vessels landed most of their fish south of New England.

Soft clams. Soft clam landings of 3.2 million pounds were 20 percent larger than in 1964. Production was at the highest level since 1955--principally because of increased availability and better local demand.

Lobsters. Lobster landings of 28.5 million pounds were worth a record \$20.9 million--a decline of 3 percent in volume but a gain of 10 percent in value compared with 1964. Landings of otter-trawl caught lobsters (4.2 million pounds) were 51 percent more than in the previous year. The Maine catch, taken chiefly in pots, accounted for 66 percent of the New England production. Massachusetts and Rhode Island, with both pot and otter trawl catches, contributed 22 and 6 percent, respectively. The remaining 6 percent was divided almost equally between New Hampshire and Connecticut. Lobstermen using otter trawls had their most successful year because a large percentage of their lobsters, called "jumbos" (a lobster weighing more than 3 pounds), averaged 59 cents per pound. Pot fishermen averaged 76 cents for their catch. New Bedford led in otter-trawl landings with 2.0 million pounds.

Industrial fish. The 61.4 million pound landings of unclassified species of industrial fish for manufacture into meal and oil more than doubled the production of the previous year. Rhode Island landings reached 16.6 million pounds (up 15.3 million from 1964) when the Point Judith reduction plant was reactivated in September. Compared with 1964, landings at Gloucester, Mass., (8.9 million pounds), increased 6.3 million, and landings at New Bedford, Mass., (31.9 million) increased 13.6 million pounds. Landings of alewives (for reduction) by purse seiners were 6.3 million pounds compared with 4.0 million in the previous year. For the third consecutive year, no menhaden were landed by purse seiners at New England ports.

Shrimp. Maine shrimp landings of 2.1 million pounds worth \$243,000, more than doubled the volume of the previous year. This winter fishery is growing rapidly and may provide an important contribution to the fishing industry of Maine. After being landed "heads on", most of the shrimp are processed for freezing in a peeled, raw state in 1 to 3 pound packages. Two peeling machines are operating in Maine, but most processors are peeling by hand. The market for these excellent small shrimp is expanding each year.

Shore and plant development. In New Bedford, the \$18.0 million hurricane protection dike was completed. The barriers have not been tested by a hurricane but the dike is designed to ensure that both New Bedford and Fairhaven will be safe harbors. Work began on a development project designated as the South Terminal, which will be a waterfront industrial complex of piers and 19 acres suitable for fish processing concerns and cold storage plants. New Bedford recently completed the Maritime Terminal, a similar waterfront renewal project, which is now occupied by a large cold storage and fish processing plant.

NEW ENGLAND FISHERIES

The Gloucester waterfront was a scene of great activity as a result of Urban Renewal. There was demolition and ground leveling over a wide area in the center of the waterfront, and some dislocation of small fish and fillet concerns. There was no construction in the development in 1965; one large cold storage company, however, was granted space to build a plant.

Urban Renewal on the Boston waterfront had no immediate effect on the fishing industry. Plans for the proposed development, however, include the eventual relocation of 18 fish and shellfish concerns along Atlantic Avenue.

In Provincetown, studies continued on where and how to locate a proposed harbor refuge. One proposed plan was disapproved by the U.S. Army Corps of Engineers on the basis of benefit-to-cost ratio, but additional funds have been made available for further study.

Fishermen training program. Under its Manpower Development and Training Act, the U.S. Department of Labor sponsored three fishermen training programs at New Bedford. Of the 95 men who enrolled, 54 completed the course. A similar program was sponsored in Gloucester where 12 out of 38 students completed the course. None of the men who completed the training course at either port had any difficulty finding a job aboard fishing vessels.

Other information. The following tables contain summarized and detailed information on the 1965 operating units and landings of fish and shellfish in the New England States. Condensed summary data on the operating units and landings by States of the New England area, appearing on the following pages, have been previously published in Current Fishery Statistics No. 4330. Additional data on many aspects of the New England fisheries may be found in Maine, Massachusetts, and Rhode Island monthly and annual landing bulletins released by the Branch of Fishery Statistics and in daily, monthly, and annual reports published by the Bureau's Fishery Market News Office, Commonwealth Pier, Boston, Mass.

Acknowledgments. The following organizations assisted in collecting the data appearing in this section: Maine Department of Sea and Shore Fisheries; New Hampshire Fish and Game Department; Massachusetts Department of Natural Resources, Division of Marine Fisheries; Rhode Island Department of Agriculture and Conservation, Division of Fish and Game; Connecticut State Board of Fisheries and Game; and Connecticut State Shell Fish Commission.

NEW ENGLAND FISHERIES

LANDINGS AT MAINE PORTS

In cooperation with the Maine Department of Sea and Shore Fisheries, the Bureau of Commercial Fisheries collects and compiles monthly and annual data on the landings of fish, shellfish, and other aquatic resources in the State of Maine. This information is published monthly in "Maine Landings," which is in the Current Fishery Statistical series. Additional detailed tabulations are prepared for the use of Bureau and State scientists and the International Commission for the Northwest Atlantic Fisheries.

Maine landings data, summarized by species and months, appeared in Digests for the years 1947-58. In 1959, data were shown on the catch off Canada by species and area of capture. Information was also included on the number of fishing craft operated, trips, days absent, and days fished. Since 1960, similar data have been shown for most of the Maine catch, except sea herring, lobsters, sea scallops, and a small amount of other fish. The quantities shown represent the round weight of species except univalve and bivalve mollusks. These shellfish are reported in pounds of meats. The data are comparable with catch figures shown in other tables.

Landings at Maine ports by fishing craft of all sizes were 204.8 million pounds valued at \$21.9 million--a gain of 12.3 million pounds but a decline of \$36,000 compared with 1964. Major increases occurred in the catch of sea herring, 70.2 million pounds (up 9.3 million) and whiting, 27.7 million pounds (up 2.4 million). Compared with the previous year, the only substantial declines were in landings of lobsters, 18.9 million pounds (down 2.6 million) and haddock, 1.9 million pounds (down 1.1 million). Shrimp landings of 2.1 million pounds more than doubled the catch of the previous year. Taken during the usually unproductive winter months, shrimp are becoming an increasingly important part of the Maine fishing economy.

1/ EXCLUSIVE OF DUPLICATION. 2/ ALL SPECIES ARE LISTED AS LANDED WEIGHT EXCEPT UNIVALVE AND BIVALVE MOLLUSKS WHICH ARE REPORTED AS POUNDS OF MEATS. SEA SCALLOPS ARE LISTED AS WEIGHT OF EDIBLE MEAT.

NOTE: DAYS ABSENT IS THE MEASURE OF TIME, TO THE NEAREST COMPLETE DAY, THAT A VESSEL IS AWAY FROM PORT DURING A FISHING TRIP. WHEN A CRAFT OPERATES IN TWO OR MORE SUB-AREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE SUBAREA ON THE BASIS OF THE CATCH IN EACH SUBAREA. DAYS FISHED IS THE TIME ACTUAL FISHING OPERATIONS WERE CARRIED ON, EXPRESSED TO THE NEAREST TENTH OF A DAY. TO OBTAIN FISHING TIME IN HOURS, MULTIPLY THE NUMBER OF DAYS FISHED BY 24.

NEW ENGLAND FISHERIES

LANDINGS AT MASSACHUSETTS PORTS

Detailed statistics on landings at Boston, Gloucester, New Bedford, and other Massachusetts ports are collected and published monthly and annually in the Current Fishery Statistics series of bulletins. Additional detailed tabulations are prepared for the use of Bureau and State scientists and the International Commission for the Northwest Atlantic Fisheries. The data usually represent about 98 percent of the total Massachusetts catch. The figures do not include data on shellfish (except the landings of otter-trawl-caught lobsters, shrimp, squid, and sea scallop meats). Additional landings, not included in these data, consist mostly of crabs, pot-caught lobsters, clams, sea mussels, oysters, bay scallop meats, Irish moss, and small amounts of other fish, shellfish, and other marine organisms.

The following tables are a summary of 1965 data on Massachusetts landings by port, gear, and area of capture. Since the quantities shown are the weights as landed, they are not directly comparable with the catch figures that appear in other tables in this Digest.

Landings by fishing craft of all sizes at Boston, Gloucester, New Bedford, and other Massachusetts ports in 1965 were 408.7 million pounds valued at \$40.6 million--a decline of less than 1 percent in volume but an increase of 15 percent in value compared with 1964. New Bedford for the second consecutive year was the leading port in both landings and value, with 36 percent of the volume and 49 percent of the value. Gloucester was second in poundage, with 30 percent, but ranked third in value, with 17 percent. Boston had 25 percent of the landings and 29 percent of the value. Other Massachusetts ports accounted for the remainder.

Boston landings of 103.6 million pounds were down 4 percent compared with 1964, and were the smallest since 1919. The value, however, \$11.6 million, was 13 percent more than in the previous year. It reflected the general upward trend of prices paid for most groundfish, particularly haddock. Landings of haddock and haddock scrod, 75.6 million pounds, were 73 percent of the Boston landings. The proportion of large haddock to scrod haddock decreased sharply compared with the previous year. In 1965, large haddock was only 39 percent of the total; whereas, in 1964, large haddock and scrod haddock landings were nearly equal.

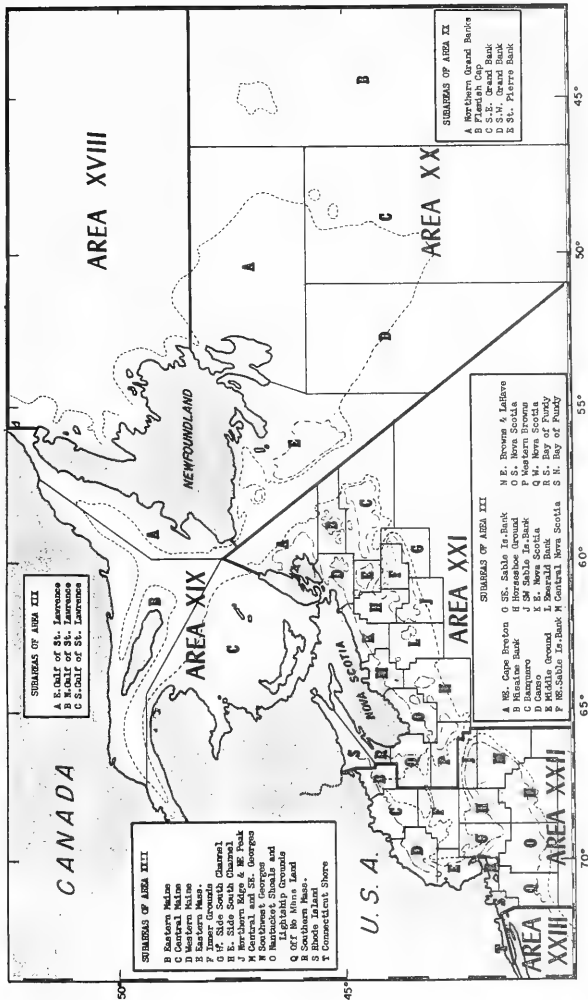

Gloucester landings (121.4 million pounds) were 2 percent less than in 1964, but the value, \$7.0 million, was 16 percent greater. The volume decline resulted from smaller catches of the leading species, ocean perch (22.5 million pounds) and whiting (36.7 million pounds)--down 23 and 17 percent, respectively, compared with the previous year. Landings of ocean perch at Gloucester were the smallest since 1937; and for the first time since the ocean perch fishery became established there, haddock landings were greater than those of ocean perch. There were 24.4 million pounds of haddock and haddock scrod landed in 1965, as the Gloucester fleet continued to place increasing emphasis on this fishery. The value of haddock landings, \$2.8 million, was 39 percent of the total.

Landings at New Bedford of 147.3 million pounds valued at \$19.8 million were 9 and 18 percent larger, respectively, than in 1964. Landings and value reached an alltime high. Yellowtail flounder landings also set volume and value records--66.0 million pounds valued at \$6.3 million. Sea scallops led in value of the New Bedford catch with \$7.7 million--9 percent more than in 1964. The 11.3 million pound catch, however, was 12 percent less than in the previous year. Sea scallops appeared to be scarce in waters adjacent to Massachusetts so most of the New Bedford scallop fleet relied for much of their catch on newly developed fishing grounds off the Middle Atlantic and Chesapeake States.

A total of 691 craft landed 408.7 million pounds of fish and shellfish at principal Massachusetts ports in 1965. Of these, 413 using otter trawls landed 372.3 million pounds (91 percent). Fifty-three scallop dredgers (11 less than in 1964) landed 12.0 million pounds (3 percent), and ten purse seiners, 11.8 million pounds (3 percent). The remainder was taken by line trawls, handlines, harpoons, longlines, floating traps, sink and drift gill nets, and pound nets. Fishing grounds off the New England States yielded 369.1 million pounds--90 percent of the landings. Grounds off Nova Scotia accounted for 6 percent. The remainder was taken off the Middle Atlantic States and in the Gulf of St. Lawrence. Only one trip was landed from the Grand Bank of Newfoundland during 1965.

NOTE:--THIS REPORT INCLUDES ALL LANDINGS IN MASSACHUSETTS EXCEPT THE INSHORE CATCH OF SHELLFISH, ETC., (PRINCIPALLY LOBSTERS, CLAMS, IRISH MOSS, SEA MUSSELS, AND BAY SCALLOPS) AND LESSER QUANTITIES OF FINFISH (ALEWIVES, STRIPED BASS, MACKEREL, ETC.). IN 1964, THE LANDINGS SHOWN ABOVE ACCOUNTED FOR 93.2 PERCENT OF THE MASSACHUSETTS TOTAL CATCH. THE WEIGHTS OF FISH REPRESENT THE FRESH FISH AS LANDED AND THE VALUES ARE THOSE RECEIVED BY THE FISHERMEN. THE GRADES OR SIZES GIVEN FOR CERTAIN SPECIES ARE THOSE RECOGNIZED IN THE TRADE. "WHALE" COD ARE CLASSIFIED AS THOSE WEIGHING OVER 25 POUNDS; "LARGE" COD, 10 TO 25 POUNDS; "MARKET" COD, 2-1/2 TO 10 POUNDS; AND "SCROD" COD, 1-1/2 TO 2-1/2 POUNDS. "LARGE" BLACKBACK FLOUNDERS, 1 TO 3-1/2 POUNDS; AND "SMALL" BLACKBACK FLOUNDERS, 3/4 TO 1 POUND. "LARGE" FLUKE, OVER 4 POUNDS; "MEDIUM" FLUKE, 3 TO 4 POUNDS; AND "SMALL" FLUKE, 1-1/2 TO 3 POUNDS. "LARGE" HADDOCK ARE THOSE WEIGHING OVER 2-1/2 POUNDS; "SCROD" HADDOCK, 1-1/2 TO 2-1/2 POUNDS; AND "SNAPPER" HADDOCK, UNDER 1-1/2 POUNDS. "LARGE" HAKE ARE THOSE WEIGHING OVER 6 POUNDS, AND "MEDIUM" HAKE, UNDER 6 POUNDS. THE FOLLOWING TERMS INDICATE THE CONDITION IN WHICH LANDED: "ROUND," AS CAUGHT; "DRAWN," Eviscerated; AND "DRESSED," Eviscerated AND HEADED. THE CATEGORY "OTHER MASSACHUSETTS PORTS" INCLUDES PLYMOUTH, PROVINCETOWN, AND OTHER CAPE COD PORTS.

1/ EXCLUSIVE OF DUPLICATION.

NOTE: ALL SPECIES ARE LISTED AS LANDED WEIGHT. LANDED WEIGHT OF FINFISH MAY BE CONVERTED TO ROUND WEIGHT BY MULTIPLYING BY THE FOLLOWING FACTORS: COD, DRAWN 1.17; COD, DRAWN 1.13; HADDOCK, DRAWN 1.14; WHITE HAKE, DRESSED 1.34; HALIBUT, DRAWN 1.15; POLLOCK, DRAWN 1.13; WHITING, DRESSED 1.66; AND WOLFFISH, DRAWN 1.20. THIS REPORT INCLUDES ALL LANDINGS IN MASSACHUSETTS EXCEPT THE INSHORE CATCH OF SHELLFISH, ETC., (PRINCIPALLY LOBSTERS, CLAMS, IRISH MOSS, SEA MUSSELS, AND BAY SCALLOPS) AND LESSEER QUANTITIES OF FINFISH (ALMIVEIS, STRIPED BASS, MACKEREL, ETC.). COMPARATIVE DATA ON NEAREST COMPLETE DATA PERIODS FOR THE YEAR 1964 ARE SHOWN FROM PORT DURING A FISHING TRIP. WHEN A CRAFT OPERATED IN TWO OR MORE SUBAREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE SUBAREA ON THE BASIS OF THE CATCH TAKEN IN EACH SUBAREA. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHEFLY WITH ANOTHER TYPE OF GEAR. DAYS FISHED IN THE TIME ACTUAL FISHING OPERATIONS WERE CARRIED ON, EXPRESSED TO THE NEAREST TENTH OF A DAY. TO OBTAIN FISHING TIME IN HOURS, MULTIPLY NUMBER OF DAYS FISHED BY 24.

NEW ENGLAND FISHERIES

176

SURVEY PROCEDURE IN THE NEW ENGLAND STATES

Statistical programs in the New England States are under the general supervision of the Bureau's regional office in Gloucester, Mass., with direct supervision by a regional supervisor for statistics also at Gloucester. The operation is carried on by field reporters at Rockland, Boothbay Harbor, and Portland, Me.; Boston, Gloucester, Provincetown, and New Bedford, Mass.; and Warren and Point Judith, R.I. They are specialists trained in obtaining and reporting fishery statistical data on a daily, monthly, and annual basis. Information on the volume and value of the catch by species, gear, and area of capture is obtained from fishermen and buyers of fish, shellfish, and other marine products. Special surveys are conducted for statistics on employment of fishermen, shoreworkers, fishing craft and gear, and the production of processed fishery products.

Catch. The fishery reporting specialists obtain daily individual trip data for all landings at their respective ports. They also interview a high percentage of trips for information on fishing effort and area of capture. These data are entered on punch cards for use in preparing monthly and annual tabulations of catch by species, gear, area of capture, and county where landed. Complete information on State landings is not always included because deliveries may be made at ports not covered daily. Information on these landings is obtained annually.

Maine. Each month, all areas in Maine, except Portland and Rockland, are canvassed by a Bureau representative and a State employee to obtain from each dealer and buyer a report on the quantity of fish, shellfish, and worms, by species, purchased from fishermen. These data are entered on punchcards at the same time as those for the major ports, thus providing complete information on Maine landings for the month.

Current cumulative tabulations of the monthly landings by area are maintained, and shortly after the end of each year, a revised tabulation is prepared listing by county and month all species taken during the year. Any revisions in the monthly data are included, and data on sea moss, which is shown only annually, are added.

Massachusetts. Daily information on Massachusetts landings is assembled for Boston, Gloucester, New Bedford, Plymouth, and Cape Cod ports. Detailed statistics are obtained on the volume and value of the catch for each vessel by species, gear used, and the subarea in which the catch was made. Additional detailed information on the time spent in fishing, depth fished, etc., is obtained for 12 study vessels.

Landings at the major ports in Massachusetts constitute about 98 percent of the total annual catch for that State. Species not covered are most shellfish (other than sea scallops and trawl caught lobsters) and some minor finfish species such as smelt, eels, and river-run alewives. Information on the catch of lobsters is obtained from annual reports which each fisherman is required to file with the State. Statistics on other shellfish and alewife catches are secured from town shellfish wardens. Data on the remaining species are collected by annual personal interviews with fishermen and dealers and are prorated to the area of capture and gear used. The information is forwarded to the Washington office to be machine processed with other figures for the State.

Rhode Island. Data to complete the monthly Rhode Island Landings bulletin are collected and tabulated each month in the fishery statistical office at Warren. Detailed information is assembled on daily landings at Point Judith and Newport. Cumulative tabulations are maintained on the monthly catch by county and by area. After the close of each year, a revised tabulation is prepared and issued as an annual Rhode Island Landings bulletin.

Connecticut. Landings data for Connecticut are obtained by an annual questionnaire which the State sends to each fisherman and by visits that the Bureau's employee stationed at Warren, R.I., pays to fishermen and dealers. At Stonington, a part-time employee records

NEW ENGLAND FISHERIES

177

individual vessel landings (hails). Daily information is obtained by the New York Fishery Market News office on shipments from Connecticut received on the market. These are tabulated at the Gloucester office. At the end of the year, data from these various sources are summarized by the Rhode Island field reporter, listed by county, prorated to area of capture based on interviews with fishermen and dealers, and entered on schedules which are forwarded to the Washington office for processing.

Summary. At the end of the year, all catch data are consolidated into summary tabulations for each State, by species, by county and gear. After being reviewed by the field staff and the Washington office, the tabulations are published.

Operating Units. A set of prepunched Bureau of Customs vessel cards containing the name of the vessel, the official number, the rig code, gross tons, length, and year built is furnished field reporters each year. Reporters interview the captains of the vessels to obtain area fished; number of crew; and number, type, and quantity of gear used in each fishery. The Gloucester office adds to the vessel punchcards the data on the crew and gear. The number of crew is the maximum number of crewmen aboard the vessel at any one time for each gear operated. Number and quantity of gear reported for each vessel is the greatest quantity used at one time. Gear ashore or carried aboard the vessel for replacement is not included. Machine tabulations of vessel landings provide information on the vessels that fished at major ports during the year. Throughout the year, field reporters prepare supplemental vessel lists for areas other than major ports, which are combined into one list at the end of the year. In detailed State operating unit tabulations, operating unit information on the number of men and craft is shown for each gear. In the summary for the State, however, they are shown only once.

Data on crew and gear are added to the vessel punchcards by the Gloucester office. Data relating to the operation of craft of less than 5 net tons and fishermen operating without boats are classified as the shore and boat fishery, and one or more cards are prepared for the total number of boats, etc., using each type of gear in each county.

The vessel, boat, and shore cards are punched at the Gloucester statistical office, processed by the Woods Hole tabulating unit, and returned to Gloucester, where operating unit tables are prepared. These tables are reviewed and corrected by area supervisors, who forward them to the Washington office. Any discrepancies are reconciled by field and central office personnel, and an annual summary entitled New England Fisheries is published.

Processed Fishery Products. Data on the production of processed fishery products are obtained monthly, quarterly, or annually through the use of questionnaires and followup visits where necessary. As the reports are received, they are checked for discrepancies and then forwarded to the Washington office. Summaries of the annual data appear in the Canned, Industrial, Processed, and Packaged Fishery Products bulletins.

Fish Sticks and Portions, and Breaded Shrimp. Data on the production of fish sticks and portions and breaded shrimp summarized on a monthly basis are collected quarterly by field reporters on forms (schedules) provided by the central office. The forms are mailed to producers at the end of each quarter, and if the forms are not returned, the firms are contacted by a field reporter. The information is published by the central office in a quarterly report entitled, Fish Sticks, Fish Portions, and Breaded Shrimp. At the end of the year, the data are summarized, figures are obtained on the value of the production, and an annual summary is published.

Fish Meal, Oil, and Solubles. Data on the production of fish meal, oil, and solubles are collected monthly by field reporters, who, on the first of each month, mail the data forms to each of the

NEW ENGLAND FISHERIES

178

meal producing firms in the area. The forms request production figures on meal, oil, and solubles; menhaden plants are also asked about the number of fish received. When completed forms are not returned, the field reporter obtains the data by telephone or in person. After review by field personnel, the reports are forwarded to the Washington office, where the data are tabulated and published monthly in a bulletin entitled Fish Meal and Oil. At the end of the year, the data for each firm are returned to the field for review and revision, if necessary, before being tabulated and published in the annual bulletins, Industrial Fishery Products and Fish Meal and Oil.

Freezings and Cold Storage Holdings. Collection of data on the monthly freezings and holdings of fishery products in New England is handled cooperatively by the Bureau and the U.S. Department of Agriculture. Statistical and market news personnel in New England obtain monthly freezings and storage figures from 33 firms in coastal areas. The Department of Agriculture conducts a mail canvass of five firms.

The figures are machine tabulated by the central office of the Branch of Fishery Statistics. National data on freezings and holdings are published in preliminary cold storage reports, which are released on the 15th of each month unless the date falls on a holiday or weekend. Summaries are issued by the Bureau's Fishery Market News offices and the Department of Agriculture. Final monthly reports are published by the Branch of Fishery Statistics, as well as an annual Frozen Fishery Products bulletin, which lists the firms that furnished information on the fishery cold storage activities.

Market News Reporting. A great deal of current fishery data appears in the Fishery Products Reports issued daily by the Boston and New York Fishery Market News offices. These reports show day-to-day fluctuations. Seasonal fluctuations can be determined by reviewing the monthly landings bulletins. The most complete annual data appear in the Statistical Digest, Fishery Statistics of the United States. Information on the catch by waters is not published but is machine processed and tabulations are furnished State and Federal laboratories along the New England coast.

NEW ENGLAND FISHERIES

179

NEW ENGLAND BIBLIOGRAPHY OF FISHERY STATISTICS

Federal fishery statistics have been collected by a number of agencies, including the Fish Commission, Bureau of Fisheries, Fish and Wildlife Service, and Bureau of the Census. The data have been published in several series of reports. Since funds for conducting statistical surveys have been limited, there has been wide variation in the frequency of the surveys in the various areas. This has made it difficult to determine the years in which data were available for the various sections, and also to locate the reports in which the results of surveys were published. The following bibliography was prepared to make it easier to locate the results of the various canvasses of the fisheries of New England. No attempt has been made to include those publications giving fragmentary or summary data only, or data on only certain fisheries or states. Unless otherwise noted, all are publications of the Bureau of Commercial Fisheries and its predecessor agencies.

(New Hampshire data missing)

For the years since 1946, statistical surveys have been published each year in Fishery Statistics of the United States.

SECTION 3 - MIDDLE ATLANTIC FISHERIES

180

Commercial landings of fish and shellfish in the Middle Atlantic States were 356.0 million pounds worth \$24.7 million--a decline of 4 percent in volume but an increase of 18 percent in value compared with 1964. Landings declined principally because of a 29-percent decrease in the catches of the recently developed industrial otter trawl fishery. The catches of menhaden, surf clams, and sea scallops increased markedly.

New Jersey was the leading producer of the Middle Atlantic States with 45 percent of the volume and 46 percent of the value, followed by New York with 41 percent and 50 percent, respectively; and Delaware, 14 percent of the volume and 4 percent of the value.

Fishermen and vessels. There were 8,839 commercial fishermen in the Middle Atlantic States--279 less than in 1964. The greatest decline was in the number of fishermen on vessels--a result of the reduced menhaden fleet. Commercial fishing craft in these States were 579 vessels (craft of 5 net tons and over), 4,025 motor boats, and 340 other boats. Compared with 1964, the 1965 fleet decreased by 29 vessels and increased by 10 motor boats and 41 other boats. According to records of the Bureau of Customs, 14 vessels obtained first documents as fishing craft in 1965.

Processed products. Processed fishery products in the Middle Atlantic States were valued at \$97.3 million--an increase of \$10.7 million compared with 1964. New York accounted for 41 percent; New Jersey, 35 percent; Pennsylvania, 19 percent; and Delaware, 5 percent. There were 488 wholesale and processing establishments operating in 1965 compared with 484 in 1964.

Legislation. The New York Conservation Department is preparing a program designed to assist the shellfish industry in Long Island Sound. A State law, effective January 1966, provides that State underwater lands are to be mapped and those suitable for shellfish culture leased to the highest bidder. Under the new plan, producers will be able to purchase clams taken from areas of possible pollution (where transplanting has been underway during the past 3 years) and place them in waters free from pollution for sufficient time to allow them to cleanse themselves.

Menhaden. Landings of 151.0 million pounds of menhaden were 11.8 million greater than in the previous year but far less than the 1956 peak production of 953.6 million pounds. The industry, anticipating a slow year, operated only four of the six plants in the area. Two of the firms processed other species of industrial fish for reduction to meal and oil to compensate for the lack of menhaden. Only 30 menhaden vessels fished in 1965 compared with 57 in 1964. Several menhaden vessels reportedly fished for alewives in New England waters.

Industrial otter trawl fishery. Despite the addition of several vessels to the industrial otter trawl fleet, the 87.1 million pound landings in this fishery were down 35.5 million compared with 1964. The decline occurred because industrial fish were scarce during the peak production period from May to October. Owners of menhaden plants showed increasing interest in the industrial otter trawl fishery--the main barrier to expansion, however, was lack of sufficient quantities of fish suitable for manufacture into meal and oil.

Tuna. The tuna season was a disappointment to fishermen. The catch reached only 1.3 million pounds--compared with 2.8 million in 1964. Since the inception of the tuna purse seine fishery in 1963, first landings have been made in June and the season has lasted nearly 3 months. In 1965, however, no fish were taken until mid-July and the last trip was completed August 1.

Fulton Market, New York City. Receipts of fresh and frozen fish and shellfish (other than landings by fishing craft) at Fulton Fish Market were 173.4 million pounds--6.7 million less than in 1964 but about the same as the average for the past 5 years. Receipts of finfish were 132.8 million pounds and shellfish, 40.6 million pounds. Massachusetts led all other States--supplying Fulton Market with 64.9 million pounds, a decline of 9.0 million from the previous year. New York was next with 25.8 million pounds--about 100,000 pounds less than in 1964.

MIDDLE ATLANTIC FISHERIES

181

Landings by fishing craft in 1965 were 5.7 million pounds--700,000 pounds less than in the previous year. It was the smallest quantity landed since the Bureau's Fishery Market News Service began recording these data in 1938. Forty vessels made 293 trips--192 scallop and 101 other trawl trips in 1965. During the previous year, 38 vessels made 336 trips--161 scallop, 174 other trawl, and 1 purse seine trip. The developing sea scallop fishery off the Virginia coast and the proximity of Fulton Market to the new grounds were responsible for the increased number of scallopers landing at Fulton Market. Compared with 1964, scallops brought generally higher prices all along the Atlantic seaboard.

Source: The Bureau's Market News Service, New York City.

Swordfish. Landings of a record 1.1 million pounds of swordfish more than doubled the previous year's production. Most of the catch was taken in the longline fishery, now in its fourth year, and landed at New Jersey ports. Five vessels had 90 percent of the catch.

Sea scallops. Extensive beds of sea scallops, originally discovered in 1915 off the Middle Atlantic and Chesapeake coasts, were fished by vessels from the Carolinas to Canada. Middle Atlantic landings of 4.8 million pounds of meats valued at \$3.1 million set both volume and value records. Most landings were made by out-of-State vessels which found New York and New Jersey ports convenient.

MIDDLE ATLANTIC FISHERIES

182

Surf clams. Landings of 43.8 million pounds of surf clam meats worth \$3.2 million were 5.7 million pounds and \$562,000 more than in 1964--record highs for both volume and value. Ninety-seven percent of the catch was landed in New Jersey ports by a fleet of 68 vessels--10 more than in the previous year. The record production was attributed to favorable weather, the discovery of new fishing grounds off Wildwood, N.J., and the absence of labor-management disputes.

Two devices, both in an experimental stage, were tried during the year: A suction pump was installed on a vessel to suck clams from the dredge while it was towed--eliminating emptying the clam dredge aboard ship. The other method was to install a clam shucking machine on a fishing vessel. If this experiment proves practicable it will permit greatly increased landings of clam meats per vessel per trip. Also, fewer employees will be needed in shore plants.

Hard clams. Production of 8.2 million pounds of hard clam meats was 6 percent more than in 1964, and the best catch since 1952. New York landings of 5.9 million pounds accounted for 73 percent of the Middle Atlantic catch.

A good supply of clams and high market prices encouraged casual fishermen in New York to be more active in the summer. There was little increase in dredging because quotas were placed on the boats to prevent harvesting more than could be marketed.

Transplant programs of the New York Conservation Department accounted for 21,000 bushels of hard clams removed from polluted to certified waters for purification and resale.

Oysters. Landings of 757,000 pounds of oyster meats (down 44 percent from 1964) were the smallest recorded for this area. The largest decline was in New Jersey where the catch of 523,000 pounds was about one-half the 1964 production. The decline occurred when the State failed to open the public seed beds at the mouth of the Delaware River. New Jersey landings accounted for 69 percent of the Middle Atlantic States oyster catch.

For the past 10 years the production of oysters from New Jersey waters has been governed by the amount of seed available from the State-regulated natural seed beds. Contrary to the usual custom of planting seed oysters on private grounds and allowing them to grow for 3 or 4 years prior to harvesting, it is necessary now to harvest them as soon as possible because of the high incidence of the MSX parasite in the growing area.

Further information. Condensed summary data on the operating units and catch, by States, appearing on the following pages have been previously published in Current Fishery Statistics No. 4331. Additional data may be found in the New York and New Jersey monthly and annual landing bulletins published in the Current Fishery Statistics Series by the Branch of Fishery Statistics in cooperation with the respective States. Information on daily, monthly, and annual production of fishery products in selected areas of these States is available in reports published by the Bureau's Fishery Market News Service at New York City.

Acknowledgments. The Bureau acknowledges the assistance of the following organizations in the collection of the data appearing in this section: The New York Conservation Department, Marine Fisheries Division, and Division of Fish and Game; New Jersey Conservation Department, Division of Fish and Game, New Jersey Shellfish Commission; State of Delaware, and Commission of Shellfisheries.

MIDDLE ATLANTIC FISHERIES

HUDSON RIVER SHAD FISHERY

The Hudson River run of shad yielded a commercial catch of 66,786 fish weighing 237,521 pounds, valued at \$35,929 to the fishermen. Compared with the previous year, this was an increase of 31 percent in poundage but a decline of 5 percent in value. Fishermen received an average price of 15 cents per pound for shad during 1965, compared with 21 cents the previous year.

There were only 94 fishermen in the Hudson River shad fishery--25 percent less than in 1964, following a downward trend that has continued since 1947, when there were nearly 1,200 shad fishermen. The catch has also declined generally from the 1944 peak production of 3,809,400 pounds.

Statistics on the 1965 operating units and catch of shad in the Hudson River by New York and New Jersey fishermen are included in the operating unit and catch data for those states.

MIDDLE ATLANTIC FISHERIES

MIDDLE ATLANTIC BIBLIOGRAPHY OF FISHERY STATISTICS

Federal fishery statistics have been collected by a number of agencies, including the Fish Commission, Bureau of Fisheries, Fish and Wildlife Service, and Bureau of the Census. The data have been published in several series of reports. Since funds for conducting statistical surveys have been limited, there has been wide variation in the frequency of the surveys in the various areas. This has made it difficult to determine the years in which data were available for the various sections, and also to locate the reports in which the results of surveys were published. The following bibliography was prepared to make it easier to locate the results of the various canvasses of the fisheries of the Middle Atlantic States. No attempt has been made to include those publications giving fragmentary or summary data only, or data on only certain fisheries or states. Unless otherwise noted, all are publications of the Bureau of Commercial Fisheries and its predecessor agencies.

For the years since 1946, statistical surveys have been published each year in Fishery Statistics of the United States.

SECTION 4 - CHESAPEAKE FISHERIES

223

Landings of commercially caught fish and shellfish at ports in Maryland and Virginia were a record 591.5 million pounds valued at a record \$40.2 million--an increase of 54.9 million pounds (10 percent) and \$4.2 million (12 percent) compared with 1964. Landings of alewives, butterfish, croaker, menhaden, sea bass, gray sea trout, shad, swelffish, blue crabs, sea scallop meats, and unclassified fish for reduction increased. The catch of scup, spot, and skipjack tuna declined.

Virginia with landings of 504.9 million pounds worth \$27.0 million accounted for 85 percent of the volume and 67 percent of the value. Maryland had the remainder of Chesapeake landings--86.7 million pounds worth \$13.2 million. The large difference in quantity resulted from the Virginia menhaden fishery, which supplied 70 percent of the State's catch.

Fishermen and vessels. There were 18,996 fishermen in the Chesapeake area--442 more than in 1964. Operating were 1,413 vessels of 5 net tons or more, 9,980 motor boats, and 991 other boats--up 196 from the previous year. Greater activity in the sea scallop and hard blue crab fisheries was principally responsible for the increase.

Fleet changes. Some significant changes occurred in the quantity and type of gear used. With State permission, Virginia fishermen used crab dredges to take conchs during the closed season on crabs. In the Maryland oyster fishery, a scarcity of oysters and a few conversions of dredges to yachts resulted in a decline in sail-powered oyster dredges from 61 in 1964 to 46 in 1965. The 414 crab scrapes used in the Chesapeake area were 186 less than in the previous year. The decline was caused by bad weather during the spring--the season when the gear is used most effectively. Scallop fishing increased markedly as the New England fleet moved in and began to fish the ground off the Middle Atlantic and Chesapeake States.

Labor. Employees of several Maryland soft clam packing plants were unionized during the year. Two plants had labor-management disagreements but were able to operate on a limited basis by employing non-union personnel. The disagreement was still in effect at the end of the year.

Crab and oyster packing plants, formerly exempt from paying the Federal minimum wage, had to comply with the Federal minimum wage law. Despite predictions that some firms would close because of higher labor costs, the plants continued to operate. Prices were adjusted where necessary to accommodate the increased cost. Efforts to use automation to decrease the cost of labor received added impetus with the development of machines to remove meat from the shells of cooked blue crabs. As part of its continued effort to assist this industry, the Bureau contracted for the development of Crabmac I and Crabmac II. Crab Lizzie I, a machine developed by a private firm was also being tested, but none of the machines was operational at the end of the year. Experimental engineering by a private firm on a machine to shuck fresh oysters was in progress.

Regulation. The controversy over taking soft clams in the Potomac River was decided in February when the Potomac River Fisheries Commission was given legal authority to regulate this fishery. A review of the controversy reveals that it began February 1964, when the State of Maryland reclassified many areas in the Potomac River as oyster reefs and thus eliminated them as soft clambeds. This action reconfirmed the Maryland survey of 1912, which classified these areas as oyster reefs. In the meantime, they had become unproductive and when the harvesting of soft clams was allowed in St. Mary's County in 1962, fishermen began taking soft clams. Oystermen complained, and the areas were closed to clamming.

In 1963, when the Potomac River Fisheries Commission was formed by agreement between Maryland and Virginia, the compact provided for regulating the taking of oysters, crabs, and finfish but, inadvertently, did not provide for the taking of soft clams. The newly formed Commission assumed that the Maryland ban on clamming was still applicable. One enterprising clam fisherman, however, decided to test the validity of the law and harvested clams in the so-called closed area. He was arrested, and the case went to court. The court ruled in favor of the fisherman, finding that no authority was given the Commission to regulate the taking of clams. Therefore, commercial clamming in the Potomac River was established early in 1964.

CHESAPEAKE FISHERIES

In June 1964, Maryland placed a 40-bushel daily limit on landing soft clams in the State; however, this limit did not apply to the Potomac River because the court had ruled that Maryland no longer had jurisdiction over it. Since this placed dealers and clam fishermen in other parts of Maryland at a disadvantage, a group of them brought suit against the State of Maryland, certain State officials, and some Potomac River dealers, asking to have the river closed to clamming, to prosecute all violators, and to collect a tax of 10 cents a bushel on all clams taken up to that time. The Commission declared itself a defendant in the case and in early August 1964 announced that the river would be closed to clamming. A court order enjoined the Commission from enforcing the closure until the court case brought by the Maryland dealers and fishermen was disposed of. In October 1964, the dealers and fishermen lost the case because the court decided that, under existing laws, there was no way to prohibit clamming in the Potomac River. Late in 1964, therefore, the Commission submitted to the legislatures of both States a proposal that would give the Commission authority to regulate the clam fishery. The proposal was approved in February 1965, and the Commission became the regulatory authority over the Potomac River soft clam fishery. A 40-bushel daily limit was placed on landings, and in certain areas clamming restrictions became effective. In May 1965, the Commission defined and delineated the areas, for taking soft clams. The Commission, however, still did not have the power to tax landings of soft clams. Plans are under way now to ask authority to tax all clams taken from the Potomac River.

Processed products. The value of processed fishery products in the Chesapeake States was \$66.4 million--an increase of \$1.1 million compared with the previous year. Maryland accounted for 55 percent and Virginia, 45 percent. There were 621 wholesale and processing establishments operating in 1965 compared with 622 plants in 1964.

Menhaden. The menhaden catch of 359.9 million pounds was 23.5 million more than in the previous year. It was the largest production since 1959 when 414.5 million pounds were landed. About 89 percent of the catch was made in Chesapeake Bay. Prices for menhaden meal and oil were at record levels in 1965 and despite fear of a declining resource the industry in Chesapeake Bay had a good year.

Oysters. The oyster fishery, the most valuable one in Chesapeake Bay, increased in value in 1965. Fisherman received \$16.7 million--\$891,000 more than in the previous year. The volume (21.2 million pounds), however, declined 910,000 pounds from 1964. The decline was sufficient to boost shucked oyster prices to an alltime high. Prices in January 1965, ranged from \$6.75 to \$7.50 per gallon for standards and \$7.75 to \$8.50 for selects. By December, the price had reached \$8.50 to \$9.00 for standards and \$9.50 to \$10.00 for selects. At no time during the year did prices generally recede.

CHESAPEAKE FISHERIES

Once again, a drought reduced the fresh-water runoff into the Bay, allowing higher salinities. Simultaneously the MSX disease began to encroach further upon the productive oyster areas. The States and the Potomac River Fisheries Commission planted oyster shells and seed in areas beyond reach of the disease, and the fishermen benefitted accordingly. Meanwhile, work continued on development of disease-resistant strains of oysters.

The James River seed oyster fishery continued to be fairly productive; however, this fishery has changed considerably in recent years. To have a ready sale to packing houses, the tongs now prefer to harvest the shucking-size stock rather than the much smaller seed. The Virginia Institute of Marine Science believes that harvesting these spawners is reducing the seed population of the James River.

The Virginia Commission of Fisheries opened for harvesting on an experimental basis two seed oyster areas. These areas (in the Piankatomank and Great Wicomico rivers) had been previously stocked by the State. The results were encouraging, and the State plans to continue the practice of planting shells for the production of seed oysters.

Blue crabs. The catch of hard blue crabs was a record 82.6 million pounds valued at \$6.2 million--a gain of 8.4 million pounds and \$1.2 million compared with the previous year. Prices for crab meat (f.o.b. Hampton, Va.) at the beginning of the year were slightly higher than in 1964. As usual, prices increased during January, February, and March, reaching new highs in the latter month--\$2.40 to \$2.75 per pound for backfin lump (compared with \$2.00 to \$2.35 in 1964). Regular and claw grades were correspondingly high.

■

Table 2.--Wholesale crab meat prices f.o.b. Hampton, Va., 1965

Source:--The Bureau's Market News Service, Hampton, Va.

On December 1, 1964, the beginning of the 1964-65 dredge season, the Virginia Commission of Fisheries set a limit of 30 barrels of crabs per day for crab dredges. At this time crab landings were heavy. They became very light, however, during February and March--resulting in high prices for crab meat. Crab landings increased and remained heavy from April through October. The year ended with crab meat prices slightly lower than in the previous year.

CHESAPEAKE FISHERIES

COMPARISON OF RECEIPTS OF CRABS AND CRAB MEAT FROM MARYLAND AND VIRGINIA AT FULTON MARKET, N. Y., 1964 and 1965

	Blue crabs		Crab meat	
	1965	1964	1965	1964
	Pounds		Pounds	
Maryland	960,800	731,700	27,700	34,700
Virginia	1,108,600	1,008,900	311,000	307,800

Soft clams. There were 7.9 million pounds of soft clam meats worth \$1.6 million produced in 1965--a decline of 290,000 pounds and \$72,000 compared with the previous year. Virginia entered this fishery for the first time and had 220,000 pounds of meats. This small harvest may be a portent because Virginia has a large, untapped supply of soft clams and market demand for soft clam meats is increasing.

Alewives. Landings of 38.3 million pounds of alewives were 10.3 million pounds more than in 1964 and reached the highest production level since 1951. The catch was the fourth largest on record. The record value of \$551,000 was \$35,000 more than in the previous year.

Scup. Landings of scup were 6.7 million pounds--4.4 million (40 percent) less than in the previous year. The decline could be partly attributed to a decline in effort. Fewer vessels made fewer trips; some of the craft shifted to the profitable scallop fishery.

The scup fishery is part of the so-called winter trawl fishery which reaches its peak between October and March. Small and medium-sized fish made up a large share of the 1965 catch. They averaged 7.7 cents per pound compared with 5.6 in 1964. Most of the catch was landed in the Hampton Roads, Va., area.

Longline fishery. There were 302,400 pounds of swordfish and 23,200 pounds of tuna taken with longlines in 1965--a decline of 333,000 and 99,600 pounds, respectively, compared with the previous year. The decline was caused primarily by high incidence of small swordfish (pups) in the 1965 catch. Twelve vessels operated longlines for swordfish in Virginia waters--five less than in 1964. The greater incidence of small swordfish caused dealers to market the catch by size classification: large (over 100 pounds), medium (40-100 pounds), and small (under 40 pounds).

Sea scallops. Scallop beds discovered by Bigelow and Welsh about 1915 off the Virginia capes and the lower Middle Atlantic area were intensively harvested for the first time in 1965. Although an occasional trip had been made to these grounds in recent years and trawlers had picked up a few pounds incidental to fish trawling, no serious attempt was made to fish them until 1965. During the year, 37 scallopers making 199 trips landed a record 2.8 million pounds of sea scallop meats worth \$1.7 million. This was an increase of 2.6 million pounds and \$1.6 million compared with 1964. This was only a small part of the total harvest of these beds; most of the scallop meats were landed at ports in New York, New Jersey, and Massachusetts.

Swellfish. Swellfish have been plentiful in the past few years. Record landings of 12.5 million pounds were up 7.4 million (144 percent) compared with 1964. Most of the catch was taken by pound nets in the spring of the year. Usually the fish are dressed, skinned, and sold on the fresh market, but the supply in 1965 exceeded the demand and many were frozen for future sale.

Tuna. The tuna catch of 858,000 pounds was 2.1 million pounds less than in the previous year. Only two tuna purse seine vessels landed in the Chesapeake area compared with five in 1964. The entire Atlantic coast tuna fishery declined in 1965 because the fish were scarce.

Other information. Condensed summary data on the operating units and catch, by States, appearing on the following pages, have been previously published in Current Fishery Statistics No. 4332. The catch of fish and shellfish in the bay and ocean areas of Maryland

CHESAPEAKE FISHERIES

and Virginia is shown at the end of this section. Additional data may be found in the Maryland and Virginia monthly and annual landing bulletins published by the Branch of Fishery Statistics in cooperation with the respective States. Information on the daily, monthly, and annual production of fishery products in selected areas of these States is available in reports published by the Bureau's Fishery Market News Office at Hampton, Va.

Acknowledgments. The following organizations helped collect the data appearing in this section: Maryland Department of Chesapeake Bay Affairs, Natural Resources Institute of the University of Maryland; Virginia Commission of Fisheries, Virginia Institute of Marine Science; and Potomac River Fisheries Commission.

CHESAPEAKE FISHERIES

265

POTOMAC RIVER SHAD AND ALEWIFE FISHERY

The Potomac River shad catch was 190,572 fish weighing 533,600 pounds, valued at \$54,057 to the fishermen. This was an increase of 17 percent in number, 13 percent in poundage, and 54 percent in value compared with 1964. Landings were the largest since 1957, when 624,400 pounds were taken, but they were much less than the 1922 record catch of 3.1 million pounds.

The catch of alewives in the Potomac River was 25.2 million fish weighing 11.5 million pounds, valued at \$163,938. Compared with 1964, this was a gain of 34 percent in number, 40 percent in volume, and 18 percent in value.

There were 463 fishermen in the Potomac River shad and alewife fisheries--a decrease of 23 compared with the previous year. Statistics on the catch and operating units of these fisheries are included in catch and operating unit data for Maryland and Virginia.

CHESAPEAKE FISHERIES

CHESAPEAKE BIBLIOGRAPHY OF FISHERY STATISTICS

Federal fishery statistics have been collected by a number of agencies, including the Fish Commission, Bureau of Fisheries, Fish and Wildlife Service, and Bureau of the Census. The data have been published in several series of reports. Since funds for conducting statistical surveys have been limited, there has been wide variation in the frequency of the surveys in the various areas. This has made it difficult to determine the years in which data were available for the various sections, and also to locate the reports in which the results of surveys were published. The following bibliography was prepared to make it easier to locate the results of the various canvasses of the fisheries of Chesapeake Bay. No attempt has been made to include those publications giving fragmentary or summary data only, or data on only certain fisheries or states. Unless otherwise noted, all are publications of the Bureau of Commercial Fisheries and its predecessor agencies.

For the years since 1946, statistical surveys have been published each year in Fishery Statistics of the United States.

SECTION 5 - SOUTH ATLANTIC FISHERIES

267

The commercial catch of fish and shellfish landed at ports of the South Atlantic States (North Carolina, South Carolina, Georgia, and the East Coast of Florida) including the commercial catch from fresh-water areas of Florida, was 356.7 million pounds valued at \$26.8 million--an increase of 20.7 million pounds and \$6.2 million compared with 1964. This was a record value for the South Atlantic area--\$3.3 million more than the previous record established in 1962. Good catches of alewives, flounders, mullet, shrimp, fresh-water catfish, and oysters accounted for most of the increase in the volume and value of landings. A decline in blue crab landings marred an otherwise bright economic picture in the commercial fisheries.

Landings increased in all States except North Carolina where a decline of 2 percent resulted from a poor menhaden season. East Coast of Florida landings were up 33 percent; South Carolina, 23 percent; and Georgia, 9 percent. The ex-vessel value of landings increased appreciably in each State, and new value records were established in North Carolina, South Carolina, and on the East Coast of Florida.

Fishermen and vessels. There were 10,688 commercial fishermen in 1965--593 less than in the previous year. Most of the decline occurred in North Carolina and was caused by two major factors: Fewer menhaden vessels fished North Carolina waters because fish were scarce, and low financial returns in most net fisheries forced fishermen to seek employment elsewhere. A total of 1,122 vessels (craft of 5 net tons and over) operated in the commercial fisheries--14 more than in 1964. The 5,751 other craft operated were 250 less than in the previous year.

Seventy-seven vessels obtained documents from the Bureau of Customs as fishing craft in 1965. Of this number, 20 were 5 to 19 gross tons; 25 were 20 to 89; 29 were 90 to 99, 2 were 100 to 109; and 1 was 120 gross tons.

Processed products. The value of processed fishery products in the South Atlantic States in 1965 was \$51.2 million--a decrease of \$1.3 million compared with the previous year. There were 443 wholesale and processing plants operating in 1965 compared with 423 in 1964.

Shrimp. Shrimp landings of 26.2 million pounds (heads on) were 8.8 million pounds more than in 1964 and the greatest since 1960. The larger landings brought the shrimp industry out of the depressed economic condition caused by the low productions of 1963 and 1964. Higher ex-vessel prices prevailed most of the year, and the value of landings increased 53 percent.

In North Carolina, landings of 5.4 million pounds were 1.1 million (27 percent) more than in 1964. Despite high ex-vessel prices, the value of landings increased only 14 percent because shrimp of smaller sizes comprised a greater proportion of the landings than in the previous year. Larger quantities of white shrimp were landed for the first time since 1961.

The economic condition of the South Carolina commercial fisheries improved as a result of the greater abundance of shrimp in local waters. Landings of 6.8 million pounds were 4.2 million more than in 1964, and the ex-vessel value of \$2.6 million was about three times larger. An excellent run of white shrimp during the fall accounted for most of the production increase.

Landings of shrimp at Georgia ports (8.6 million pounds) were 45 percent larger than in the previous year, and the value (\$3.4 million) was 49 percent more. As in South Carolina, an excellent run of white shrimp during the fall was the major factor contributing to increased landings. During the latter part of the year, several vessel owners began to dispose of their oldest, smallest vessels and reinvested in larger and more powerful new ones.

Shrimp landings of 5.4 million pounds along the East Coast of Florida were 20 percent greater than in 1964, while the value (\$2.4 million) increased 21 percent. The shrimp fishery has been fairly stable in this area, and fishermen have not been affected by the wide fluctuations in catch that have occurred in other South Atlantic States during the past 6 years.

SOUTH ATLANTIC FISHERIES

Menhaden. East Coast of Florida landings (31.7 million pounds) nearly doubled the 1964 catch and offset a continuing decline in North Carolina, the major production area. The increased catch on the East Coast of Florida was about commensurate with the increased number of vessels in the fishery--6 compared with 3 in 1964. The additional vessels fished for a processing plant reactivated at Fernandina Beach. North Carolina landings (160.6 million pounds) were 12.4 million less than in the previous year as a result of poor fishing in November and December, usually the months of heaviest production. A change in the age composition of fish caught in the fall of 1965 caused concern for the future of this fishery. One and two-year-old fish predominated in the catch; whereas in prior years, fish 3 years and older constituted most of the catch. Oil recovery was very low because of the large numbers of small, young fish caught.

Food finfish. The catch of finfish for human consumption was 75.1 million pounds compared with 58.3 million in 1964--a gain of 29 percent. The ex-vessel value (\$8.4 million) also increased 29 percent. There were substantial gains in landings of king mackerel, king whiting, mullet, shad, and Spanish mackerel; and moderate gains in sea bass, gray sea trout, and red snapper. Record landings of flounders (5.1 million pounds) and freshwater catfish (16.2 million pounds) were up 88 and 9 percent, respectively, compared with 1964. Most of the increase in flounder landings was the result of excellent catches made by double-rigged North Carolina trawlers during November and December. The most spectacular gain occurred in alewife landings (15.6 million pounds), which were more than double those of the previous year. Considerable quantities of the increased landings were diverted for use as bait rather than for human consumption. Of the 17 species that usually account for 90 percent or more of the volume and value of landings for food, only 5--bluefish, croaker, spotted sea trout, spot, and striped bass--declined in quantity. The most serious decline was in landings of spot, 3.0 million pounds--43 percent less than in 1964.

Longline fishery. The North Carolina longline fishery for swordfish, which began in 1964, captured 524,000 pounds valued at \$283,320--an increase of 9 percent in volume and 22 percent in value compared with the previous year. The average price per pound was 6 cents more than in 1964. The catch was landed by 15 vessels making 122 trips to North Carolina ports--a decline of 14 vessels and 1 trip compared with 1964. Greater numbers of small swordfish caused dealers to market the fish by size classification: large (over 100 pounds), medium (40-100 pounds), and small (under 40 pounds). Swordfish averaged 101 pounds per fish in 1965 compared with 142 pounds in the previous year.

Scallops. North Carolina fishermen landed sea, calico, and bay scallops in 1965. It was their first venture into the sea scallop fishery and they caught 92,000 pounds of scallop meats worth \$56,000. Three vessels landed catches taken from grounds 40 to 80 miles ENE. of Oregon Inlet. Vessels from Canada and New England also fished these grounds because scallops were scarce on Georges Bank.

The high prices for sea scallops prompted North Carolina fishermen to reactivate the calico scallop fishery. This fishery had not been active in North Carolina since 1961 when small quantities were landed by otter trawls--the gear fishermen found most efficient. Otter trawls were used again in 1965 to take the 871,000 pounds of calico scallops landed in North Carolina. The vessels returned to port each day with their catch, and the scallops were shucked ashore. So in addition to supplying revenue to fishermen, the scallops provided jobs for about 300 part-time shuckers. A machine to shuck and eviscerate calico scallops was being developed but had not been completed by the end of the year.

Bay scallop fishermen also had a good year. The catch of bay scallop meats (379,000 pounds) was 11 percent more than in 1964, and the value (\$196,000) was 13 percent more.

Blue crabs. Landings of blue crabs in all States were considerably less than in the previous year and total landings for the area (46.2 million pounds) were 11 percent less than the record 1964 production. Fewer crabs were available, but this was not the only reason for the reduced catch. For example, in North Carolina all crab meat plants were required to comply with the Federal minimum wage law from which they had been exempt. In protest, nearly all plants closed for about 3 weeks. Rather than fish for crabs, South Carolina fishermen preferred to catch shrimp, which were both abundant and high priced. In 1965,

SOUTH ATLANTIC FISHERIES

269

the crabs had a low yield of meat (because male crabs were scarce) which lessened the demand for them in shore plants. In Georgia, and to a lesser degree, along the East Coast of Florida, the water was unseasonably cold during the first 4 months of the year, consequently crab catches were small--landings in both States were about 1.0 million pounds less than in 1964.

Oysters. Oyster landings of 4.1 million pounds of meats increased 16 percent compared with 1964. The value (\$1.5 million) remained about the same as in the previous year. The landings in each State increased moderately. During the spring, the prices paid to fishermen declined because of unsettled markets. In South Carolina and Georgia there appeared to be a trend toward marketing oysters in the shell (usually sold by the sack) rather than as shucked oysters. After having been in business since 1914, one of the two oyster canners in South Carolina discontinued operations during the year.

Clams. Landings of 404,000 pounds of hard clam meats were about the same as in the previous year; however, the value, (\$171,000) was 12 percent greater. Compared with 1964, landings in North Carolina (313,000 pounds) and East Coast of Florida, (24,000 pounds) increased 58,000 and 23,000 pounds, respectively, and offset a 79,000-pound decline in South Carolina landings (67,000 pounds). The decrease in South Carolina clam landings resulted primarily from the fishermen's preference for the more profitable shrimp fishery. No offshore clams were harvested in North Carolina. The market was excellent most of the year, and the major processor, located in North Carolina, was occasionally hard pressed to meet market demands.

Fish kills. The South Carolina area was again plagued with a fish kill. In May, many dead and dying mullet, menhaden, and spot were found in Charleston Harbor and the lower reaches of the Ashley River. The kill continued sporadically until the end of June. It was investigated by several Federal and State agencies, but their findings had not been released by the end of the year.

Other information. Condensed summary data on the operating units and catch of the South Atlantic section appearing on the following pages have been previously published in Current Fishery Statistics No. 4333. Seasonal variations in the catch of fish and shellfish in North Carolina, South Carolina, Georgia, and Florida can be ascertained from the monthly and annual landing bulletins issued for each of these States. Additional data on many aspects of the South Atlantic fisheries may be found in the daily, monthly, and annual reports published by the Hampton, Va., Fishery Market News office of the Bureau.

Acknowledgments. The following organizations assisted the Bureau to collect the data appearing in this section: North Carolina Department of Conservation and Development, Division of Commercial Fisheries; South Carolina Wildlife Resources Department, Division of Commercial Fisheries; Georgia Game and Fish Commission, Coastal Fisheries Division; and Florida State Board of Conservation.

NOTE:--THE CATCH OF 11,391,600 POUNDS OF CATFISH AND BULLHEADS (VALUED AT \$1,822,656) AND 405,000 POUNDS OF SOFT-SHELL TURTLES (VALUED AT \$25,314) TAKEN FROM THE INLAND LAKES IS INCLUDED WITH THE CATCH FOR THE EAST COAST OF FLORIDA. FOR THE PURPOSE OF THIS REPORT THE "EAST COAST OF FLORIDA" INCLUDES THE COASTAL COUNTIES FROM NASSAU TO DADE, INCLUSIVE, WHILE THE "WEST COAST OF FLORIDA" INCLUDES THOSE FROM MONROE TO ESCAMBIA, INCLUSIVE.

FLORIDA CATCH OF LEADING SPECIES, 1965

SOUTH ATLANTIC SHRIMP FISHERY

Landings of 16.7 million pounds (heads-off) were the greatest since 1960, and surpassed those of the previous year by 5.7 million pounds (52 percent). The ex-vessel value --\$10.2 million--was \$3.5 million (53 percent) larger than in 1964. An excellent market demand, in spite of higher prices, enabled dealers to pay high ex-vessel prices throughout most of the year. The increased landings were a welcome change from the low production of 1963 and 1964. The major factor in improved catches in all States was the greater abundance of white shrimp.

In North Carolina a slight decline in landings of pink shrimp was compensated for by increased catches of brown and white shrimp. This was the first time in many years that white shrimp had been taken in North Carolina in substantial quantities. Total landings increased 27 percent over the previous year, and the ex-vessel value increased 14 percent. The gain in value was not commensurate with the volume increase because the landings had a greater proportion of small shrimp than in the previous year.

South Carolina shrimp landings established a new value record. Increased abundance of white shrimp was responsible for the vastly improved economic condition in the commercial fisheries. The abundance of white shrimp continues to be the major factor in determining the economic success or failure of the commercial fisheries. Landings were 160 percent more than in the previous year; the dockside value was 200 percent more. The staff of the Bears Bluff Laboratory, Wadmalaw Island, S.C., theorized that mild temperatures during the winter of 1964-65 and a larger than usual wintering-over population of white shrimp were major factors in the increased landings. Commercial catch predictions by the Laboratory staff, based on postlarval sampling, continued to be accurate.

Shrimp landings at Georgia ports were 45 percent greater than in the previous year; the value was 49 percent greater. The increased volume was the result of an excellent white shrimp season. Count-size composition of landings changed somewhat as small shrimp (41-67 heads-off per pound) were 36 percent of the total, compared with 26 percent in 1964. Because of improved economic conditions, several vessel owners disposed of their craft and reinvested in new and larger vessels with greater horsepower engines.

Florida, East Coast fishermen also had a good year. Both volume and value of landings were 21 percent greater than in 1964. A slight decrease in landings of brown and royal red shrimp was more than offset by excellent catches of white shrimp.

The quantities shown in the following tables are heads-off weight of the shrimp and are not directly comparable with the volume data published in the General Review, regional tables, or the Review of Certain Major Fisheries, which represent the round weight of the catch.

The pounds of heads-off shrimp may be converted to heads-on (round) weight by multiplying brown by 1.61; pink, 1.60; white, 1.54; seabobs, 1.53; and royal red, by 1.80.

Detailed information on 1965 landings of shrimp in the South Atlantic States, by months for each State, was published in Current Fishery Statistics No. 4113.

NOTE:--ALL WEIGHTS ARE ON HEADS-OFF BASIS. THE SIZE INDICATES THE NUMBER OF HEADS-OFF SHRIMP TO THE POUND. TO CONVERT TO HEADS-ON WEIGHT MULTIPLY BY 1.61 FOR BROWN, 1.60 FOR PINK, 1.54 FOR WHITE, AND 1.80 FOR ROYAL RED. THE STATES LISTED REPRESENT THE STATES WHERE THE SHRIMP WERE LANDED REGARDLESS OF WHERE CAUGHT. THE NAMES OF THE SPECIES USED IN THESE TABLES ARE AS FOLLOWS: WHITE SHRIMP (MOSTLY *PENAEUS SETIFERUS*), BROWN SHRIMP (MOSTLY *PENAEUS AZTECUS*), PINK SHRIMP (MOSTLY *PENAEUS DUORUM*), SEA BOBS (MOSTLY *XIPHOPENAEUS KROYERI*), AND ROYAL RED (MOSTLY *HYMENOPENAEUS ROBUSTUS*). THE VALUE REPORTED IS THE AMOUNT RECEIVED BY THE OWNERS OR OPERATORS OF THE VESSELS FOR THE FIRST SALE AT THE DOCK. ANY EXPENSES INVOLVED IN HANDLING OR PROCESSING ASHORE ARE NOT INCLUDED, EVEN THOUGH CHARGEABLE TO THE VESSEL. THE SIZE REPORTED GENERALLY IS THAT USED AS OF THE FIRST SALE. SIZE GRADING IN VARYING DEGREES OF UNIFORMITY MAY OR MAY NOT OCCUR AT, OR PRIOR TO, THE TIME FIRST SALES ARE MADE. IF GRADING IS NOT DONE AT THIS TIME, THE SIZE REPORTED IS AN AVERAGE SIZE AND MAY INCLUDE SEVERAL SIZE CLASSIFICATIONS.

SOUTH ATLANTIC FISHERIES

SURVEY PROCEDURE IN THE SOUTH ATLANTIC STATES

Statistical programs in the South Atlantic States are under the general supervision of the Bureau's Regional Office in St. Petersburg Beach, Fla., and direct supervision of a Regional Supervisor stationed in New Orleans, La. Collection of data is carried out by Fishery Reporting Specialists trained in obtaining and reporting fishery statistical data. They are stationed in Beaufort, N.C.; Charleston, S.C.; Brunswick, Ga.; and Miami, Fla. Supervisory field personnel are also stationed in Beaufort, N.C. and Miami, Fla.

Catch Statistics: The collection of catch statistics is a joint venture of the Bureau of Commercial Fisheries and the States of North Carolina, South Carolina, Georgia, and Florida. Standard forms designed for the needs of each State, the Bureau, and industry are used to collect catch data in each State. Forms are mailed to dealers or buyers each month with a request that they be completed and returned by a specified date. The forms provide for reporting the pounds and value of the species purchased from fishermen, or caught by the producers' fleets. Forms not returned by the deadline date are picked up by Bureau or State employees. The data, which are tabulated for publication in monthly landings bulletins for the various States, show the volume of the catch of each species by county or district and the total value of each species.

When there are revisions in the monthly data already published, corrections are made in the cumulative totals in the current monthly bulletin. The revised figures for the individual months appear in the annual bulletin. Field reporting specialists interview fishermen and dealers to obtain annual information on the quantity of each species taken by the types of gear operated and the various bodies of water in which the catch was made. When the interviewing has been completed and the catch has been credited to the respective gears and water areas, an annual report is prepared on a specially designed form showing volume and value of the catch by species, gear, and area of capture. The forms are then forwarded to the Washington Office where the data are machine processed. The figures are reviewed in the Central office and by field personnel concerned with the survey. When all discrepancies have been reconciled, the data are published in a sectional summary in the Current Fishery Statistics series entitled "South Atlantic Fisheries" and, subsequently, in the Digest, "Fishery Statistics of the United States."

Data on the catch by water area for the South Atlantic States are not published. However, the information is machine processed and supplied to State and federal offices and laboratories in the area. Information on the catch by counties has not been published in the Digest since 1960. However, the data are prepared and copies of the tabulations are maintained in the Central office.

Operating Units: Field reporting specialists are supplied with a set of prepunched IBM vessel cards obtained from the Bureau of Customs. The cards are prepunched with the following information: name, official number, rig code, gross tonnage, length, and year built. The reporting specialist, through interviews, obtains data on the number of crew; and number, type, and quantity of gear utilized by the vessel during the year. The number and quantity of gear is the greatest quantity fished at one time. It does not include replacement gear aboard the vessel or ashore.

When the reporter has completed the entries on the vessel cards, they are forwarded to the Regional Supervisor who arranges for the punching and tabulating of the data. The tabulations are then forwarded to the reporter who prepares operating unit tables for the State. Data on the shore and boat fishery (those craft of less than 5 net tons and fishermen operating without benefit of craft along the shore) which have been assembled by the reporter by personal interview and from State records are entered on the State operating unit tables in much the same manner as for the vessel fishery. Lists of boat and shore fishermen are usually maintained in the files of the reporter.

When all reconciliation of the data has been accomplished in the Region, the operating unit tabulations are forwarded to the Washington office. If discrepancies are discovered, these are reconciled. Summary operating unit data are then published in a section CFS bulletin entitled "South Atlantic Fisheries." These data and detailed information on the operating units by gear are published in the annual Digest. Information on the operating units by counties is prepared but has not been published in the Digest since 1960. Copies of the tabulations are prepared each year and are on file in the Central office.

Processed Fishery Products: Information on the production of processed fishery products (canned, fresh and frozen packaged fish and shellfish, "cured" items, and industrial

SOUTH ATLANTIC FISHERIES

fishery products) is obtained from processors through the use of especially designed questionnaires. Data are obtained on the monthly production of fish meal, oil, and solubles, fish sticks, portions, and breaded shrimp and published currently during the year. Statistics on the production of other processed products are obtained annually.

Individual monthly and annual reports are forwarded to the Washington office for tabulation and publication of the data. Monthly data are published in bulletins entitled "Fish Meal and Oil" and "Fish Sticks, Fish Portions, and Breaded Shrimp." The latter is released quarterly. Annual data are released in bulletins entitled "Canned Fishery Products;" "Industrial Fishery Products" (fish meal, oil, and solubles, etc.); "Packaged Fishery Products" (fresh and frozen fillets and steaks); and "Manufactured Fishery Products." The latter report contains a summary of the data contained in the monthly and annual processed bulletins and also information on the annual production of packaged shellfish and cured fishery products.

The Fishery Market News office in Hampton, Va., covers part of the North Carolina area on a daily basis. Persons interested in current day-to-day trends should consult that office. The monthly landings bulletins represent the best available information on a monthly and seasonal basis and the Statistical Digest represents the most complete annual data available in Bureau records.

SOUTH ATLANTIC FISHERIES

SOUTH ATLANTIC BIBLIOGRAPHY OF FISHERY STATISTICS

Federal fishery statistics have been collected by a number of agencies, including the Fish Commission, Bureau of Fisheries, Fish and Wildlife Service, and Bureau of the Census. The data have been published in several series of reports. Since funds for conducting statistical surveys have been limited, there has been wide variation in the frequency of the surveys in the various areas. This has made it difficult to determine the years in which data were available for the various sections, and also to locate the reports in which the results of surveys were published. The following bibliography was prepared to make it easier to locate the results of the various canvasses of the fisheries of the South Atlantic States. No attempt has been made to include those publications giving fragmentary or summary data only, or data on only certain fisheries or states. Unless otherwise noted, all are publications of the Bureau of Commercial Fisheries and its predecessor agencies.

Data for:	Title of Publication
1880	The Fisheries and Fishery Industries of the United States, Section II, Senate Document No. 124, 47th Congress, 1887

1950	Fishery Statistics of the United States, 1950

For the years since 1950, statistical surveys have been published each year in Fishery Statistics of the United States.

SECTION 6 - GULF FISHERIES

The record commercial catch of fish and shellfish landed at ports of the Gulf States (West Coast of Florida, Alabama, Mississippi, Louisiana, and Texas) was nearly 1.5 billion pounds worth a record \$113.5 million. The landings were 145.6 million pounds greater than in 1964, and the value increased \$14.2 million. Most of the increase in both volume and value was the result of the excellent conditions that prevailed in four of the area's major fisheries--shrimp, menhaden, blue crab, and red snapper. In addition to an abundance of these fish in most areas of the Gulf, the market was strong and ex-vessel prices were at high levels throughout the year.

Compared with 1964, Louisiana landings (787.1 million pounds) increased 90.9 million and accounted for 54 percent of the catch. Mississippi landings (368.4 million pounds) were up 36.5 million; Texas (154.3 million pounds), up 9.3 million; West Coast of Florida (135.9 million pounds), up 6.2 million; and Alabama (17.8 million pounds), up 2.7 million. Each State also gained in value of landings compared with the previous year: Louisiana landings valued at \$36.8 million increased \$3.3 million; Texas (\$35.5 million), up \$6.0 million; West Coast of Florida (\$26.9 million) up \$2.7 million; and Mississippi (\$9.3 million) and Alabama (\$5.0 million), both up slightly more than \$1.0 million each.

Fishermen and vessels. There was a moderate increase in the number of fishermen aboard vessels--11,889 compared with 11,744 in 1964. There were 8,857 regular fishermen using boats--a slight decline compared with 8,990 in the previous year. Many of these fishermen turned to other types of employment or became part-time or casual fishermen (deriving less than 50 percent of their income from commercial fishing). There were 4,825 casual fishermen in boats--388 more than in 1964. The number of vessels in the commercial fishing fleet grew to a record 3,683--101 more than in the previous year.

According to Bureau of Customs records, 298 vessels (craft over 5 net tons) were issued first documents as fishing craft during the year--77 more than in 1964. The general trend was toward construction of larger vessels with greater horsepower. There were many installations of engines with horsepower ratings of 300 to 400 compared with 165 to 175 and 200 to 220 ratings, which predominated during prior years. In length, 117 of the newly documented vessels were in the 60 to 70-foot category. The strong ocean currents encountered on the shrimp grounds of the Caribbean area where many of the new craft will be working dictated the need for greater horsepower. Owners of vessels fishing only grounds off the U.S. coast also installed more powerful engines, because they believe that reduced running time from port to fishing grounds and return would compensate for the higher cost of the more powerful engines.

Installation of freezing units and cold storage holding facilities aboard shrimp trawlers was resumed. This was not a new undertaking; however, as earlier attempts had been unsuccessful. One of the reasons for the failure was that the systems were too complicated to be operated and maintained by the average crewman, and a breakdown at sea resulted in considerable loss to the owner. By the end of the year, 10 Tampa-based trawlers had installed freezing and holding facilities. Vessel owners felt that the newly designed equipment was so simple that the average crewman could operate and maintain it.

Processed products. The value of processed fishery products in the Gulf States was \$208.0 million--an increase of \$34.8 million compared with the previous year. Louisiana accounted for 30 percent; Texas, 29 percent; Florida, West Coast, 25 percent; Mississippi, 12 percent; and Alabama, 4 percent. Fresh and frozen items accounted for 69 percent of the value; canned products and industrial products, 15 percent each; and cured products, 1 percent. There were 847 wholesale and processing establishments operating in the Gulf area in 1965 compared with 780 in 1964.

Some technological advances in processing were made during 1965. Four major processing plants in the Gulf installed systems using liquid nitrogen to freeze fishery products. The main advantages attributed to this new type of freezing are better quality and a reduction in weight loss because of the very fast freeze. The system also simplified the production of IQF (individually quick frozen) items.

GULF FISHERIES

Two new oyster shucking machines were developed. The principal feature of both machines was that the oysters were prepared for an easy insertion of the shucking knife. One machine was a hydraulic hammer which "billed" oysters (breaking the outer shell so that a shucking knife can be easily inserted) as they were fed into the machine one at a time. The other machine was a revolving drum which caused oysters to gape as a result of the tumbling action; a constant stream of water under pressure directed on the oysters while revolving in the drum helped rid the shell of mud and various types of attached fouling organisms.

Weather. Hurricane Betsy, one of the most destructive storms to ever strike the U.S. mainland, moved inland just west of the mouth of the Mississippi River in September. The great storm spread over the area from Biloxi, Miss., to Morgan City, La. The eastern coastal parishes of Louisiana, directly in the hurricane's path, suffered the greatest damage. Seafood processing plants and unloading facilities were destroyed, and many small fishing craft were also destroyed or extensively damaged. Facilities in areas on the fringe of the main force were not entirely free from damage, but most were able to resume operations by the end of September. Destruction of powerlines resulted in a loss of ice making facilities and created an ice shortage for many weeks in some areas. The few fishermen who were able to fish soon after passage of the hurricane lost a substantial number of shrimp trawls in the debris that the hurricane deposited on the main fishing grounds.

Labor. There were no labor disputes among the few segments of the fishing industry whose employees were union members. There appeared to be no intensification or expansion of the union organizing activities that began the previous year.

Shrimp. Shrimp landings of 195.2 million pounds (heads-on) valued at a record \$70.9 million were 9 and 13 percent more in volume and value, respectively, than in the previous year. Landings on the West Coast of Florida were 6 percent less than in 1964, but the catch was larger in all other States. Alabama had the greatest gain in landings--33 percent more than in 1964. Mississippi landings increased 28 percent; Texas, 17 percent; and Louisiana, 5 percent compared with the previous year. In all States the value of landings was greater than in 1964. In Mississippi the value increased 40 percent; in Alabama, 39 percent; Texas, 19 percent; and West Coast of Florida and Louisiana, 4 percent each.

During most of the year supplies of shrimp, both domestic and imported, were insufficient to meet the ever increasing demand for this popular seafood. The competition for domestic supplies sustained ex-vessel prices at a high level even through peak production periods. Although most vessel owners and fishermen had a good year, many processors found it necessary to reduce profit margins in order to ensure good movement of inventories during production peaks. At the end of the year, cold storage holdings of raw headless shrimp were the lowest since 1962. Although records were not available on holdings of canned shrimp, most canning plant owners commented that sales had been brisk and that their inventories were well below normal. Exports of canned shrimp increased despite their high price.

The third successive year of good financial returns in the shrimp fishery resulted in a great expansion in construction of new shrimp vessels. In addition Gulf shipyards worked at capacity to meet an increased demand from the fishing industry for vessels for use in expanded oil exploration and drilling. Many prospective shrimp vessel owners found that shipyards could not guarantee delivery of a new vessel until far in the future, and many yards were reluctant to accept orders. There were a few additions (largely newly constructed vessels) to the number of U.S. flag vessels fishing shrimp in the Caribbean area. These craft, owned by U.S. companies, land their catches in foreign ports and are not considered part of the U.S. fleet.

Menhaden. The menhaden catch of 1,022,837 pounds was only 3 percent less than the record 1962 landings. For the second consecutive year a September hurricane shortened the fishing season. No fishable concentrations of menhaden were found after these storms. In addition, the hurricane put out of operation for the remainder of the year two menhaden plants at Empire, La., which produced 14 percent of the U.S. supply of menhaden meal and oil in 1964.

The market for menhaden industrial products was stable throughout the year, and prices were at relatively high levels. Fish meal prices began at about \$144 per ton for 60 percent protein menhaden meal, f.o.b. New York, and continued an upward trend to the end of the year. Fish oil prices likewise began a steady climb early in the year and, except for minor fluctuations in the summer, reached a high of 9-1/2 cents per pound in April and remained at that level to the end of the year.

Oysters. Production of 19.2 million pounds of oyster meats was 18 percent less than in the previous year. Texas landings (4.8 million pounds) surpassed the 1964 record production by 44 percent, but the catch decreased in all other States. Landings on the West Coast of Florida (2.8 million pounds) were down only slightly from 1964, but in Louisiana (8.3 million pounds) they declined 27 percent. Part of this reduction was caused by the almost complete destruction, by hurricane Betsy, of leased reefs in Barataria Bay. The full impact of the hurricane would not be felt until the following year. In Alabama, the catch of 493,000 pounds was only about one-half the 1964 production. A major factor in this decline was the pollution of some of the most productive oyster reefs by a spring flood. Mississippi landings (2.7 million pounds) were 44 percent less than in the previous year and 22 percent less than the 1960-64 average. In September, oystering was curtailed in Mississippi waters until it could be determined that reefs had not been polluted by the debris deposited on them by hurricane Betsy.

During the peak spring production, periods of very light demand for shucked and shell oysters led to lower prices to processors and fishermen. As the September hurricane damage to Louisiana reefs became apparent, prices to fishermen and processors increased rapidly and reached almost record heights by the end of the year.

Blue crabs. The catch of blue crabs (37.2 million pounds) was 46 percent more than in 1964, and the greatest volume landed since 1945. The record 20.6 million pounds landed at West Coast of Florida ports were 6.5 million pounds larger than in the previous year. Compared with 1964, Louisiana landings (9.5 million pounds) increased 3.6 million and Texas (3.6 million pounds), 1.1 million. There were also slight increases at Alabama and Mississippi ports. Fishermen received an average price of slightly more than 6 cents per pound--just about the same as the previous year.

There were 4.3 million pounds of fresh and frozen crab meat produced--45 percent more than in 1964. The average price for crab meat (primary wholesale level) was \$1.23 per pound, about 5 cents per pound less than the 1964 average. Demand was strong during most of the year, but in October and November it diminished and prices declined.

Edible finfish. There was little change in the volume of landings--94.2 million pounds compared with 93.7 million in 1964. Ex-vessel value of the catch, however, was 5 percent more than in the previous year. New volume records were established for two leading species--flounders (1.2 million pounds) and groupers (9.1 million). King whiting landings (1.9 million pounds) were the largest since 1953, and red snapper (13.4 million), the largest since 1902. Compared with 1964, there were substantial gains in the catches of red drum, up 21 percent; king mackerel, up 44 percent; spotted sea trout, up 20 percent; and Spanish mackerel, up 24 percent. Landings of mullet, the perennial volume leader, were 8 percent less than in 1964. Fresh-water catfish landings, which play an important role in the economy of many coastal areas, were 16 percent less than in 1964. The domestic shortage of fresh-water catfish caused many wholesale dealers to canvass South American countries in an effort to locate supplies to meet the increasing demand. In addition, the relatively high prices offered for available supplies of these fish stimulated greater interest and activity in their pond culture. Supplies of red snapper, most valuable of the edible finfish, were again inadequate to meet the demand and ex-vessel prices were at record highs at the end of the year.

Legislation. The Florida legislature passed three laws affecting the commercial fisheries: License fees for primary wholesale producers of fish were raised from \$50 to \$100--the additional funds collected are to finance an intensive seafood marketing program. The minimum size regulation for spiny lobsters was changed from 3-1/8 to 3 inches for the carapace (head, body, or front section) and minimum measurement for

GULF FISHERIES

tail section was changed from 5-3/4 inches to 5-1/2 inches. A new count size regulation was also established for shrimp--not more than 5 percent of a vessel's catch may be smaller than 47 to the pound, heads-on, or 70 to the pound, heads-off.

The Texas legislature enacted a law prohibiting the taking of egg-bearing ("sponge") blue crabs for any purpose, by any means from Texas waters.

Activities of foreign vessels. In March, the Soviet trawler Otradny was observed 23 miles off Egmont Key on the West Coast of Florida. The vessel remained in the area about 1 week, apparently engaged in exploratory fishing.

New Bureau Laboratory. The Bureau's newly constructed Tropical Atlantic Biological Laboratory, located on a 5-acre tract of land on Virginia Key, Miami, Fla., was dedicated in ceremonies held in November.

Research expanded. Funding of the previously enacted Commercial Fisheries Research and Development Act (Public Law 88-309) enabled the individual States to greatly expand needed research. Most of the funds allotted to Florida were used to support an intensive marketing program designed to increase the consumption of Florida seafood. The Secretary of the Interior authorized the use of \$100,000 from funds allotted under Section 4(b) of the Act for the restoration and rehabilitation of the oyster resources of Louisiana which were damaged by hurricane Betsy; Section 4(b) of the Act provides for the direct grant of funds with no matching funds required from the States in the event of a resource disaster.

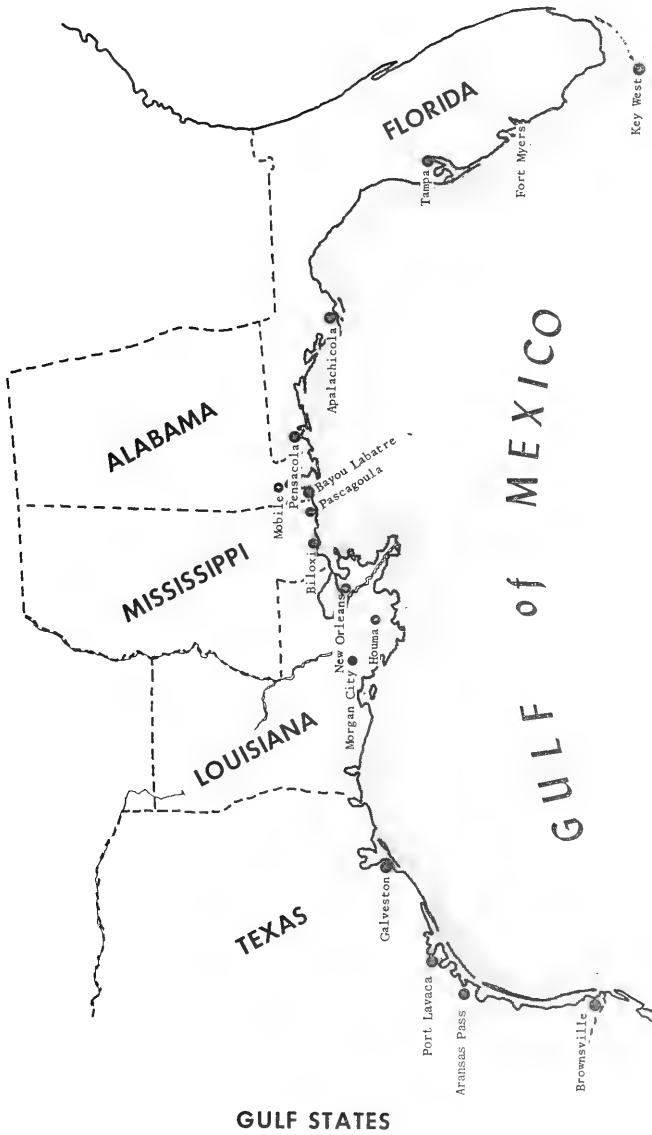

Other information. Condensed summary data on operating units and catch by States appearing on the following pages have been previously published in Current Fishery Statistics No. 4334. Data on the catch and operating units of the east coast of Florida and the entire State of Florida may be found in Section 5 of this Digest. Seasonal variations in the catch of fish and shellfish in Florida, Alabama, Mississippi, Louisiana, and Texas can be ascertained from monthly landing bulletins issued currently for these States in cooperation with the fishery agencies of each State. Additional aspects of the Gulf fisheries may be found in daily, monthly, and annual reports published by the Bureau's Fishery Market News Service, Federal Building, 600 South Street, New Orleans, La. 70130. Specific and detailed accomplishments of the Bureau are contained in Report of the Bureau of Commercial Fisheries, Calendar Year 1965.

Acknowledgments. The following organizations assisted the Bureau to collect data appearing in this Section: Florida State Board of Conservation, Alabama Department of Conservation, Mississippi Marine Conservation Commission, Louisiana Wild Life and Fisheries Commission, and Texas Parks and Wildlife Department.

GULF FISHERIES

GULF SHRIMP FISHERY, 1965

Landings of 122.9 million pounds (heads-off) were 9.6 million pounds (8 percent) more than in 1964. Six of the eight major grounds fished by the Gulf fleet yielded more shrimp than in the previous year. The greatest increase was from waters off the Texas coast (35.2 million pounds), which yielded 5.5 million pounds more than in 1964. The catch from waters between Pensacola, Fla. and the Mississippi River was up 3.1 million pounds; and from waters between the Mississippi River and the Louisiana-Texas border, up 1.9 million pounds. Minor gains were also made in the Sanibel-Tortugas and Apalachicola areas and in international waters off the Honduras coast. The shrimp grounds between the Mississippi River and the Louisiana-Texas border continued to be the most productive with 39.7 million pounds --about one-third of the total Gulf landings. The catch from the international waters off the Mexican coast west of long. 94° W. declined slightly from 1964. This decrease is normal because when shrimp are abundant along the Gulf coast, vessels need not travel to these rather distant grounds to have a profitable year. Landings from the Campeche-Obregon grounds (11.3 million pounds) were only 8 percent less than in 1964, but catch rates during the final quarter of the year indicated future declines.

Large populations of brown shrimp in Louisiana and Texas waters were a major factor in the increased landings, which in turn, substantially changed the species composition of landings. In 1965, brown shrimp comprised 51 percent of the total landings; white, 27 percent; pink, 21 percent; and royal red shrimp and sea bobs, 1 percent. In 1964, however, white shrimp accounted for 39 percent of the total landings; brown, 37 percent; and pink, 24 percent. Some of the decline in white shrimp landings was caused by a 3-week curtailment of fishing in Louisiana waters as a result of damage to the fleet and debris deposited on the fishing grounds by hurricane Betsy.

In April some Florida trawlers discovered a small but productive fishing ground off the Yucatan Peninsula near Cabo Catoche. Although exceptionally large catches were made (occasionally as high as 12 boxes per night), swift currents and coral bottom caused heavy losses to gear. Shrimp from the area closely resembled "pinks" and were sold as such by Florida dealers. Biologists at the Bureau's Biological Laboratory in Galveston, Tex., however, identified specimens as Penaeus braziliensis rather than Penaeus duorarum.

Although landings were substantial and approximated the good production of 1960 and 1963, available supplies were not sufficient to meet the ever-increasing demand--even though domestic landings were supplemented by a record volume of imported shrimp. As a result of this demand, competition for available supplies kept ex-vessel prices comparatively high and relatively stable during the year. However, average price per pound at ex-vessel level did not surpass the previous highs established in 1962.

Average ex-vessel prices for each of the major groupings by count size were 4 to 6 cents per pound higher than in 1964, except for 68-and-over count size, which increased only 2 cents per pound. These smaller sized shrimp represented 18 percent of the landings --compared with 13 percent the previous year. The result was that the overall average ex-vessel price per pound of 58 cents, was only 3 cents per pound greater than in 1964.

The following tabulations include information on the species of shrimp taken in the Gulf by size; the number of fishing trips; and the catch by area, depth, and size. Catch figures represent the heads-off weight and, therefore, are not directly comparable with the heads-on (live-weight) quantities published in the General Review, regional tables, or the Review of Certain Major Fisheries. The pounds of heads-off shrimp may be converted to heads-on weight by multiplying brown shrimp poundage by 1.61; white, 1.54; pink, 1.60; seabobs, 1.53; and royal red, 1.80.

Information on the landings and catch of shrimp in the Gulf area in the following tables has been previously published in Current Fishery Statistics No. 4113. Data on landings and value of shrimp by species and size for the South Atlantic States are included in Section 5 of this Digest.

NOTE:--ALL WEIGHTS ARE ON HEADS-OFF BASIS. THE SIZE INDICATES THE NUMBER OF HEADS-OFF SHRIMP TO THE POUND. TO CONVERT TO HEADS-ON WEIGHT MULTIPLY BY 1.61 FOR BROWN, 1.60 FOR PINK, 1.54 FOR WHITE, 1.53 FOR SEA BOBS, AND 1.80 FOR ROYAL RED. THE STATES LISTED REPRESENT THE STATES WHERE THE SHRIMP WERE LANDED REGARDLESS OF WHERE CAUGHT. THE NAMES OF THE SPECIES USED IN THESE TABLES ARE AS FOLLOWS: WHITE SHRIMP (MOSTLY PENAEUS SETIFERUS), BROWN SHRIMP (MOSTLY PENAEUS AZTECUS), PINK SHRIMP (MOSTLY PENAEUS DUORARUM), SEA BOBS (MOSTLY XTIPHOPNEAUS KROYERI), AND ROYAL RED (MOSTLY TRIMENAEUS ROBUSTUS). THE VALUE REPORTED IS THE AMOUNT RECEIVED BY THE OWNERS OR OPERATORS OF THE VESSELS FOR THE FIRST SALE AT THE DOCK. ANY EXPENSES INVOLVED IN HANDLING OR PROCESSING ASHORE ARE NOT INCLUDED, EVEN THOUGH CHARGEABLE TO THE VESSEL. THE SIZE REPORTED GENERALLY IS THAT USED AS OF THE FIRST SALE. SIZE GRADING IN VARYING DEGREES OF UNIFORMITY MAY OR MAY NOT OCCUR AT, OR PRIOR TO, THE TIME FIRST SALES ARE MADE. IF GRADING IS NOT DONE AT THIS TIME, THE SIZE REPORTED IS AN AVERAGE SIZE AND MAY INCLUDE SEVERAL SIZE CLASSIFICATIONS.

SHRIMP TRAWLER

SURVEY PROCEDURE IN THE GULF OF MEXICO

The statistical program in the Gulf States is under the general direction of the Bureau's Regional Office in St. Petersburg Beach, Fla., with direct supervision by a regional supervisor of statistics and market news in New Orleans, La. The program is prosecuted by field reporters stationed at Key West, Miami, Fort Myers, Tampa, and Apalachicola, Fla.; Bayou LaBatre, Ala.; Ocean Springs, Miss.; New Orleans, Galiano, Houma, and Morgan City, La.; and Port Arthur, Galveston, Freeport, Aransas Pass, Brownsville, and Port Isabel, Texas. These field reporters are specialists trained in obtaining and reporting fishery statistical data on a daily, monthly, and annual basis.

Statistics assembled by the Bureau on the fisheries of the Gulf States Coastal area include data on employment of fishermen, shoreworkers, fishing craft and gear, the volume and value of the catch, and the volume and value of processed fishery products. The data are assembled from all available sources including records maintained by State fishery agencies, fishermen, and fish wholesale dealers, buyers, and processors.

Catch. Cooperative programs of differing magnitudes have been established with the fishery agencies of each of the five Gulf States. Texas and Florida have State monthly reporting systems, whereby dealers and buyers are required to submit a monthly report on forms supplied by the State, listing the quantity of fish and shellfish by species purchased from fishermen. Field reporters of the Bureau of Commercial Fisheries assist in the collection and tabulation of data for publishing in monthly landing bulletins for these States. In Alabama, Mississippi, and Louisiana, tax records are utilized by Bureau employees in obtaining landing data on oysters. Certain catch records on fish landed in Louisiana are also obtained from records of that State. Data on receipts in the New Orleans French Market are collected by reporting specialists of the Bureau on a daily basis for use in the daily reports published by the Fishery Market News Service and are supplied the State of Louisiana at the end of each month. Information on all finfish, crab, and shrimp landings in Alabama and Mississippi is collected by Bureau employees.

Shortly after the close of each year, a revised tabulation is prepared listing the species catch by volume and value by county. Shrimp are excluded since they have been recorded on punch cards each month. Such revisions as are necessary in the daily or monthly data previously published are made in the annual tabulation. Fishermen and dealers are interviewed to determine the area of capture (water body) and the type of gear utilized for taking each species. When the interview is completed, the landings (or catches) totals are prorated to the proper waters and gear within each county, and catch statistics by waters and gear for each county are forwarded to the Washington office. The data are transferred to punch cards and machine processed. Detailed information on the shrimp catch, which had previously been entered on punch cards is now integrated with the figures for other species. Processed data are forwarded to field reporters for examination, auditing, and necessary revisions, after which they are returned to the Washington office for final review and publication.

Throughout the Gulf, shrimp data are obtained daily by Bureau reporting specialists and recorded on individual landing reports that list the name of the vessel and the volume and ex-vessel value of the catch by species, size, and area of capture. A schedule is prepared for each vessel for each trip. These are forwarded to the Washington office, about 2 weeks after the end of the month in which the landings occurred. The data are machine processed to provide the detailed statistical information required by those interested in the shrimp fishery.

During recent years, there has been a trend toward obtaining catch data on a monthly basis in sufficient detail to permit their direct use in the annual Statistical Digest. In the States of Alabama and Mississippi, data on the catch by gear, water, and species are ob-

GULF FISHERIES

378

tained on a monthly basis and entered on punch cards from which are prepared the monthly landing bulletins. The punch cards are then utilized to prepare the annual tabulations for publication in Fishery Statistics of the United States. Considerably more detail on the catch by waters and gear is available than is published in this report.

Operating units. Prepunched vessel cards containing the name of the vessel, the official number, rig code, gross tons, length, and year built are furnished field reporters each year. These cards are obtained from the Bureau of Customs and are checked out by field personnel. Reporters interview the vessel captains to obtain number of crew, and number, type, and quantity of gear utilized in each fishery. The number of crew reported is the greatest number of crewmen aboard the vessel for each gear operated at any one time. Number and quantity of gear are represented by the greatest amount of gear the craft utilized at one time. The data do not include gear ashore or carried aboard the vessel for replacement. Field reporters maintain a list of the fishing vessels obtained from the State records to ensure completeness in the operating unit survey. Machine tabulations of shrimp landings are utilized to obtain the vessels fishing this species during the year. A vessel is reported once for each type of gear fished in each State.

Data on crew and gear are recorded directly on the prepunched cards. (Data on all craft of less than 5 net tons are classified as shore and boat craft, and a single card is prepared for the total number of boats using each type of gear in each county). The field entries are punched and processed in the Region under contract by a service agency and the tabulations are returned to each reporter who prepares the State operating unit tables. After review by the Regional Supervisor, they are forwarded to the Washington Office.

Processing and Manufacturing. Data on the production of processed fishery and manufactured products are obtained from individual firms, on forms designed for the collection of these data. Much of the information on the pack of canned shrimp, oyster, and crab meat by can size and number of cases is obtained and published each week in the New Orleans Market News report. Subsequently, revisions are made, and a yearly annual total by firm is submitted to the Central Office for publication in the Canned Fishery Products bulletin. Information on the production of fish meal, oil, and solubles is obtained each month for publication in monthly Fish Meal and Oil bulletins and in the annual report, Industrial Fishery Products. Data on the monthly production of fish sticks and portions and breaded shrimp are collected quarterly for publication in Fish Sticks and Portions and Breaded Shrimp. Packaged fish and shellfish data are obtained on an annual basis from each firm, and summaries are published in the annual Packaged Fishery Products bulletin. A summary of the production of all processed fishery items, including shellfish, is contained in the Gulf States sectional annual bulletin.

Data on freezings and holdings of fishery products are collected monthly on a special form which is mailed at the end of the month to each cold storage warehouse in the Gulf States. After auditing, the completed reports are returned to the New Orleans office. The schedules are then mailed to the Washington Office where they are again reviewed before tabulation and publication in monthly and annual frozen fishery products bulletins.

General. A considerable quantity of current fishery data are available in the daily report issued by the New Orleans Fishery Market News Office. Persons interested in day-to-day fluctuations should consult these reports. Those interested in seasonal fluctuations should refer to the monthly landing bulletins. The Statistical Digest, Fishery Statistics of the United States contains the most complete annual data. Information on the catch by waters is tabulated and supplied to State and Federal laboratories along the Gulf Coast.

GULF STATES BIBLIOGRAPHY OF FISHERY STATISTICS

Federal fishery statistics have been collected by a number of agencies, including the Fish Commission, Bureau of Fisheries, Fish and Wildlife Service, and Bureau of the Census. The data have been published in several series of reports. Since funds for conducting statistical surveys have been limited, there has been wide variation in the frequency of the surveys in the various areas. This has made it difficult to determine the years in which data were available for the various sections, and also to locate the reports in which the results of surveys were published. The following bibliography was prepared to make it easier to locate the results of the various canvasses of the fisheries of the Gulf States. No attempt has been made to include those publications giving fragmentary or summary data only, or data on only certain fisheries or states. Unless otherwise noted, all are publications of the Bureau of Commercial Fisheries and its predecessor agencies.

For the years since 1948, statistical surveys have been published each year in Fishery Statistics of the United States.

SECTION 7 - PACIFIC COAST FISHERIES

Landings of commercial fishery products at Pacific coast ports were 1.1 billion pounds valued at \$148.4 million--a decline of 4.9 million pounds but an increase of \$19.0 million compared with 1964. Catches of tuna, halibut, ocean perch, shrimp, and Dungeness and king crabs increased. Landings of mackerel, salmon, and herring declined.

The Pacific Coast States accounted for 24 percent of the volume and 33 percent of the value of U.S. landings. The area was second only to the Gulf coastal States in quantity and exceeded all other areas in ex-vessel value of the catch. Alaska led the Pacific Coast States with 492.2 million pounds worth \$70.3 million--accounting for 43 and 47 percent of the volume and value, respectively. California was next with 458.0 million pounds (40 percent) valued at \$50.7 million (34 percent). Washington and Oregon took the remaining 196.5 million pounds (17 percent).

Fishermen and vessels. The Pacific coast had 34,778 commercial fishermen--1,679 more than in 1964. The number of fishermen on vessels and on boats and shore increased. There were 4,855 commercial fishing vessels of 5 net tons or more--a gain of 288 compared with the previous year. The increase in number of vessels was greater than in any other section of the country.

Record trips were made by California-based tuna vessels during 1965. In March, the largest converted tuna seiner, Day Island, arrived in San Pedro, Calif., with a record trip of about 1,100 tons of tuna. This was the first California trip landing of more than 1,000 tons and exceeded the previous record landing by the same vessel in Puerto Rico. This trip by the Day Island was the third record trip to Terminal Island canneries during the first 3 months of 1965. The other trips were made by the converted tuna purse seiners, Pilgrim and Puritan, which delivered more than 900 tons each.

Processed products. Fishery products processed in the Pacific Coast States were valued at \$405.2 million--an increase of \$55.2 million (16 percent) compared with 1964. California led with \$182.8 million (45 percent) followed by Alaska, \$150.1 million (37 percent), and Washington and Oregon, \$39.2 million (10 percent) and \$33.1 million (8 percent), respectively.

Canned fishery products accounted for 76 percent of the total value; fresh and frozen items, 17 percent; and cured and industrial products together, 7 percent. There were 557 wholesale and processing plants operating in 1965 compared with 600 in the previous year.

The pack of canned tuna, 10.8 million cases, was the same as in 1964; but the value, \$141.5 million, was \$9.7 million greater and accounted for 35 percent of the value of the Pacific Coast States processed fish products. Consumption of canned tuna increased in 1965, and U.S. fishermen received high prices for their catch.

The pack of canned salmon was 3.6 million cases valued at a record \$122.7 million--a decline of 125,600 cases but an increase of \$27.0 million compared with 1964. Canned salmon accounted for 30 percent of the value of the Pacific Coast States processed products. The higher value resulted from the phenomenal run of red (sockeye) salmon into Bristol Bay, which produced one of the largest packs of these fish in recent years. Red salmon production also improved in other areas of Alaska. Red salmon are preferred by the consumer and consequently bring the highest price. In 1965, the fish were smaller than usual and, since they were purchased by the fish rather than by the pound, the cost of packing a case was higher than in 1964. The Puget Sound pack of canned salmon from local fish was 181,965 cases compared with 75,934 cases in 1964. The pack of all species except chum salmon was greater than in the previous year. For reasons unknown the good pink salmon run expected in Puget Sound was far smaller than predicted and the canned pack was only a fraction of the pack that had been anticipated. The Puget Sound pack of frozen Alaska salmon was 54,592 cases--up 30 percent from the previous year. Red salmon predominated in the pack made from Alaska salmon.

Salmon roe. In Alaska, salmon roe continued to gain prominence as a highly saleable byproduct of the salmon industry. In 1965, salmon roe production was 2.6 million pounds worth \$1.6 million. Of this amount, about 300,000 pounds was used for bait; the remaining 2.3 million pounds (worth \$1.5 million) supplied a growing market for salmon caviar. The

PACIFIC COAST FISHERIES

381

new industry was developed largely through efforts of a Japanese firm, located in Alaska, seeking a stable supply for the home market. The company paid canneries 9 cents a pound for fresh salmon roe and provided the labor of Japanese citizens who are experts in the art of making caviar. A firm in Petersburg, Alaska, prepared salted salmon eggs for the Japanese market under the supervision of two Japanese technicians. In 1965, salmon roe exports to Japan were less than one-half the target quantity because of the small pink salmon run. Because of the strong demand, retail prices in Japan were \$1.91 to \$2.40 for the processed chum roe; \$1.64 to \$2.15 for red roe; and \$1.64 to \$2.21 for pink roe.

High-seas fishery. Pacific coast fishermen landed 310.9 million pounds of fish taken on the high seas off coasts of foreign countries--27 percent of the total Pacific coast catch. The tuna catch taken off Central and South America (257.6 million pounds) was 15.3 million pounds more than in 1964; it accounted for 60 percent of the total U.S. landings off foreign coasts and 83 percent of the Pacific catch off foreign coasts. Traditionally, Pacific coast fishermen range farther than those of any other area, operating from the Bering Sea to waters off Peru and into the tropical Atlantic.

Tuna. Tuna landings at ports along the Pacific coast were 296.5 million pounds valued at \$38.7 million--an increase of 10.2 million pounds and \$1.9 million compared with 1964. The landings, however, were about 1.6 million pounds less than the average for the last 10 years. California landings (279.9 million pounds) accounted for 94 percent of the total. Catches of skipjack and yellowfin tuna increased but landings of albacore and bluefin declined.

The albacore catch of 37.2 million pounds was 10.8 million less than in 1964. California landings, 23.2 million pounds (down 19.3 million) were the principal cause of the decline. Albacore fishing, which usually begins in waters off southern California in July, got off to a slow start in 1965, with landings of less than 2.0 million pounds--the lowest recorded July landings in 10 years. Scientists attributed the small catch partly to lower water temperatures off the California coast. The temperatures during July were reported to be as much as 5° F. below the most recent 5-year average for this month. High winds and rough seas also hampered fishing operations. By early August, however, albacore fishing was good off central California, primarily in the Morro Bay and Moss Landing area--possibly the result of warming water temperatures along the coast. By mid-August albacore were appearing in northern California waters. The fishing improved late in the month, as the fish moved northward to points off Washington and Oregon. Albacore landings in Oregon were 12.1 million pounds compared with 4.4 million in 1964, but in Washington, the catch of 1.9 million pounds increased only 800,000 pounds. Many of the California trollers followed the fish north, and a good run off the Columbia River in early September attracted a large number of Oregon craft. Catches were so good that for awhile the canneries at Astoria, Oreg., were unable to cope with the heavy landings. Most of the catch sold at Oregon and Washington ports for \$325 per ton--some prices were as low as \$310 and some as high as \$335 per ton. As in the previous year, the albacore season got underway with no formal price agreement with the canners. A prevailing ex-vessel price of \$325 per ton for fish over 12 pounds and \$300 per ton for fish under 12 pounds generally remained in effect throughout the albacore season.

The bluefin fishery, like the albacore, was harassed by high winds, heavy seas, and low water temperatures. Landings of 16.0 million pounds were 7.2 million less than in the previous year and 15.2 million (49 percent) below the 1962 record 31.2-million pound catch. The season's first sizeable catch of bluefin tuna was taken in mid-June off Baja California about 400 miles south of San Diego, Calif. Ex-vessel prices for bluefin were \$267 per ton until August when they declined to \$255 per ton. In December they increased to \$308 per ton.

Skipjack landings of 84.8 million pounds were 18.7 million more than in the previous year, and yellowfin landings (158.5 million pounds) were 9.5 million more. The skipjack and yellowfin season began rather slowly in January, for bad weather hampered fishing from lower California south to waters off Central America. Some excellent catches of skipjack were made, however, during January by vessels fishing off Ecuador and Peru. Late in January skipjack and yellowfin fishing was good as far north as Baja California.

PACIFIC COAST FISHERIES

Excellent fishing continued through March, and some record catches were made. Landings of skipjack and yellowfin were sporadic from April to October because weather was unfavorable along the Central and South American coasts. Seiners made the year's best catches during November and December off Baja California when the weather was good.

Ex-vessel prices paid at auction to members of ATA (American Tunaboat Association) and vessel owners not participating in the auction, under terms of an agreement between ATA and the canneries, varied considerably.

Skipjack prices ranged from \$200 to \$311 per ton. Prices from January through March were \$200 per ton. During April the ex-vessel prices for skipjack advanced to \$211 per ton. During May, June, and July, prices for skipjack again advanced and ranged for the 3-month period as follows: May, \$211 to \$226; June, \$227; and July, \$225 to \$227 per ton. August prices started at \$225 per ton but by the end of the month had declined to \$205 per ton. September and October prices were stable at \$205. During November, prices increased sharply and reached a November ATA auction record of \$241 per ton. By December prices ranged from \$241 to \$311 per ton for premium skipjack and \$223 to \$243 for fish under 6 pounds. The price of \$311 per ton for premium skipjack at the year's end was nearly a record, exceeded only by a high of \$320 per ton paid during the December 1947 to May 1949 period. This price contrasted sharply with the last auction held in 1964, when skipjack prices were \$200 per ton.

Yellowfin prices ranged from \$245 to \$354 per ton. At the beginning of the year prices were \$270 per ton for premium yellowfin and \$245 for fish under 12 pounds. These prices remained stable through March. During April prices for yellowfin advanced \$10 per ton on premium and \$21 per ton for fish under 12 pounds. April's price range per ton was: premium yellowfin at \$270 to \$280, and fish under 12 pounds at \$245 to \$266. Prices paid during May, June, and July ranged from \$280 to \$287 per ton for premium, with fish under 12 pounds, 5 percent less. Prices in August reflected a \$2 per ton decrease in comparison with prices paid during the June-July period and ranged from \$275 to \$285 per ton. Prices, stabilized during September and October, were \$275 for premium yellowfin and 5 percent less for fish under 12 pounds. Yellowfin prices reached \$297 per ton in November, a record high for an ATA auction. During December yellowfin prices ranged from \$299 to \$354 per ton, less 5 percent for fish under 12 pounds. The price paid at the auction of the year for premium yellowfin was a record high of \$354 per ton, which exceeded the January 1 to August 15, 1954, high of \$350 per ton.

Salmon. Salmon landings were 326.8 million pounds valued at a record \$65.2 million--a decline of 7 percent in volume but an increase of 16 percent in value compared with the previous year.

The Alaska salmon catch of 274.8 million pounds was 36.8 million (12 percent) less than in 1964--chiefly because of reduced landings of pink and chum salmon. Production of chinook and silver salmon also decreased, but less markedly. The value was \$48.3 million, however, an increase of \$6.9 million (17 percent) as a result of 162-percent gain in landings of high-priced red (sockeye) salmon. Landings of these fish (142.0 million pounds) were 87.9 million pounds greater than in 1964, and the catch was larger in all regions. Chinook landings (11.0 million pounds) were down nearly 1.0 million, with the entire decline occurring in southeastern Alaska. Compared with 1964 the catch of chums (29.3 million pounds) and pinks (74.9 million pounds) declined 33.4 and 87.4 million pounds, respectively. Silver salmon landings (17.7 million pounds) were down 3.3 million--catches in central and western Alaska ran about one-half the 1964 production.

A phenomenal run of red salmon to Bristol Bay, estimated conservatively at 61 million fish, is believed to be the largest run in modern history and perhaps the greatest in Bristol Bay. The 61 million red (sockeye) salmon have been roughly divided as 2 million immature fish taken by the Japanese high-seas fleet in 1964; 6 million mature fish taken by the Japanese fleet in 1965; 24 million mature fish caught by U.S. fishermen; and 29 million that escaped to the spawning rivers. The run was twice the highest published pre-season estimate and, as in all large runs, the fish were small--the smallest recorded in the history of the Bristol Bay fishery. Because the salmon were purchased by the fish rather than by the pound, the cost of packing a case was extremely high. The industry was prepared for a large run but was unable to cope with the tremendous surge of fish. Daily

PACIFIC COAST FISHERIES

363

catch limits were placed on the fishermen for extended periods of time. Despite the size of the run, only 2 of the 10 Bristol Bay Rivers had greater than average runs. The Egegik district had an inshore run of 4.5 million fish which yielded a record catch of 3.0 million fish and an escapement of 1.5 million. The other exceptional run was about 47.0 million fish, including catch and escapement, in the Kvichak River.

Estimates of the size of the Bristol Bay runs were somewhat faulty; however, the predictions of size of the sockeye run on the Fraser River were reasonably accurate. Preseason estimates of catches of the United States and Canada proved to be correct--about 1 million fish for each country. The early Stuart Lake run was a disappointment; the Quesnel-Horsefly run was the mainstay of the Fraser River runs.

The Washington salmon catch of 30.4 million pounds valued at \$8.4 million was 43 and 28 percent more in volume and value, respectively, than in 1964. In the Puget Sound district, the 394,000-pound troll catch of chinook was less than one-half the 1964 production but the net catch of about 1.1 million pounds was one of the best in many years. Puget Sound landings of silver salmon in the combined net and troll fisheries were 5.7 million pounds--a gain of almost 500,000 pounds compared with 1964. In the coastal fishery, the net catch of chinooks (745,000 pounds) was one of the best in recent years, but troll landings (845,000 pounds) were down 20 percent from 1964. The silver salmon coastal troll fishery produced 2.9 million pounds--a gain of 67 percent compared with 1964. Chum landings declined along the coast, partly because of emergency closures to increase the spawning escapement. The Columbia River chinook catch during the February season was small, but fishing was good when the spring season opened in April. Extensive catches by Indians and fish mortality at dams resulted in low escapement. Consequently, the summer season was closed for the first time in the history of the Columbia River salmon fisheries. Because of the closure, the few red salmon caught were taken principally by Indians. Coastal Indians in Washington caught 78,100 pounds of red salmon in 1965 compared with 92,300 in 1964 and 341,400 pounds in 1963. The fall salmon season, however, was one of the most productive on the Columbia River in recent years and spawning escapement was excellent. Indian salmon fishing was increasingly a problem in Puget Sound streams during 1965. The Indians claimed that treaty rights allow them to fish when and where they wish with no regard for spawning requirements of the various streams. The problem becomes aggravated late in the year when the quality of salmon deteriorates close to spawning time, and accordingly the Indians can sell them for very little.

In Oregon, the salmon catch was 11.8 million pounds worth \$3.5 million--an increase of 20 percent in volume and 14 percent in value compared with 1964.

The combined Washington and Oregon chinook catch in the Columbia River district was 6.4 million pounds--1.5 million more than in 1964. The Columbia River silver salmon production was also good in both States--the net and troll fisheries together caught 5.4 million pounds compared with 3.7 million in 1964.

Washington and Oregon ports paid uniform prices for troll-caught salmon. At the start of the season, large red kings were priced at 62 cents a pound, compared with 68 cents in 1964; the price was increased to 65 cents in August. Medium red kings brought 49 cents a pound compared with 50 cents in 1964. Small reds and large and small white kings were unchanged at 37, 40, and 25 cents, respectively. The opening price for troll silvers was again set at 30.0 cents a pound, but because of heavy production as the season progressed most dealers did not pay more than 35.0 cents--compared with a high of 43.0 cents in September 1964. Ex-vessel prices for troll salmon at Seattle averaged about 8.0 cents more than at coastal points in Washington and Oregon. Gill net-caught chinook salmon averaged about 30.6 cents a pound on the Columbia River and 36.9 cents in Puget Sound. For gill net-caught silver salmon Puget Sound fishermen were paid 26.6 cents a pound--slightly less than the 1964 average. Red salmon averaged about 33.6 cents in Puget Sound compared with 37.1 cents in 1964; and pinks brought seiners 12.2 cents a pound. Because of the small run of chum salmon, Puget Sound seiners averaged about 23.0 cents a pound--4.2 cents more than in the previous year.

The Indian fishery above Bonneville dam became a serious problem in 1965. The Indians increased their fishing effort at the time when both commercial and sport fishing were curtailed to permit a sufficient escapement of chinook salmon. The Indian

PACIFIC COAST FISHERIES

384

fishery reportedly used about 130 gill nets in the upper river at one time. Of the 80,000 chinook spawning escapement necessary to maintain the summer run at a satisfactory level, about 60,000 got past the Indian fisheries and less than 40,000 passed the various dams.

California salmon landings of 9.7 million pounds exceeded the 1964 catch by more than 250,000 pounds. The Eureka area (5.5 million pounds) had 56 percent of the State landings, followed by the San Francisco district (3.7 million pounds) with 38 percent, and the Monterey and Santa Barbara districts with the remaining 6 percent. A negligible amount was taken in the San Pedro and San Diego districts. The ocean troll fishery for chinook and silver salmon opened in California on April 15 and closed September 29.

Halibut. The catch of Pacific halibut was 63.5 million pounds (dressed weight) in 1965. U.S. landings of 30.5 million pounds were 4.1 million greater than in 1964 but were only 48 percent of the 1965 production. Canadian landings (33.0 million pounds) declined 601,000 pounds compared with 1964. For the third successive year, however, Canadians landed more halibut than United States fishermen. In 1965, Japan withdrew from the fishery on the triangle area above the Aleutian Islands.

The total landings represented an increase of 3.5 million over 1964. The gain was due principally to improved fishing in Area 2, which yielded 24.4 million pounds--4.8 million more than in 1964. Halibut production in Area 3B South declined to 3.9 million pounds from 4.7 million in 1964, and production from Area 3B North Triangle in the Bering Sea was only 550,000 pounds compared with 1.9 million in 1964. This was the area where United States and Canadian vessels caught 7.3 million pounds of halibut in 1963, the year it was opened to Japanese fishing. Only a 1-week season was allowed in the North Triangle area--from April 4 to 11. Area 3B North was divided into two areas: 3B Northeast--Bering Sea east of long. 175°W., outside the Triangle, which was open to halibut fishing from March 25 to June 20; and Area 3B Northwest--that part west of long. 175°W., which was open from March 25 to November 15. No catch limit was set for any of the Bering Sea areas. Early season halibut catches in the Bering Sea by United States and Canadian vessels were very light. The Japanese did not participate in the fishery. Area 3B (Southwest of the Shumagin Islands) opened April 12, with a catch limit of 4.0 million pounds, and closed September 20, with a catch of 3.9 million pounds. Area 3A (Cape Spencer to the Shumagin Islands) opened to halibut fishing May 1 with a catch quota of 34.0 million pounds and closed August 26; Area 2 (Cape Spencer to Willapa Harbor) opened May 1 with a quota of 23.0 million pounds, and closed September 15. Area 1 (north of Willapa Harbor) had no quota and opened and closed with Area A. The 63.5 million pounds landed on the Pacific coast exceeded the combined quotas for all areas by 1.6 million pounds.

The U.S. Pacific halibut catch, 40.5 million pounds (round weight) was valued at \$9.2 million--\$3.3 million more than in the previous year. The Alaska catch of 31.0 million pounds, worth \$6.8 million, accounted for 77 percent of the volume and 73 percent of the value compared with 1964. Record prices were paid for halibut in Alaska. Landings at Ketchikan averaged about 30.0 cents a pound and in central Alaska 21.1 cents a pound--up 34 and 46 percent, respectively, compared with the previous year. Such record prices in Alaska ports attracted vessels that usually sold in Seattle. Consequently, Washington landings of 9.4 million pounds valued at \$2.4 million declined 2.8 million pounds although the value increased \$81,000 compared with 1964.

Mackerel, Pacific and jack. California is the only Pacific Coast State that has a mackerel fishery. Landings of 73.7 million pounds were 42.8 million less than in 1964. Because of an ex-vessel price dispute the San Pedro mackerel fleet of about 40 vessels stopped fishing on December 19, 1964 and remained inactive (except for one night of fishing) until February 20, 1965. The dispute was finally settled when one company offered \$55 per ton--\$7.50 more per ton than in 1964. On February 22, all other Terminal Island canners made similar offers and fishing resumed. The fish, however, were scarce and catches were light. In March, April, and May rough weather hampered the fishery and resulted in the smallest catch in several years. In June the weather was favorable and the fishing good off the southern California coast, but during the remainder of 1965, bad weather continued to hamper the mackerel fishery. For the first time in the past 3 years, the southern California mackerel fleet did not tie up in December to negotiate prices; the fleet accepted an offer made by California canners early in the month. The new ex-vessel price for jack and Pacific mackerel became \$57 per ton.

PACIFIC COAST FISHERIES

365

Sablefish. Washington longliners landed 1.5 million pounds of sablefish--slightly less than in the last several years. Longline sablefish prices at Washington ports averaged 15.9 cents a pound compared with 15.6 cents in 1964.

Sardines. The Pacific sardine catch of 1.9 million pounds was 11.2 million (85 percent) less than in 1964 and the smallest catch on record. The 1965 sardine season for central California opened on August 1, with an ex-vessel price of \$70 per ton for sardines un-mixed with other fish. The southern California season opened on September 1, but a price dispute depressed the fishing until the latter part of the month. The fishermen and canners finally settled on \$70 per ton for sardines only. The bulk of the 1965 sardine catch was taken incidentally in the mackerel landings. Few loads had exclusively sardines.

Ocean perch. The U.S. fishery for Pacific ocean perch is confined to Washington and Oregon. In 1965, a record 28.4 million pounds valued at \$1.3 million was landed--a gain of 7.4 million pounds (35 percent) and \$335,000 (34 percent) compared with the previous year. This fishery has shown remarkable growth during the past 6 years. In 1960, the catch was 8.8 million pounds but, with the exception of 1964, it has increased steadily each year since then. During 1965, the trawlers began using "bobbins"--rubber rollers up to 18" in diameter which are designed to keep the trawls from snagging on the rough ocean bottoms. The bobbins apparently helped bring about some of the increase. Better handling has improved the quality of the fish and has expanded the markets.

Anchovies. The anchovy catch was 5.7 million pounds worth \$99,000--a gain of 758,000 pounds and \$17,000 compared with 1964. For several years industry members have requested permission to take anchovies in California waters for reduction. Finally, at a public hearing in San Diego, Calif., in November 1965, the State Game and Fish Commission approved the taking of 75,000 short tons of anchovies for reduction. The Commission granted permits to nine participating reduction firms. The 1965-66 season opened November 12, 1965, and was to end April 30, 1966, or as soon as the quota was filled. The quota established by the Commission permits the catch of 10,000 tons of anchovies north of Point Conception and 65,000 tons in waters south of Point Conception. At the end of the year, the quota had not been filled.

Crabs, king. The Alaska king crab industry soared to new heights in 1965 with continued improvement of the fleet and products, and expanded markets. The catch reached a peak 131.7 million pounds--an increase of 45.0 million (52 percent) compared with 1964. The value of \$12.7 million was \$4.5 million (55 percent) more than in the previous year. This industry has made a remarkable recovery since the 1964 earthquake. Many new processing plants have been built, and the new plants are using improved packing techniques and packaging materials for canning and freezing crab products.

Because of the rapid growth of the king crab industry, most king crab vessels have been converted from vessels originally designed for other fisheries. Although this trend continues, a growing number of new vessels now are being specifically designed for the king crab fishery. Deeper and more capable, the new vessels can operate in offshore waters more safely and effectively than in the past.

The Alaska King Crab Marketing and Quality Control Board, created by an act of the Alaska State Legislature and signed into law by the Governor in 1965, is composed of six Alaska residents recommended by the industry. The Commissioner of the Department of Fish and Game is an ex-officio member and is responsible for enforcement of the Board's decisions. The law became effective after 16 king crab processors, representing more than 51 percent of the operators in number and in poundage of king crabs processed, assented to the program. Only two processors opposed creation of the Board. The Board is supported financially by uniform assessments levied on processors. It is responsible for establishing and enforcing quality standards and maintaining stability of the industry and has authority to close plants that do not meet certain standards of quality and sanitation. At the Board's suggestion, the Bureau's Technological Laboratory in Ketchikan is seeking to develop a set of standards for grades of king crab meat.

In addition to the present markets along the eastern seaboard of the United States, the industry is expanding its markets abroad. In late 1965, the United Kingdom began importing Alaska canned king crab meat to help fill a growing demand that could no

PACIFIC COAST FISHERIES

longer be completely supplied, as in former years, by imports from Japan. The Japanese, in turn, had increased domestic consumption of king crab products, once almost exclusively an export commodity, and it appeared that another market for Alaska king crab meat had developed.

Crabs, Dungeness. Pacific coast landings of Dungeness crabs were 28.9 million pounds worth \$4.7 million--an increase of 5.9 million and \$700,000 compared with 1964. Landings of Dungeness crabs in Alaska were 8.9 million pounds--3.8 million (30 percent) less than in the previous year and about 560,000 pounds less than the 1961-65 average catch. The decline in Alaska production was caused principally by a shift to the king crab fishery and by the increased availability and catches of Dungeness crabs in Washington, Oregon, and California. Early in the year, Dungeness crab catches improved along the coasts of these States, but it was late in the season before the crabs were in sufficient strength to convince fishermen that the fluctuations of the past few years had passed and that they could look forward to good fishing.

Shrimp. Shrimp landings were 20.1 million pounds worth \$1.1 million--a gain of 5.6 million pounds and \$154,000 compared with 1964. The principal increase was in Alaska landings of 16.8 million pounds, which more than doubled the 7.7-million taken in the previous year. The greater landings resulted from favorable market conditions, construction of more processing facilities, and increased use of shrimp peeling machines.

Shrimp canning has made a reasonably strong comeback since the 1964 earthquake. Two plants in Kodiak and two in Wrangell canned shrimp in 1965. In Washington, 88,000 pounds of shrimp were landed in 1965--77 percent less than in the previous year. In Oregon, landings were 1.7 million pounds valued at \$148,000 compared with 5.3 million pounds worth \$449,000 in 1964. California landings of 1.4 million pounds were 328,000 pounds more than in the previous year. Shrimp fishing in California is governed by a yearly quota imposed on the fishery. In 1965, the season opened on June 1, and closed October 31. Nearly all the catch was marketed as fresh or frozen cooked meats.

A significant development in the shrimp industry occurred in 1965 when a Federal District Court jury found a Louisiana manufacturer of shrimp peeling machines guilty of practicing discrimination and using monopolistic practices in the rates charged to certain Alaska shrimp processors for the use of shrimp peeling machines. The jury awarded damages to the complainants.

Oysters. Oyster landings of 9.2 million pounds of meats worth \$2.2 million declined 800,000 pounds and \$400,000 compared with 1964. The decline occurred entirely in Pacific oysters--mostly in Willapa Harbor where the beds were damaged by "tidal" waves and by the shortage and high mortality of oyster seed. Oyster production improved in the Olympia shelter area. The production of both eastern and western oysters was slightly higher than in the previous year. Washington had 86 percent of both the volume and value, followed by California with 12 percent of both volume and value. The remaining 2 percent was landed in Oregon.

Clams. The clam production of 677,000 pounds of meats valued at \$370,000 increased 88,000 pounds and \$52,000 compared with the previous year.

Clam production in Washington was 546,000 pounds of meats worth \$299,000--both quantity and value were slightly larger than in 1964. Razor clams comprised 177,000 pounds of the Washington production. Only the small area between Copalis and Moclips continued to be open to commercial digging. The razor clam season opened March 10, and the quota of 125,000 pounds (shell weight) was reached in 6 days. About 50 percent of the catch was used for crab bait.

Despite a small increase in 1965, clams seem to be disappearing from the Pacific coast. The decline can be attributed to increasing numbers of "recreational" diggers, high cost of production, destruction of the Alaska razor clam industry and resource in the 1964 earthquake, and failure of Alaska razor clams to reach their previous abundance. In 1965, about 50,000 "recreational" diggers (clamming for sport) visited the ocean beaches of Washington and took about 800,000 razor clams (336,000 pounds)--nearly one-half as much as the entire Pacific coast commercial catch. Sport diggers were limited to

PACIFIC COAST FISHERIES

387

18 razor clams a day, but violation of catch limits and wastage of clams has become a major problem in the management of the stocks. Production costs for razor clams are higher than for Atlantic sea clams, because mechanical dredging for clams along the Atlantic coast is much more efficient than hand digging on the Pacific coast. Canned minced, sea clams are sold much more cheaply than razor clams.

Whale fishery. During the whaling season, the Del Monte Fishing Company and the Golden Gate Fishing Company operated their two shore stations on Point San Pablo, Calif., and Bioproducts, Inc. operated one plant at Warrenton, Oreg. As in 1964, Del Monte used the catcher boats Allen Cody, Dennis Gayle, and Donna Mae; Golden Gate used the Lynnann and Sioux City; and Bioproducts used the Tom and Al. The whaling season remained the same as in previous years--April 1 to November 30, inclusive, for sperm whales and April 15 to October 15, inclusive, for other whales. There were 243 whales taken in 1965--31 less than in the previous year.

The catch was processed into 2.8 million pounds of meal, 2.6 million pounds of oil, and 3.0 million pounds of meat (for use as canned or frozen animal food). These products were valued at \$628,000 to the producer--a decline of 23 percent in volume and 14 percent in value compared with 1964.

Other events. The F. E. Booth Company closed its tuna cannery at San Francisco, Calif., in March 1965, thus ending the operation of a firm that had been prominent in California seafood canning since 1903. In the early days of California fish canning this firm was a leading canner of sardines, anchovies, mackerel, and tuna. Their "Crescent" label was one of the first in canned sardine production, and the brand was widely distributed. The F. E. Booth plant was the second firm to close in the past 2 years. Its closing reduced the number of California canneries in operation to four on Terminal Island and one at San Diego. Meanwhile, a new tuna cannery costing about \$1.0 million was constructed on West Waterway in Seattle, Wash.

The Pacific American Fisheries cannery at Bellingham, Wash., (at one time the largest salmon cannery on the Pacific coast) closed, and the property was taken over by the Port of Bellingham.

Transportation. Movement of Alaska fishery products to markets in the contiguous States and in Europe now encompasses almost every form of modern transportation. Refrigerated jet and propeller airplanes carry fresh and frozen king crabs, salmon, and halibut from Alaska plants to worldwide markets in a matter of hours. For example, two companies in Cold Bay jointly clean, cook, and brine-freeze king crab in 200-pound cartons for shipments of up to 60,000 pounds a day to west coast consumers. The increase in air shipments prompted a paper company in Tacoma, Wash., to produce a lightweight, leakproof, moisture-resistant corrugated container for iced fresh seafoods. This container was approved by the airline companies.

The vessels of two Alaska steamship companies transport temperature-controlled vans laden with frozen fish and shellfish to Seattle from several Alaska ports. Two vessels owned by one company carried outstanding shipments of king crabs in 1965: The vessel Oduña carried a record shipment (574 tons) valued at \$1 million and the Fortuna carried a near-record load valued at \$900,000. The other steamship company operates two vessels between Anchorage and Kodiak, Alaska, and Seattle, Wash., calling at each port each week.

Frozen fish carried in refrigerated vans to Ketchikan, Alaska, from other southeastern ports served by the Alaska ferry system, were loaded into railroad cars at Ketchikan and shipped to Prince Rupert, B.C. on rail barges three times a week. A refrigerated express company, also Ketchikan based, shipped nearly 7 million pounds of fresh and frozen fish aboard the Alaska ferry system and over British Columbia highways to markets during 1965--increasing local fishermen's income 10 percent.

Regulations. The king crab pot limit of 30 per boat in Alaska was lifted in 1965. The use of trawls, however, for taking king crabs was prohibited in all areas under the jurisdiction of the Alaska Board of Fish and Game. Possession of "new shell" crabs between April 1 and June 15 was made illegal in lieu of closing the season between those dates. Minimum size for king crabs in the Bristol Bay and Alaska Peninsula area was set at 5-3/4 inches at the widest part of the shell.

PACIFIC COAST FISHERIES

Multiple-strand monofilament netting for use in gill net webs was made illegal by the Alaska Board of Fish and Game in 1965. The prohibition was aimed at a new product that would so greatly increase the effectiveness of gill net salmon fishing that the already short fishing periods would have to be further curtailed. Furthermore, the Board required that gill nets be equipped with a single cork of a contrasting color every 25 fathoms along the corkline.

The 350-mesh depth limitation on all purse seines was removed in 1965, and the size of the seine leads was increased from 25 to 75 fathoms to 25 to 150 fathoms.

In southeast Alaska, the fishing week opened on Sunday instead of Monday and closed on either Thursday or Friday, depending on the area. Fishing time remained the same. The season opened June 30 for Icy Strait, July 4 for Prince of Wales Island, and by field announcements for the remainder of southeast Alaska.

Fishing districts in the Kodiak area were adjusted to provide for more efficient management of the odd-year pink salmon run and a later and shorter season in the northern end of Cook Inlet afforded maximum protection to king salmon.

A law passed by the Alaska State Legislature in 1965, provided that salmon must be bought from the fishermen by the pound instead of by the fish as was formerly done. The new law was to become effective January 1, 1966.

Foreign fishing activities. The North Pacific Ocean, Gulf of Mexico, and Bering Sea are areas of increasing Soviet and Japanese fishing effort. During 1965, for example, the Food and Agriculture Organization of the United Nations reported 11.9 billion pounds (live weight) taken north of 40°N, in the North Pacific and Bering Sea. This was 1.3 billion pounds more than in 1964 and reflected the increasing fishing pressure in that area. Of the 11.9 billion pounds, the U.S. catch was less than 750 million pounds.

This was the 6th consecutive year of increased activity by the Soviet fleet in the North Pacific and Bering Sea. About 642 Soviet vessels, many of them the world's most modern and efficient craft, operated in international waters off the Alaska coast. This was about 152 more vessels than in the previous year. The expansion continued southward in 1965--about 30 vessels operated off the Washington-Oregon coasts.

In 1965, the Japanese operated 700 vessels in the North Pacific and Bering Sea in waters off the Alaska coast--the same number as in the previous year. The fleet was composed of 27 shrimp vessels, 68 fish-meal vessels (65 trawlers and 3 factory ships), 12 halibut and sablefish vessels, 12 crab vessels (10 trawlers and 2 factory), 380 salmon vessels, and 201 miscellaneous vessels.

Further information. Condensed summary data on the operating units and catch by States for the Pacific Coast fisheries appearing on the following pages have been previously published in Current Fishery Statistics No. 4356. Additional data on many aspects of the Pacific Coast fisheries appear in daily, monthly, and annual reports published by the Bureau's Fishery Market News Service offices in San Pedro, Calif., and Seattle, Wash. Specific data on several of the major fisheries of the Pacific Coast may be found in Section 12 of this publication.

Acknowledgments. The following organizations assisted the Bureau to collect the data appearing in this section: Alaska Department of Fish and Game, Washington Department of Fisheries, Oregon Fish Commission, and California Department of Fish and Game.

1/ INCLUDES THE VALUE OF HALIBUT LIVERS AND VISCERA AMOUNTING TO \$11,873.

2/ INCLUDES LINGCOD.

3/ THE ROUND WEIGHTS USED IN CATCH TABLES WERE OBTAINED BY MULTIPLYING NUMBER OF FISH BY THEIR AVERAGE WEIGHT. NOTE--THE ABOVE DATA INCLUDE CATCHES OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES LANDED BY VESSELS OF U.S. REGISTRY IN BRITISH COLUMBIA PORTS. ROUND WEIGHTS OF FISH TAKEN BY HALIBUT VESSELS WERE OBTAINED BY MULTIPLYING REPORTED WEIGHTS, REPRESENTING POUNDAGE OF FISH EVICERATED AND WITH HEADS-OFF, BY THE FOLLOWING FACTORS: HALIBUT 1.33; SABLEFISH AND ROCKFISHES, 1.43.

1/ THE SALMON CAUGHT BY HAUL SEINES WERE TAKEN ON INDIAN RESERVATIONS.

2/ FISHED ONLY ON INDIAN RESERVATIONS.

3/ BASED ON AN AVERAGE YIELD OF 22 POUNDS PER DOZEN.

4/ BASED ON A YIELD OF 25 PERCENT MEATS.

5/ BASED ON A YIELD OF 10 PERCENT MEATS FOR PACIFIC OYSTERS AND 18 PERCENT FOR WESTERN OR NATIVE OYSTERS.

NOTE:--THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDE 589 POUNDS OF LINGCOD LIVERS VALUED AT \$59.

PACIFIC COAST FISHERIES

LANDINGS BY HALIBUT FLEET AT SEATTLE, WASHINGTON

Landings of halibut at Seattle were 5.9 million pounds (dressed weight) valued at \$2.1 million. This was a decline of 1.9 million pounds (24 percent) but an increase of \$51,000 (3 percent) compared with 1964. Halibut landings from fishing grounds west of Cape Spencer (4.1 million pounds) were 2.1 million less than in the previous year, while those from grounds south of Cape Spencer (1.9 million) were 226,000 pounds greater.

Sablefish landings from fishing grounds off Cape Spencer (893,000 pounds) were 302,000 pounds less than in 1964.

The following tables contain a summary of the landings of dressed halibut and sablefish at Seattle by the U.S. halibut fleet. These data are not directly comparable with the State and sectional tabulations, since the weights in those tables represent the round weight of fish landed.

NOTE:--THE 1965 PACIFIC HALIBUT FISHERY SEASON OPENED ON MARCH 25 IN AREAS 3B NORTHEAST AND 3B NORTHWEST AND CLOSED ON JUNE 20 AND NOVEMBER 15, RESPECTIVELY. AREA 3B NORTH TRIANGLE OPENED APRIL 4 AND CLOSED APRIL 31. AREA 3B SOUTH OPENED APRIL 12 AND CLOSED SEPTEMBER 20. AREAS 1 AND 2 OPENED MAY 1 AND CLOSED SEPTEMBER 15. AREA 3A OPENED MAY 1 AND CLOSED AUGUST 26.

PACIFIC COAST FISHERIES

WHALING, 1965

During the whaling season, the Del Monte Fishing Company and the Golden Gate Fishing Company operated their two shore stations on Point San Pablo, Calif., and Bioproducts, Inc. operated one plant at Warrenton, Oreg. As in 1964, Del Monte used the catcher boats Allen Cody, Dennis Gayle, and Donna Mae; Golden Gate used the Lynnann and Sioux City; and Bioproducts used the Tom and Al. The whaling season remained the same as in previous years--April 1 to November 30, inclusive, for sperm whales and April 15 to October 15, inclusive, for other whales.

There were 243 whales taken in 1965--31 less than in the previous year. The take of fin whales declined markedly from 147 in 1964 to 114 in 1965. The capture of only 4 humpback whales was a sharp drop from the 27 and 55 taken in 1964 and 1963, respectively, and far less than the 199 taken in 1957. The small catch reflected the seriously depleted stocks of humpbacks. There were 22 sei whales taken--9 more than in 1964 but a decline of 75 compared with 1963. The catch of sperm whales (97) was the second largest in 25 years, exceeded only by the catch of 104 in 1961. Four blue whales were captured during the usual autumn passage of a few whales off the coast.

The catch was processed into 2.8 million pounds of meal, 2.6 million pounds of oil, and 3.0 million pounds of meat (for use as canned or frozen animal food). These products were valued at \$628,000 to the producer--a decline of 23 percent in volume and 14 percent in value compared with 1964.

PACIFIC COAST FISHERIES

FUR SEAL INDUSTRY OF THE PRIBILOF ISLANDS

Fur sealing on the Pribilof Islands produced 51,020 commercial sealskins during 1965, a decline of 13,186 from the previous year. In addition, 1,436 sealskins were taken for experimental processing and special collections. Male seals accounted for 41,216 commercial sealskins; the remainder, 9,804 were taken from female seals. The return of male fur seals was considerably below expectations. On the basis of observations made during the previous season a return of 53,000 male fur seals had been estimated. A shortage of 3-year-old bachelors accounted for most of the decline. Only 22,745 commercial sealskins were taken from 3-year-olds compared with 28,827 in 1964.

Classes of seals taken on the Pribilof Islands, by age group, 1965

ITEM	St. Paul Island		St. George Island	
	Male	Female	Male	Female
By age:	Percentage of kill			
2-year-olds.....	4	4	2	1
3-year-olds.....	56	25	55	14
4-year-olds.....	36	44	39	31
5-year-olds.....	4	15	3	18
6-year-olds.....	-	5	1	14
7-year-olds.....	-	4	-	8
8-year-olds and older.....	-	3	-	14
Total.....	100	100	100	100

NOTE: Percentage of male seals for season July 7 to August 9. Percentage of female seals for season August 16 to 27.

The number of female seals taken was slightly above the minimum needed to stabilize the herd at the optimum number. The commercial yield was 6,352 immature females and 3,452 mature. Skins of the immature females can be processed into a finished product that is comparable with the male sealskin. The mature female skins, however, have intrinsic qualities that make them less desirable for processed fur; however, the new close-shearing process has made these skins more valuable than before. Only 81 female sealskins were rejected because of poor quality.

Fur seal production on St. George Island was nearly 20 percent of the total harvest--about average for the long term period.

There were 380 pelagic sealskins taken in research at sea during 1965, and 880 during 1964. These skins were sent to the Fouke Fur Company to determine their commercial potential.

All adult male residents of the Pribilof Islands were employed in sealing and related work. From 23 to 26 men were employed in sealing on St. George Island and from 32 to 34 on St. Paul Island. Seventy-six men worked in skin curing and carcass disposal compared with 81 in 1964. Of these, 27 were residents of the Pribilof Islands, 24 were natives of the Aleutian Islands, 7 came from Alaska, and 18 were from the contiguous States. Incentive awards were given to top blubberers to encourage improved production. About 32 fur seal workers accepted off-season winter employment in the expanding king crab industry along the Aleutian Islands.

A supply of 150 fully processed but inferior quality sealskins and three boxes of scraps were donated to the Pribilof public schools for use by the Adult Vocational Training Program in developing local native arts and crafts.

PACIFIC COAST FISHERIES

The cold storage plant and handling procedures were improved. Bringing in the carcasses shortly after each killing resulted in an improved product. About 868 tons of frozen, ground seal meat were shipped out during the season.

Certain improvements in living conditions were made on the islands. In a continuance of Bureau policy to gradually merge St. George and St. Paul villages, two new residences were constructed at St. Paul. To forward this project, several pieces of heavy construction equipment were acquired from Government surplus. Several additional fuel storage tanks were installed on both islands. Conversion of heating systems from coal furnaces to oil burners and boilers is now almost complete on St. Paul. A new water treatment plant was also completed.

DISTRIBUTION AND TAKE OF SEALSKINS, 1965

The fur seal treaty provides that Canada and Japan each receive 15 percent of the skins taken on the Pribilof Islands. The distribution of sealskins follows:

Item	United States	Canada	Japan	Total
	<u>Number</u>	<u>Number</u>	<u>Number</u>	<u>Number</u>
From St. Paul Island:				
Male skins.....	23,842	5,109	5,109	34,060
Female skins.....	4,832	1,035	1,035	6,902
Total.....	28,674	6,144	6,144	40,962
From St. George Island:				
Male skins.....	5,010	1,073	1,073	7,156
Female skins.....	2,032	435	435	2,902
Total.....	7,042	1,508	1,508	10,058
From both islands:				
Male skins.....	28,852	6,182	6,182	41,216
Female skins.....	6,864	1,470	1,470	9,804
Grand total.....	35,716	7,652	7,652	51,020

NOTE: In addition 854 experimental young bull sealskins were distributed: 129 to both Canada and Japan and 596 to the United States.

The standard packing formula used in 1965 was 80 male skins, 80 immature female skins, or 65 mature female skins per barrel.

There were 227 barrels of seal blubber processed and packed for the Fouke Fur Company, which uses blubber oil exclusively for tanning sealskins. An additional 50 barrels of blubber were salted for future experimentation in extracting oil from blubber--to demonstrate the practicability of saving shipping costs by rendering oil at the point of origin.

SALE OF SEALSKINS, 1965

There were 38,067 fur sealskins sold for the account of the U.S. Government at the two public auctions held in Greenville, S.C. Gross receipts from both 1965 sales were \$3,178,385. Offerings consisted of 25,489 conventionally processed skins, which yielded \$2,609,296, and 12,578 female skins, which sold for \$569,089. The latter included 8,966

PACIFIC COAST FISHERIES

LAKODA sheared skins, which sold for \$468,801, and 3,612 natural sheared, which brought \$100,288. Average prices received were \$102.37 for conventional process, \$52.29 for LAKODA, and \$27.76 for natural sheared. In addition, 68 skins were sold at special sales for \$6,411.

Distribution of Pribilof Islands Receipts, fiscal year, 1965

Item	Amount
Cost of handling, processing, dyeing, and dressing.....	\$1,508,379
Cost of administration of Pribilof Islands.....	2,440,799
Payment to the State of Alaska.....	-
Net receipts to the U.S. Government.....	89,502
Total.....	4,038,680

NOTE: Figures shown in the above table are computed on a fiscal year basis. Those quoted in the preceding narrative are on a calendar year basis.

NUMBER OF SKINS TAKEN AND GROSS RECEIPTS FROM THE PRIBILOF ISLANDS FUR SEAL HERD, 1910-65

SECTION 8 - GREAT LAKES FISHERIES

447

The United States and Canadian catch of fresh-water fish from the five Great Lakes and three of the international lakes of northern Minnesota and Canada was 102.7 million pounds--a gain of 8.1 million compared with 1964. The greater production resulted from an increase in landings made by Canadian fishermen. The catch of alewives, chubs, and yellow perch increased, but there were reductions in landings of lake herring and smelt. Production of the two countries for the last 10 years averaged 109.0 million pounds.

Canadian production of 46.8 million pounds (up 8.9 million from 1964) was 46 percent of the total United States and Canadian landings. The 18.6-million pound catch of yellow perch in Lake Erie was 10.3 million (123 percent) greater than in the previous year and largely accounted for the increased production.

Commercial landings in U.S. waters of the Great Lakes and international lakes were 55.9 million pounds worth \$5.8 million--a decline of 782,000 pounds but an increase of \$260,000 compared with 1964. The increase in value over 1964 resulted from higher prices received by fishermen for yellow perch, white bass, lake herring, and chubs. Wisconsin led in volume of the catch with 20.1 million pounds followed by Michigan, 19.7; Ohio, 11.5; and Minnesota, 3.4 million pounds. New York, Pennsylvania, Indiana, and Illinois supplied the remaining 1.2 million pounds. The Great Lakes in order of production were: Michigan, Erie, Superior, Huron, and Ontario. The catch in Lake of the Woods (1.7 million pounds) accounted for 94 percent of the U.S. catch in the international lakes.

Fishermen and vessels. There were 2,364 fishermen, 375 vessels (5 net tons or more), and 1,113 other craft employed in the U.S. commercial fisheries of the Great Lakes. Fishermen on vessels averaged 100 man-days of fishing and vessels averaged 92 craft-days; fishermen on other craft averaged 40 man-days of fishing and other craft averaged 31 craft-days. There were 144,062 fishermen days and 68,486 craft days of operation--a decrease of 7,314 fishermen days and 4,812 craft days compared with 1964.

Fishing effort. Compared with 1964, total fishing effort decreased for the following gears: Pound nets, 1010 lifts; fyke and hoop nets, 4,250 lifts; haul seines, 279,000 linear yards; 4-to 7-inch mesh gill nets, 612,000 linear yards; and other trawls, 5,147 hours. The following gears showed increased effort: Trap nets, 413 lifts, 1-1/4-to 2-inch mesh gill nets, 127,000 linear yards; 2-1/8-to 3-inch mesh gill nets, 3,307,000 linear yards; and 7-1/8-to 14-inch mesh gill nets, 141,000 linear yards. A decline or increase in total fishing effort for a particular gear is usually caused by a low or high availability of one or more species. Weather, demand, and supply are also factors that influence the effort. Smaller smelt catches in Lake Superior resulted in fewer pound net lifts; a decrease in the fyke and hoop net fishery was caused by the lack of yellow perch in Green Bay. Weather and markets played an important part in the decrease in effort by other trawls. In addition, this gear was declared illegal in Lake of the Woods where it had been used for harvesting tullibee. Increased markets for smoked chubs caused the increase in fishing effort for 2-1/8-to 3-7/8-inch mesh gill nets.

Processed products. The value of processed fishery products in 1965 was \$30.1 million--an increase of \$8.0 compared with the previous year. Ohio continued to lead in the value of processed products. There were 256 wholesale and processing establishments operating in 1965 compared with 254 plants in 1964.

U.S. catch by lake.

Lake Ontario. The Lake Ontario catch of 217,000 pounds was 19 percent less than in 1964. The catch in this lake for the last 10 years averaged 243,400 pounds.

Lake Erie. The catch of 13.5 million pounds in Lake Erie was about the same as in the previous year. Yellow perch landings of 3.2 million pounds were 1.6 million larger than in 1964, but the catch of catfish, sheepshead, smelt, and white bass declined.

Lake Huron. Commercial landings of 4.7 million pounds in Lake Huron were 14 percent larger than in 1964. There were slight increases in the catch of carp, chubs, yellow perch, and yellow pike.

GREAT LAKES FISHERIES

Lake Michigan. The catch of 27.0 million pounds in Lake Michigan, the volume leader in 1965, was about 800,000 pounds more than in the previous year. Compared with 1964, there were greater landings of alewives, 14.0 million pounds (up 19 percent); carp, 2.0 million (up 53 percent); and chubs, 7.4 million pounds (up 44 percent). However, yellow perch landings of 1.3 million pounds were 78 percent less than in 1964.

Lake Superior. The commercial catch in Lake Superior yielded 8.7 million pounds--about 900,000 pounds less than in 1964. Landings of lake herring (4.7 million pounds) and smelt (1.2 million) declined 1.5 million pounds and 800,000 pounds, respectively; but the catch of chubs (2.1 million pounds) increased 1.3 million pounds compared with the previous year.

International lakes. Production in the international lakes was 1.7 million pounds--a decline from the 3.1 million pounds taken in 1964. Principal cause of the reduced landings was the legal restriction placed on use of otter trawls in Lake of the Woods. As a result, tullibee landings in this Lake dropped from 2.2 million pounds in 1964 to 844,000 pounds in 1965.

Sea lamprey control. The Bureau operated 16 electrical control barriers in streams along the south shore of Lake Superior to test the effectiveness of a selective lampricide being used to control the sea lamprey. The catch of 11,834 adult sea lampreys was much less than the record 67,230 lampreys taken in 1961. Initial stream treatments with the lampricide were completed for all Lake Superior tributaries, and in Lake Michigan, only five streams remain to be treated. Surveys to determine lamprey-producing streams were completed for all Lake Huron tributaries.

Research. The new Bureau research laboratory, located on the North Campus of the University of Michigan, was completed in August 1965. The building houses Bureau employees of the Branches of Biology, Fishery Statistics, and Technology; the Biological editing staff; ADP unit; and the Great Lakes Fishery Commission. Four research vessels, Cisco, Kaho, Musky II, and Siscowet continued to operate on the Great Lakes in support of research studies intended to aid management, conservation, and development of the Lake fisheries.

Other information. Condensed summary data on the catch of the Great Lakes fisheries appearing on the following pages have been previously published in Current Fishery Statistics No. 4225. Seasonal variations in the catch of fish landed in Wisconsin, Ohio, and Michigan can be ascertained from monthly landing bulletins issued currently in cooperation with the fishery department of these States. Additional specific data on Great Lakes fisheries may be found in the daily, monthly, and annual reports published by the Bureau's Fishery Market News Service office in Chicago, Ill.

Acknowledgments. The following organizations assisted in the collection of data appearing in this section: Dominion Bureau of Statistics of Canada; Illinois Department of Conservation, Division of Fisheries; Indiana Department of Conservation, Division of Fish and Game, Section of Fish Management; Michigan Department of Conservation, Fish Section, Great Lakes Fisheries; Minnesota Department of Conservation, Division of Game and Fish, Section of Fisheries; New York Conservation Department, Division of Fish and Game; Ohio Department of Natural Resources, Division of Wildlife, Section of Fish Management; Pennsylvania Fish Commission; and the Wisconsin Conservation Department, Fish Management Division.

1/ LESS THAN 50 POUNDS OR 50 CENTS.

SECTION 9 - MISSISSIPPI RIVER FISHERIES

The commercial catch of fish and shellfish from the waters of the Mississippi River and its tributaries was 84.8 million pounds worth \$7.8 million--a gain of 7.6 million pounds and \$461,000 compared with 1964. The larger catch resulted from an increased mussel shell harvest in Arkansas, Illinois, Indiana, Kentucky, Tennessee, and Wisconsin. The volume of mussel shells landed was more than double that of the previous year. The mussel shells are taken principally for export to Japan.

Six items--buffalofish, carp, catfish and bullheads, sheepshead, crawfish, and mussel shells--accounted for 94 percent of the volume and 92 percent of the value. The catch was made by 9,572 fishermen using 4 vessels, 8,075 motor boats, and 323 other boats--an increase of 115 fishermen, 146 motor boats, and 75 other boats compared with 1964. The number of vessels remained the same as in the previous year.

Wisconsin led in volume of landings (11.9 million pounds), followed by Louisiana, 11.8; Minnesota, 11.1; Tennessee, 9.0; Arkansas, 8.3; and Illinois, 7.3 million pounds. Louisiana was first in value of the catch with \$1.5 million.

The value of processed products was \$15.9 million--an increase of \$5.4 million compared with 1964. Missouri accounted for 39 percent of the total value; North Dakota, Oklahoma, Tennessee, and Texas together accounted for 27 percent. There were 417 wholesale and processing establishments operating in 1965 compared with 402 in 1964.

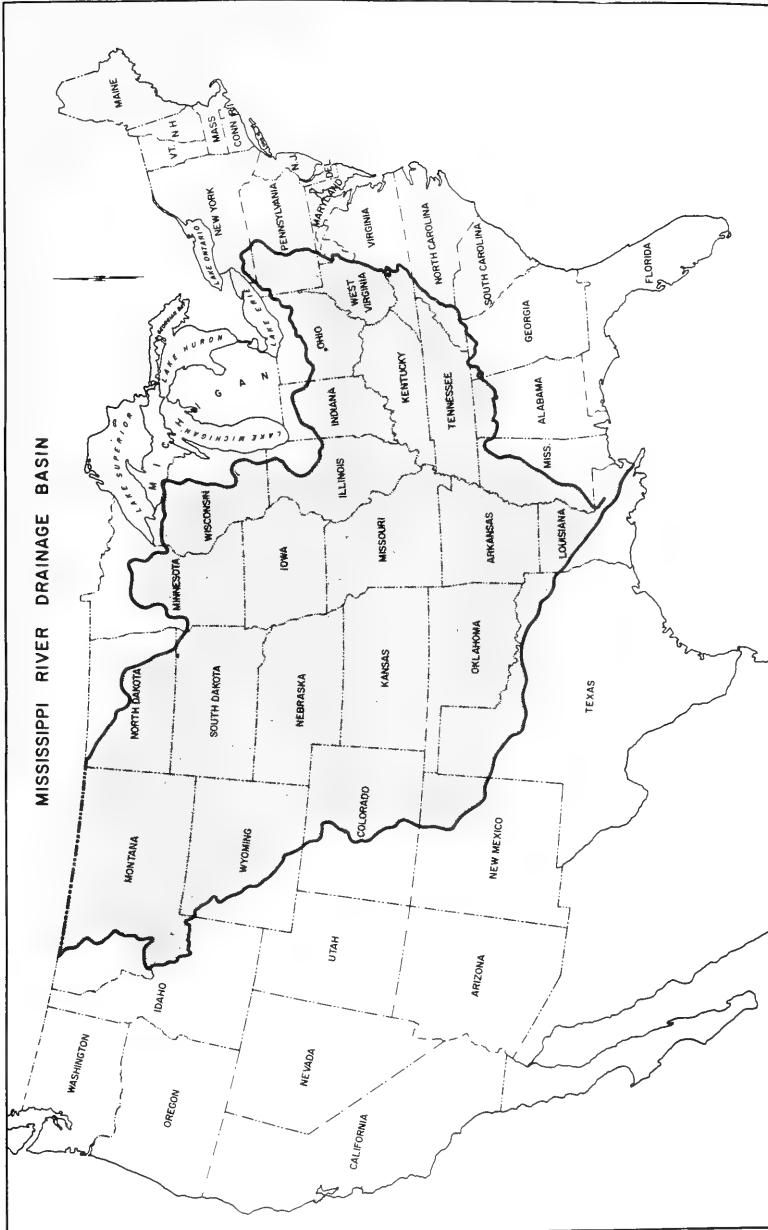

In 1965, as in the previous year, the Mississippi River Section includes data from river systems not connected with or draining into the Mississippi River as its tributaries. For example, salmon are reported in the Section. These were taken from waters draining into the Pacific Ocean. Catches are also reported from river systems draining north into Hudson Bay and south into the Gulf of Mexico.

Condensed summary data on the operating units and catch by States of the Mississippi River fisheries appearing on the following pages have been previously published in Current Fishery Statistics No. 4376.

The following organizations assisted in collecting data appearing in this section: Alabama Department of Conservation, Division of Game and Fish; Arizona Game and Fish Department; Arkansas Game and Fish Commission, Division of Fisheries; Colorado Game, Fish and Parks Department; Idaho Fish and Game Department; Illinois Department of Conservation, Division of Fisheries; Indiana Department of Conservation, Division of Fish and Game, Section of Fish Management; Iowa State Conservation Commission, Division of Fish and Game; Kansas Forestry, Fish and Game Commission, Fisheries Division; Kentucky Department of Fish and Wildlife Resources; Louisiana Wild Life and Fisheries Commission; Minnesota Department of Conservation, Division of Game and Fish, Section of Fisheries; Mississippi Game and Fish Commission; Missouri Conservation Commission; Montana Department of Fish and Game, Fisheries Management; Nebraska Game, Forestation and Parks Commission, Fishery Division; New Mexico Department of Game and Fish; North Dakota Game and Fish Department, Fisheries Division; Oklahoma Department of Wildlife Conservation, Division of Fisheries; South Dakota Department of Game, Fish and Parks; Tennessee Game and Fish Commission, Fish Management Division; Texas Game and Fish Commission, Inland Fisheries; Utah State Fish and Game Department; Wisconsin Conservation Department; Fish Management Division; Wyoming Game and Fish Commission; and the Tennessee Valley Authority, Fish and Game Branch.

CROWFOOT BAR

SECTION 10 - HAWAII FISHERIES

Landings of commercially caught fish and shellfish at ports in the State of Hawaii were 19.6 million pounds worth \$3.6 million--an increase of 6.9 million pounds (54 percent) and \$750,000 (26 percent) compared with 1964. The gain resulted principally from a record 16.2 million-pound-catch of skipjack tuna--up from 9.0 million in 1964, and the largest catch since the 1954 peak production of 14.0 million pounds. Early in 1965, the Bureau's Biological Laboratory in Honolulu had predicted the better-than-average skipjack landings. Tuna landings of all species were a record 17.4 million pounds.

In 1965, the State of Hawaii performed successful laboratory experiments designed to develop hatchery culture methods for mass cultivation of the Malaysian fresh-water shrimp (*Macrobrachium rosenbergi*). The overall aim was to establish eventually, if possible, a substantial shrimp industry within the State.

Fishery products were landed at six of the eight principal islands that form the State of Hawaii. Oahu led the islands in landings with 15.6 million pounds--80 percent of the total. The island of Hawaii was next with 2.8 million pounds, followed by Maui with 957,045 pounds. The remainder of the catch was landed at Kauai, Molokai, and Lanai. The 1965 catch was taken by 744 fishermen, who operated 57 vessels of 5 net tons and over, 324 motor boats, and 23 other boats.

The data in this section were assembled and prepared for publication by the Bureau's area office, Honolulu, Hawaii, largely from information collected by the Hawaii Department of Land and Natural Resources, Division of Fish and Game.

The following tables contain summarized and detailed information on the 1965 operating units and catch by islands of the State of Hawaii. Condensed summary data on the operating units and catch of Hawaii, appearing in the following pages, have been published previously in Current Fishery Statistics No. 4170.

HAWAII FISHERIES

SECTIONAL SUMMARIES

SECTION 11 - PUERTO RICO FISHERIES

533

The Puerto Rico catch is not included in the U.S. catch tables in the General Review or Review of Certain Major Fisheries sections.

Puerto Rico landings of 65.6 million pounds worth \$9.1 million to the fishermen were 7.1 million pounds and \$1.6 million greater than in 1964. The tuna catch--a record 54.6 million pounds valued at \$6.1 million--was 83 percent of the volume and 67 percent of the value of the Puerto Rico production.

Tuna landed by U.S. fishermen in Puerto Rico were caught only in the Pacific Ocean until 1962. In that year, however, 9 percent of the tuna catch came from the Atlantic Ocean; in 1963, 13 percent; 1964, 22 percent; and 1965, 5 percent.

The catch by local fishermen, consisting principally of marine fish, increased from 10.1 million pounds in 1964 to 11.0 million in 1965. Fishermen used various gear--mainly gill nets, haul seines, hooks (hand, troll, and long or set lines), cast nets, fish pots, and weirs.

PUERTO RICO FISHERIES

PUERTO RICO

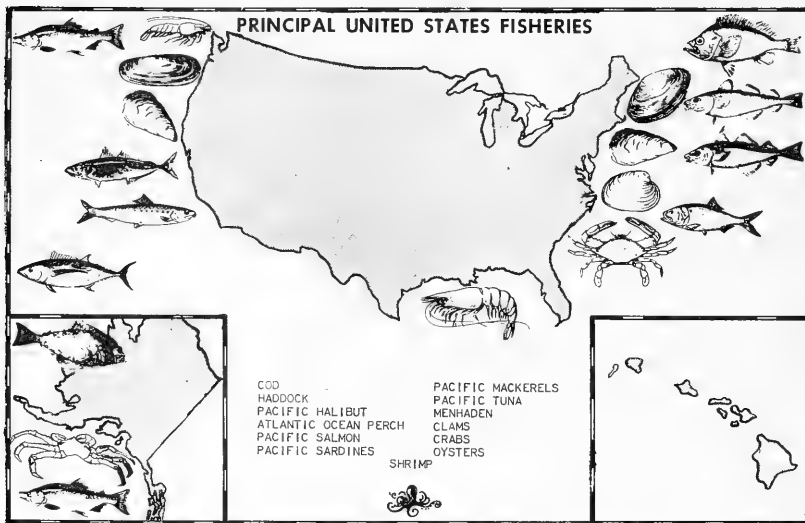

PUERTO RICO PACK OF CANNED TUNA, 1960-65

SECTION 12

REVIEW OF CERTAIN MAJOR FISHERIES

In this Section, there are complete data on the catch of certain major commercial species. Additional information is presented on the operating units for many of these fisheries. Most of the major species of fish and shellfish are taken by several types of fishing gear in two or more States. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data. The information contained in this Section includes operating units and the volume and value of the catch by types of gear by States and districts.

U. S. COD FISHERY

U.S. fishermen landed 46.2 million pounds of cod valued at \$3.4 million—an increase of 1.0 million pounds and \$400,000 compared with the previous year.

Otter trawls accounted for 88 percent of the catch; lines, 9 percent; and gill nets, 3 percent. A negligible amount was taken in pound nets, floating traps and dredges.

Landings at Massachusetts ports (32.2 million pounds) accounted for 70 percent of the total catch. The State of Washington was next with 10.0 million pounds, followed by Maine with 2.6 million pounds. The remaining catch was landed in nine other Atlantic and Pacific Coast States.

REVIEW OF CERTAIN MAJOR FISHERIES

ATLANTIC COAST HADDOCK FISHERY

The commercial catch of haddock was 133.9 million pounds valued at \$13.6 million-- a gain of about 400,000 pounds and \$1.8 million compared with 1964. The average price paid for haddock increased from 8.9 cents per pound in 1964 to 10.2 cents in 1965.

Haddock landings of 131.9 million pounds at Massachusetts ports (comprising 98 percent of the catch) were slightly greater than in the previous year. The catch by otter trawls accounted for 97 percent of the landings. The remaining 3 percent was taken by gill nets, lines, and dredges.

About 94 percent of the catch was taken from waters off New England--mainly on Georges South Channel. Waters off Nova Scotia yielded nearly all the remaining 6 percent.

REVIEW OF CERTAIN MAJOR FISHERIES

539

PACIFIC COAST HALIBUT FISHERY

Halibut landings by the combined United States and Canadian fleets were 63.4 million pounds (landed weight)--3.5 million pounds more than in 1964, but 11.7 million pounds below the 1962 record. U. S. fishermen landed 30.4 million pounds (48 percent) of the total and received \$9.2 million for their catch--\$3.3 million more than in 1964. The U. S. fleet operating out of Pacific Coast ports numbered 209 vessels, 1 less than in the previous year. Canadian fishermen landed 33.0 million pounds, a decline of 600,000 from 1964.

The catch limit of 34.0 million pounds set by the International Pacific Halibut Commission for Area 3A was unchanged from 1963 and 1964. The catch limit for Area 2, however, was lowered 2.0 million pounds to 23.0 million, and a quota of 4.0 million pounds was set for the Bering Sea. No catch limits were set in the remaining areas. During 1965 there were no Japanese longliners fishing in the convention waters of the Bering Sea.

Data on the landings of halibut in the following tables represent the dressed weight of the fish, i. e., the weight by which the quota is determined. The dressed weight of halibut can be converted to round weight by multiplying by 1.33. Halibut landed in Canada by vessels of U. S. registry is credited to Alaska.

1/ IN ADDITION THERE WERE APPROXIMATELY 41,000 POUNDS OF "NORTHERN" HALIBUT LANDED IN CALIFORNIA. MOST OF THIS CATCH WAS INCLUDED UNDER "CALIFORNIA HALIBUT" AND "UNCLASSIFIED FLOUNDERS".
 NOTE:--HALIBUT STATISTICS IN THESE TABLES WERE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL PACIFIC HALIBUT COMMISSION. STATISTICS FOR OTHER SPECIES WERE FURNISHED BY THE STATES.

ATLANTIC OCEAN PERCH FISHERY, 1965

The catch of Atlantic ocean perch was 83.6 million pounds valued at \$3.4 million--a decline of 5.7 million pounds (6 percent) and \$400,000 (11 percent) compared with 1964. The catch, which was the smallest since 1940, was 174.8 million pounds less than the record landings of 1951.

Maine and Massachusetts otter trawlers accounted for almost the entire catch, with only a negligible amount taken by longlines. Maine landings of 60.3 million pounds valued at \$2.4 million accounted for 72 percent of the volume and 71 percent of the value.

Of the total catch 37.7 million pounds (45 percent) were taken from the Gulf of St. Lawrence. Next was the Nova Scotia Banks with 28.8 million pounds (35 percent), followed by the New England coast, 15.4 million (18 percent); and the Grand Bank, 1.7 million (2 percent).

REVIEW OF CERTAIN MAJOR FISHERIES

541

PACIFIC COAST SALMON FISHERY

The commercial catch of salmon in the Pacific Coast States was 326.8 million pounds valued at \$65.1 million--a decrease of 25.4 million pounds, but an increase of \$9.1 million compared with 1964. The decrease of 36.8 million pounds in Alaska landings was responsible for all of the decrease since landings in Washington and Oregon were up 9.2 million pounds (43 percent) and 1.9 million pounds (20 percent), respectively. The value increased, in spite of lower landings, because of the increase of 90.8 million pounds (158 percent) in the higher priced red salmon, and the decrease of 82.6 million pounds (51 percent) in the lower priced pink salmon. Alaska landings of 274.8 million pounds were 84 percent of the Pacific Coast salmon landings.

The most important gear used in taking salmon in 1965 were gill nets which accounted for 169.5 million pounds (52 percent) of the total catch. Purse seines were second with 119.5 million pounds (37 percent). The remainder was taken by lines, haul seines, reef nets, pound nets, floating traps, dip nets, fish wheels, and other trawls.

REVIEW OF CERTAIN MAJOR FISHERIES

MACKEREL FISHERIES OF THE PACIFIC COAST, 1965

The catch of jack mackerel, 66.9 million pounds, and Pacific mackerel, 7.0 million, declined 23.1 million pounds (26 percent) and 19.8 million (27 percent), respectively, compared with the previous year. Combined mackerel landings of 73.9 million pounds worth \$2.1 million were 63 percent less in volume and 74 percent less in value than in 1964. Landings of jack mackerel were the smallest since 1959 and Pacific mackerel since 1927. The Pacific mackerel catch, however, was just slightly less than the 7.5 million pounds taken in 1953. Fishermen used mainly purse seines and lampara nets in the mackerel fishery.

REVIEW OF CERTAIN MAJOR FISHERIES

ATLANTIC COAST TUNA FISHERY, 1965

Tuna landings along the Atlantic coast were 5.0 million pounds worth \$375,000--4.2 million pounds and \$347,000 less than in 1964. Bluefin and skipjack landings declined substantially compared with the previous year.

There were 101 fishermen operating 9 purse seine vessels, 12 motor boats, and 4 other boats landing tuna in the New England, Middle Atlantic, and Chesapeake States. Purse seines took 85 percent of the catch (principally bluefin tuna); pound nets, 8 percent; and lines, 4 percent. The remainder was taken by harpoons, gill nets, and floating traps.

1/ LESS THAN 500 POUNDS OR \$500.

REVIEW OF CERTAIN MAJOR FISHERIES

551

PACIFIC TUNA FISHERY, 1965

The domestic catch of tuna landed at Pacific Coast and Hawaii ports was 313.9 million pounds worth \$41.4 million--a gain of 17.2 million pounds (6 percent) and \$2.7 million (7 percent) compared with 1964. Landings of skipjack (100.9 million pounds) and yellowfin (159.0 million pounds) were 34 percent and 6 percent more, respectively, than in the previous year. These increases offset a decline in the catch of albacore and bluefin tuna. Compared with 1964, landings of albacore (37.2 million pounds) and bluefin tuna (16.8 million pounds) declined 23 percent and 30 percent, respectively.

California-based tuna vessels made record trips in 1965. In March, the largest converted tuna seiner, Day Island, arrived in San Pedro, Calif. with a record trip of about 1,100 tons of tuna. Prior to this, the converted tuna purse seiners, Pilgrim and Puritan, had delivered slightly more than 900 tons of tuna each.

REVIEW OF CERTAIN MAJOR FISHERIES

U. S. MENHADEN FISHERY

Landings of menhaden totaled 1.7 billion pounds--an increase of 156 million pounds compared with 1964. Menhaden comprised 36 percent of the U.S. production of all species.

Of the total, 59 percent was landed in the Gulf of Mexico; 21 in the Chesapeake States; 11 in the South Atlantic States; and 9 percent in the Middle Atlantic States. Less than one-half of 1 percent was taken in the New England States.

Purse seines accounted for 97 percent of the catch. The remainder was taken by pound nets, haul seines, fyke and hoop nets, gill nets, otter trawls, and floating traps.

There were 2,722 fishermen, 161 vessels, 319 motor boats, and 15 other boats employed in the menhaden purse seine fishery.

REVIEW OF CERTAIN MAJOR FISHERIES

U. S. CLAM FISHERY, 1965

The clam fishery produced a record 70.8 million pounds of meats worth \$16.7 million --a gain of 6.4 million pounds and \$1.8 million compared with 1964, the former record year. Surf clams, landed chiefly in New Jersey, were 62 percent of the catch; hard clams, 21 percent; and soft clams, 16 percent. The remainder consisted of ocean quahogs, razor, and mixed clams. The Middle Atlantic States led with 74 percent of the catch, followed by the Chesapeake area, 15 percent; New England, 9 percent; and the Pacific Coast, South Atlantic, and Gulf States, and Hawaii, the remaining 2 percent.

Dredges took 56.3 million pounds (79 percent); tongs, 5.8 million (8 percent); and rakes, 4.0 million pounds (6 percent). The remainder of the catch was taken with hoes, forks, or shovels, or gathered by hand.

In Section 14 of this Digest, under the heading "Conversion Factors", there is a table which gives the average State yield per U.S. standard bushel for the clams taken on the Atlantic and Gulf coasts. Supplementary shellfish tables appear after the summary tables for each Atlantic and Gulf Regional section.

REVIEW OF CERTAIN MAJOR FISHERIES

U. S. CRAB FISHERY, 1965

The U.S. catch of crabs was a record 335.4 million pounds valued at a record \$30.8 million--65.0 million pounds and \$7.0 million more than in 1964, the former peak year.

The Pacific Coast States led in volume with 160.9 million pounds (48 percent) followed by the Chesapeake States, 86.3 million pounds (26 percent); the South Atlantic States, 46.4 million pounds (14 percent); and the Gulf States, 37.9 million pounds (11 percent). The remainder was landed in the New England and Middle Atlantic States and Hawaii.

The Alaska king crab fishery reached a peak production of 131.7 million pounds worth \$12.7 million--a gain of 45.0 million pounds and \$4.5 million compared with 1964, the former record year. Landings of Dungeness crabs in Alaska, 8.9 million pounds, were 30 percent less than in the previous year. The decline in Alaska production was caused chiefly by a shift in fishing effort to the king crab fishery and by the increased availability of Dungeness crabs in Washington, Oregon, and California. Hard and soft blue crab landings of 171.3 million pounds were 14.2 million more than the record 1964 production. The catch of blue crabs declined in the South Atlantic States but was up sharply in the Chesapeake and Gulf areas.

In Section 14 under the heading "Conversion Factors", is a table which gives the average number of crabs per pound by species for each of the Atlantic and Gulf States. Supplementary shellfish tables are shown after the summary catch tables for the Atlantic and Gulf States.

DUNGENESS CRAB POT

REVIEW OF CERTAIN MAJOR FISHERIES

U.S. OYSTER FISHERY, 1965

The oyster fishery produced 54.7 million pounds of meats worth \$27.9 million--a decrease of 5.8 million pounds (11 percent) compared with 1964. The value remained about the same as in the previous year. The catch declined principally in the Gulf States where a hurricane damaged or destroyed oyster reefs and fishing gear. Oyster production also declined in the Middle Atlantic, Chesapeake, and Pacific Coast States but increased slightly in the New England and South Atlantic areas.

The Chesapeake States led in production of oyster meats with a yield of 21.2 million pounds followed by the Gulf States, 19.2 million, and the Pacific Coast States, 9.2 million pounds. The New England, Middle Atlantic, and South Atlantic areas accounted for the remainder.

Dredges took 34.9 million pounds (64 percent) of the oyster harvest, and tongs, 17.9 million pounds (33 percent). Fishermen took the remainder of the catch with rakes and forks, or gathered it by hand.

In Section 14 of this Digest is a table which gives the volume of the bushel measures used for oysters in the various Atlantic and Gulf States and the average yield per bushel. Supplementary shellfish tables appear after the summary tables for each Atlantic and Gulf regional section.

REVIEW OF CERTAIN MAJOR FISHERIES

U. S. SHRIMP FISHERY

The U.S. shrimp catch was 243.6 million pounds valued at a record \$82.4 million--an increase of 31.8 million pounds and \$12.0 million compared with 1964. Landings of 195.2 million pounds along the Gulf coast were 16.2 million greater than in 1964, and accounted for 80 percent of the total production. The shrimp catch in the South Atlantic States (26.2 million pounds) and the Pacific Coast States (20.1 million) was 8.8 and 5.6 million pounds more, respectively, than in the previous year. The 16.8-million pound Alaska landings were up sharply from 1964 but Washington and Oregon landings declined.

The otter trawl fleet took 240.0 million pounds--99 percent of the total catch. An additional 3.6 million pounds were taken by haul seines, bag nets, beam trawls, pots and traps, push nets, cast nets, and brush traps.

The U.S. shrimp otter trawl fishery employed 16,790 fishermen on 3,707 vessels and 5,514 boats. Texas led in number of vessels (craft of 5 net tons and over) with 1,371; Louisiana was first in number of boats with 3,236.

REVIEW OF CERTAIN MAJOR FISHERIES

U. S. FISH OTTER TRAWL FLEET, 1965

The following tables contain information on the U.S. fish otter trawl fleet. The data include detailed information on the operating units in this fishery and a breakdown of vessels by area, State, and gross tonnage. The fish otter trawl fleet employed 4,990 fishermen on 1,171 vessels (craft of 5 net tons or more) and 112 boats. Forty-six vessels used two trawls, which brought the total number of trawls in use to 1,217.

1/ INCLUDES 4 VESSELS OPERATED IN LAKE WINNEBAGO, 2 OF WHICH ALSO OPERATED IN THE GREAT LAKES.

2/ INCLUDES MID-WATER TRAWLS.

SECTION 13

HISTORICAL FISHERY STATISTICS

Statistics of the fisheries of the United States are necessary for the best use of the Nation's aquatic resources. As series of data for extended periods of time are accumulated, the information becomes increasingly more valuable in indicating trends in the supply and utilization of fishery products. The extent to which these data are used is frequently dependent upon the ready availability of needed information to researchers, management officials, and members of the fishing industry.

The Bureau of Commercial Fisheries has in its files and in various Bureau reports or publications of other organizations a large volume of historical data. These statistics would be of considerable use to researchers and others interested in the fisheries. Unfortunately, few know of these records. To make the series readily available to researchers and others interested in the fisheries, a section entitled "Historical Fishery Statistics" has been published, since 1951, in "Fishery Statistics of the United States." The titles of the series published, and the identifying number of the Digest in which each appears, follows:

	Published in Statistical Digest	Revised and updated in Statistical Digest
	<u>Number</u>	<u>Number</u>
Menhaden Fishery	30	59
Oyster Fishery	34	59
Pacific Sardine Fishery	36	59
Atlantic Ocean Perch Fishery	39	59
Pacific Herring Fishery	41	59
United States Haddock Fishery	43	59
United States Tuna Fishery	44	59
United States Atlantic Cod Fishery	49	-
Fur Seal Industry of the Pribilof Islands	51	-
Eastern Pacific Halibut Fishery	53	-
California Mackerel Fisheries	54	-
Atlantic Mackerel Fishery	56	-
Commercial Fisheries of the Great Lakes	57	-
Potomac River Alewife Fishery; Hudson		
River and Potomac River Shad Fishery	58	59
United States Shrimp Fishery	59	-
United States Lobster Fishery	59	-
Atlantic Ocean Herring Fishery	59	-

The following pages include historical data on the United States shrimp fishery, United States lobster fishery, Atlantic sea herring fishery, and revised and updated data for other series as shown in the following table.

HISTORICAL FISHERY STATISTICS

SHRIMP FISHERY, 1887-1965

The shrimp fishery is our most valuable fishery. In 1965, the value of the catch exceeded \$82.4 million--\$12 million greater than in the previous year and 26 percent more than the second most valuable item, Pacific salmon. More than 16 thousand fishermen in over 3,500 vessels and 8,600 boats operated in this fishery in 1965.

Imports of shrimp increased from 40 million pounds in 1950 to 179.0 million pounds (heads-off weight) in 1965 and is the most valuable fishery item imported. In 1965, imports from 62 countries were valued at \$113.8 million and accounted for 54 percent of the total United States shrimp supply of 331.3 million pounds (heads-off weight).

The importance of the industry and the growing interest in data on shrimp, gave rise to the preparation of this report. No attempt has been made to record historical operating unit data. For detailed data on operating units for years since 1957, see the major fisheries section of Fishery Statistics of the United States. For years prior to 1957, refer to operating units by gear for each of the States in which shrimp were taken. To assist in locating data, there follows a reference guide to the information and the pages on which it appears.

CATCH:

	Page
New England States	583

1/ REVISU DATA FOR THE YEARS 1916-57 WERE DETERMINED FROM THE QUANTITY OF SHRIMP PRODUCTS PREPARED FOR MARKET BY MULTIPLYING THE WEIGHT OF DRIED SHRIMP BY 14.00, COOKED DATA FOR YEARS 1916-57 BY 31.57, AND HEADS-OFF SHRIMP BY 11.75. BEGINNING WITH 1958 THE CATCH WAS REPORTED ON A ROUND (LIVE) WEIGHT BASIS. 2/ DATA NOT AVAILABLE.

- 1/ "STANDARD CASES" REPRESENT THE VARIOUS SIZE CASES CONVERTED TO THE EQUIVALENT OF TWENTY-FOUR CANS (WET PACK) TO THE CASE, EACH CONTAINING 4-1/2 OUNCES OF SHRIMP MEATS. PRIOR TO 1947, BOTH WET AND DRY PACKS WERE PRODUCED.
- 2/ "STANDARD CASES" REPRESENT THE VARIOUS SIZE CASES CONVERTED TO THE EQUIVALENT OF FORTY-EIGHT CANS, EACH CONTAINING 16 OUNCES NET WEIGHT.
- 3/ DATA NOT AVAILABLE.
- 4/ LESS THAN 1,000 POUNDS OR \$1,000.
- 5/ INCLUDES RAW, PEELLED SHRIMP.

LOBSTER FISHERY, 1879-1965

The northern lobster (*Homarus americanus*) and the spiny lobster (*Panulirus argus* and *Panulirus interruptus*) comprise one of our most valuable fisheries for crustaceans, surpassed only by shrimp and crabs. In recent years it has ranked 7th in relative value of all commercial fish and shellfish. Lobsters are caught principally by pots or traps, although in recent years the otter trawl has been used to take northern lobsters along the continental shelf. The fishery for northern lobsters is confined to waters off the North Atlantic coast while the spiny lobsters are taken principally in waters off Florida and California.

Imports normally supply about 40 percent of the U.S. total supply of northern lobsters while imports of spiny lobsters furnish about 95 percent of the total U.S. supply of that species. Almost all of the northern lobsters are imported from Canada while spiny lobsters are received from a number of countries, with South Africa, Australia and the Bahamas supplying the most. Because of the importance of this fishery and the need for data, this report has been prepared. To assist in locating data, there follows a reference guide to the information and the pages on which it appears.

HISTORICAL FISHERY STATISTICS

ATLANTIC AND GULF COASTS MENHADEN FISHERY

The menhaden is taken in greater quantities than any fish occurring off the Atlantic and Gulf Coasts of the United States. The Indians are known to have used menhaden for fertilizer before the settlement of North America by the white man. Colonists soon recognized the value of the fish for this purpose and the use of whole fish for fertilizer was continued into the nineteenth century. The production of menhaden oil is reported to have been undertaken in Rhode Island in 1812 and in Maine about 1850. Rapid growth of an industry for producing both menhaden scrap and oil occurred between 1865 and 1875. In recent years menhaden have been landed in greater volume than any other fish taken by U. S. fishermen. The total catch since the establishment of the United States has exceeded 64 billion pounds, more than the production of any other species. Nearly the entire catch of menhaden is now used in the manufacture of meal and solubles used for animal feeding, and oil used in the manufacture of margarine and a wide variety of industrial products and processes.

Data on the catch of menhaden and on the production of menhaden products are available for most of the years following 1872. Since menhaden are landed at relatively few plants, the collection of data on the catch and production of menhaden products is comparatively simple. It is therefore believed that the following data have a high degree of accuracy.

SUMMARY OF THE MENHADEN FISHERY, 1873-1965

1/ DATA NOT AVAILABLE. 2/ DATA FOR CONNECTICUT ARE FOR 1900, WHILE THOSE FOR RHODE ISLAND, NEW YORK, DELAWARE, AND NORTH CAROLINA ARE FOR 1902. 3/ IN ADDITION 5,096,000 MISCELLANEOUS FISH WERE UTILIZED; THIS INCLUDES 180,000 IN CONNECTICUT AND NEW YORK; 4,900,000 IN MARYLAND AND VIRGINIA; 16,000 IN NORTH CAROLINA AND FLORIDA.

4/ A SMALL PRODUCTION OF ACIDULATED SCRAP HAS BEEN INCLUDED WITH DRY SCRAP AND MEAL.

NOTES--THE FACTOR 7.75 HAS BEEN USED TO CONVERT GALLONS OF OIL TO POUNDS FOR 1963-65; 7.5 HAS BEEN USED FOR PRIOR YEARS.

SOURCE--DATA FOR 1873 TO 1899, AND 1901 ARE FROM "AQUATIC PRODUCTS IN ARTS AND INDUSTRIES," BY CHARLES H. STEVENSON, REPORT OF THE COMMISSIONER OF FISHERIES, 1902; FOR 1906 TO 1911, 1913, 1914, AND 1920 FROM INFORMATION ON FILE IN THE BUREAU'S BRANCH OF FISHERY STATISTICS, WHICH WAS SUPPLIED BY AN IMPORTANT MENHADEN PRODUCTS BROKER; FOR 1912, FROM THE MENHADEN FISHERY OF THE ATLANTIC COAST, BY ROBERT LEON GREER, BUREAU OF FISHERIES DOCUMENT NO. 811; FOR 1915 TO 1919, FROM "CHEMICAL TECHNOLOGY AND ANALYSIS OF OILS, FATS AND WAXES," BY DR. J. LEWKOWITZSCH, M.A. F.I.C., SIXTH EDITION, VOL. 11; FOR 1921 TO 1938, "FISHERY INDUSTRIES OF THE UNITED STATES,"; FOR 1939 TO 1965, "FISHERY STATISTICS OF THE UNITED STATES,"; AND UNPUBLISHED BUREAU RECORDS.

FOR THE YEARS FOLLOWING 1920, INFORMATION COLLECTED IN THE SERVICE'S ANNUAL INDUSTRIAL FISHERIES SURVEYS HAS BEEN USED RATHER THAN THE SLIGHTLY MORE COMPLETE INFORMATION ASSEMBLED IN THE GENERAL CANVASS SURVEY OF THE ATLANTIC AND GULF STATES SINCE RELATIVELY FEW COMPLETE GENERAL CANVASS SURVEYS WERE MADE FOR ALL AREAS DURING THIS PERIOD.

SOURCE:--DATA FOR THE YEARS FROM 1882 TO 1955 WERE TAKEN FROM OCEAN RESEARCH NOTE 4 ENTITLED "HISTORICAL CATCH STATISTICS ON PACIFIC HERRING" WHICH WAS PREPARED FROM VARIOUS SOURCES BY O. E. SETTE, BIOLOGICAL LABORATORY DIRECTOR FOR OCEAN RESEARCH, STANFORD UNIVERSITY. DATA FOR THE YEARS FOLLOWING 1955 ARE FROM "FISHERY STATISTICS OF THE UNITED STATES."

HISTORICAL FISHERY STATISTICS

UNITED STATES HADDOCK FISHERY, 1880-1965

The haddock fishery is one of New England's most valuable fishery resources. These fish are found on both sides of the North Atlantic Ocean, attaining their greatest abundance in the North Sea, off Iceland, and on the New England, Nova Scotia, and Newfoundland fishing banks. Georges Bank, extending for 200 miles east of Cape Cod, Massachusetts, has been the chief source of the world's haddock supply and Boston, Massachusetts, the principal haddock port of the world.

The trend in U.S. haddock landings, prior to 1921, was determined principally by the capacity of the fresh market and distribution was confined mostly to areas near the ports of landings. Although the catch was generally marketed fresh and "in the round", quantities were also smoked, salted, and processed into fish cakes. Only since 1919 has haddock landings exceeded 100 million pounds annually. Prior to that year, landings never reached 90 million pounds. From 1880 to 1903 they maintained a fairly steady level averaging about 54 million pounds annually and from 1904 to 1918 they averaged approximately 77 million pounds per year. The record catch occurred in 1929 when 293.8 million pounds were landed.

In the early years of this fishery, the catch was taken mostly by hand lines and later by line trawls. In 1905 the first steam otter trawler began successful operations on the New England banks. A rapid transition to this method of fishing occurred and by 1915 the catch by otter trawls exceeded the amounts taken by all other gear. In 1921 the most important advance in fish processing, since refrigeration, was inaugurated when the industry began filleting and packaging haddock for sale in New England. In 1926 quick freezing became of commercial importance and it became practical to ship frozen fish, using dry ice as a refrigerant. Sales of haddock became nation wide. The trend toward filleting greatly increased the demand for haddock and the catch began an accelerating increase from about 91 million pounds in 1921 to 294 million pounds in 1929. However, production could not be maintained at the 1929 level and a precipitous decline occurred. In 1934 the catch was less than 165 million pounds. The history of the fishery for many species has indicated that when a new fishery is established, the catch increases rapidly for several years, holds steady for a few years, then declines and stabilizes at a lower level. This apparently happened in the haddock fishery for average landings since 1945 have been about 141 million pounds a year. The haddock has been studied intensively for many years and it has been determined that the catch from Georges Bank has declined as the result of an actual decrease in the abundance of larger sizes of fish.

The great increase in the use of small-mesh otter trawls and the decreased use of hand lines and line trawls have been prominent features in the decline of haddock. Lines, which originally accounted for the bulk of the catch, caught mostly large or medium sized mature fish. However, the small-meshed otter trawl indiscriminately gathers up everything in its path destroying millions of immature haddock too small to market. Additional study and experimentation by the Bureau of Commercial Fisheries showed that the most efficient way to prevent the destruction of potentially-valuable baby haddock was to limit the size of mesh used in otter-trawl nets. It was proven beyond doubt that the use of a larger mesh succeeded in releasing most baby haddock with little or no reduction in the catch of marketable fish.

Since the haddock fishing banks lie in international waters, it was not possible to bring them under regulations until the organization of the International Commission for the Northwest Atlantic Fisheries which was signed by eleven nations in 1949 and ratified by the United States in 1950. The Commission recommended legislation to Canada and the United States in 1952 and a larger mesh size went into effect for U.S. fishermen on June 1, 1953. Although studies of the effectiveness of the minimum mesh regulation in the North Atlantic haddock fishery are very encouraging, it will take many more years of close study to properly evaluate the benefits from this program in terms of improved abundance.

1/ ESTIMATED ON THE BASIS OF PACK AS REPORTED BY TUNA CANNERS.

2/ ESTIMATED.

3/ THE CATCH OF SKIPJACK AND YELLOWFIN HAS BEEN INCLUDED WITH THAT OF BLUEFIN.

4/ DATA NOT AVAILABLE.

5/ LESS THAN \$500.

6/ INCLUDES 132,000 POUNDS, VALUED AT \$32,000 LANDED IN ALASKA.

7/ INCLUDES 39,000 POUNDS, VALUED AT \$4,000 LANDED IN ALASKA.

NOTE:--HAWAII LANDINGS OF TUNA ARE NOT INCLUDED IN THIS TABLE. DATA FROM 1911 TO 1923 BASED ON STATISTICS PUBLISHED BY THE BUREAU OF FISHERIES; THE CALIFORNIA BUREAU OF MARINE FISHERIES (FISH BULLETIN NO. 74), AND THE U. S. TARIFF COMMISSION IN THEIR REPORT TO THE U. S. SENATE ON TUNA FISH, REPORT NO. 109, SECOND SERIES.

1/ DATA NOT AVAILABLE.

SECTION 14

STATISTICAL SURVEY PROCEDURE

This is another in a series of annual reports containing detailed statistics, analytic textual reviews, and graphic presentations on the commercial fisheries of the United States. Included are data on the quantity and value of the commercial yield of fishery products by States, sections, and gear; and the number of persons and operating units engaged in the fisheries. In the Great Lakes and Mississippi River Sections, the catch is also tabulated by water bodies. The publication contains data on the volume and value of processed fishery products, freezings and cold storage holdings, foreign trade, and other related information. The report has been prepared and published by the Bureau of Commercial Fisheries, Fish and Wildlife Service, U. S. Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Department of Interior, Commerce, Commerce and Labor, and the U. S. Fish Commission.

In order that those who use the statistical data contained in this and previous reports may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over many years, and changes in methods have been made at times when such changes have appeared to work toward general improvement. While the surveys in different sections are not made in the same manner, owing to varying facilities and records, an attempt has been made to make the data collected by various methods comparable with respect to the same year as well as over a period of years. Throughout the entire plan, it has been the intention to coordinate State and federal fishery statistical work so that there will be as little duplication of effort as possible.

SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the personnel of the Branch of Statistics. At frequent intervals, field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employ-

ment in the fisheries, quantity of fishing gear, number and classification of fishing craft, and the volume and value of processed fishery products. The various phases of these surveys are discussed in detail in the sections following.

H i s t o r y -- The first comprehensive statistical study of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the U. S. National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in the early survey and recorded in Mr. Goode's reports. The survey for 1880, however, did not include the Mississippi River and its tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for the years from 1880 to 1907 and from 1909 to 1928. The first complete statistical canvass of the entire United States was made for 1908 by the Bureau of the Census. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and its tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for these same sections were also collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on the wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Various sections were surveyed during the years from 1933 to 1949, inclusive. A complete survey of all sections of the country was made for 1950. Since 1951, all of the coastal areas have been canvassed annually, and catch records have been obtained for the Lakes section. Complete operating unit and catch data have been obtained for all areas since 1954, except that only a partial survey of the Mississippi River and its tributaries was made for 1961. Data on the wholesale and manufacturing industries were collected in all of the surveys from 1933 to 1940, inclusive. In the years from 1941 to 1949, inclusive, and in 1951, lack of experienced personnel and budgetary limitations precluded the collection of data on wholesale and manufacturing firms except for those data collected as part of the canned fishery products, industrial products, and packaged fish surveys.

STATISTICAL SURVEY PROCEDURE

The chart on page 717 indicates the years for which surveys have been made in the various sections. Figures for recent years are available from the Bureau in bulletin form, but data for the earlier years are available only in the Fish Commission and Bureau of Fisheries printed reports. These reports are on file in the Department of the Interior library and in many public libraries.

Since the surveys of the fisheries have varied in completeness, three legends have been used for the years shown in the chart to indicate whether complete, partial, or no surveys were conducted in the individual regions. The designation "complete survey" has been used to indicate that basic operating unit and catch data were obtained and that complete information was collected on employment in wholesale and manufacturing establishments and on the production of manufactured fishery products. The legend "partial survey" usually indicates that operating unit and catch statistics were collected, but that no information was obtained on employment in wholesale and manufacturing establishments and that only partial data were obtained on the production of manufactured fishery products. In some instances the designation "partial survey" is used for regions in which only catch statistics were collected. The legend "no survey" indicates that a general canvass was not conducted to obtain operating unit, catch, employment in wholesale and manufacturing plants, and complete manufactured products data. Although the chart indicates that in certain regions no surveys were conducted, some information may be available on the landings at certain important ports. Likewise, information on the catch of certain species, such as menhaden, may be available as a result of data collected in connection with the annual canned fish and byproducts survey. Data on the annual production of canned fishery products and byproducts have been collected for all regions since 1921, while information has been obtained on the production of packaged fish for 1926 and annually since 1928.

A bibliography listing the various surveys made since 1880 and the publications in which the results were published appeared in Statistical Digest No. 43, "Fishery Statistics of the United States, 1956." A list of the statistical bulletins in the Current Fishery Statistics series published during 1964 may be found in Section 17 of this Digest.

Field Personnel--The statistics contained in this volume have been collected by a group of trained fishery reporting specialists of the Bureau.

Period Covered--These specialists are assigned to field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. Most of the reporting agents collect statistics on landings for the current year, and assemble final operating unit, catch, and processed products data for the previous year. It is usually 3 to 10 months after the end of the calendar year for which they are collecting data before the final figures for the digest are available. The data are tabulated and prepared for publication before the end of the year. The figures are collected and published on a calendar year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Since 1930, they have been collected on a calendar year basis.

Scope--The coastal statistical surveys include canvasses of the commercial fisheries of the oceans, bays, and coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics on the fisheries of the Mississippi River include those of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is carried on. Statistics on the fisheries of the Great Lakes cover canvasses of the fisheries in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries in Lake Okeechobee and other inland lakes. Surveys for statistics of the wholesale and processing fishery industries cover plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

Methods of Collection--There are several methods used in the collection of fishery statistics, each of which has been carefully

STATISTICAL SURVEY PROCEDURE

studied to obtain the best results with available personnel and funds. In the preparation of operating unit data, the field personnel are supplied with a deck of pre-punched vessel cards obtained from the Bureau of Customs. These cards indicate the name, official number, rig code, gross tonnage, length, and year built. Field personnel enter the number of crewmen, and number and type of gear used by the vessel. These data are obtained by interview. Data on the craft of less than 5 net tons are obtained from State conservation agencies and by contact with firms purchasing fish or shellfish from fishermen. The data thus obtained are machine processed to ensure accuracy.

Data on over 96 percent of the catch are available from summaries of monthly landings bulletins and other current records assembled by the Bureau or the various States. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited, and data are obtained from them on their purchases of fish and shellfish. It is impossible for the few Bureau representatives available for this work to interview each fisherman in a given locality. However, the more important areas and a sufficient number of areas of lesser importance are visited to obtain reliable information on production, the number of fishing craft engaged, the quantity of gear operated, catch by gear and waters, and the number of persons employed as fishermen.

The Bureau's role with regard to fishery statistics is principally that of coordinating the collection of information, assembling, analyzing, publishing, and disseminating fishery data. The collection of basic operating unit and catch statistics is primarily a State function. The State fishery agencies in a number of States have developed relatively complete statistical systems which greatly facilitate the Bureau's surveys in these States. In such instances, the Bureau conducts only such surveys as may be necessary to make the data comparable with those of other States.

The Bureau obtains from the records of the State fishery agencies most of the catch statistics for the fisheries of the Great Lakes, the northern Mississippi River area, and the International Lakes of northern Minnesota. To obtain data on the number of fishermen, boats, vessels, and gear, the Bureau conducts such personal surveys among the fishermen as may be necessary

to supplement the State records.

Bureau statistical personnel are stationed at Seattle, Wash. and San Pedro, Calif. for the purpose of surveying the fisheries of Washington, Oregon, and California. They obtain from the records of the State fishery departments figures on the volume of the catch and operating units. The value of the catch is derived from State and dealers' records. In Washington and Oregon, data for operating units in the offshore fisheries are obtained from the records of various fishery organizations as well as from records of the State fishery agencies. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In many States, the Bureau and the fishery agency of the respective States cooperate in the collection and publication of current monthly and annual data on the catch. These data form the basis of the annual catch figures published in this report for the following States: Maine, Massachusetts, Rhode Island, New York, New Jersey, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, California, Ohio, Michigan, and Wisconsin.

In the administration of the Alaska fisheries, the State requires that copies of all receipts for fish and shellfish purchases from fishermen be furnished to the Alaska Department of Fish and Game. The data on these tickets are compiled and made available to the Bureau. The summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish in the Great Lakes States usually are shown in weights as landed, which may be in the round or drawn condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are usually shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks, and the round weight of crustaceans and such cephalopods as squid and octopus.

Shore and Vessel Fisheries--In general, statistics of the shore fisheries, as collected by the Bureau's representatives, include

STATISTICAL SURVEY PROCEDURE

719

data on the number of casual and regular fishermen; number of motor and other fishing boats (craft of less than 5 net tons capacity are called "boats"); type and quantity of gear used; and the volume, value, and method of capture of each species for each locality or group of localities. This method is not followed in some sections where the availability of data collected by the State fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number in the crew; rig of vessels; gross tonnage; kind and quantity of gear used; and volume, value, and method of capture of each species. Craft having a capacity of 5 net tons or over are called "vessels." As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of Bureau agents collecting these data for individual vessels. Information on the year vessels were built was assembled for 1961.

Statistics on the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not reported.

All persons engaged in commercial fishing operations are included as fishermen. In most areas, fishermen not on vessels have been divided into "regular" and "casual". Regular fishermen are defined as those who receive more than one-half their annual income from fishing, whereas casual fishermen are those who receive less than one-half their annual compensation from fishing. It has not been possible to separate regular from casual fishermen on the Pacific Coast.

Since 1942, the catch of fish and shellfish has been credited to the port at which it was landed. Prior to the survey for that year, it was the practice of the Bureau to credit the entire catch of a vessel to the principal port at which fish or shellfish were unloaded, regardless of the actual point of landing. This policy was discontinued since it quite often resulted in inconsistencies by crediting catches of some species to areas far removed from localities in which they are commonly taken. An outstanding example of this is the southern trawl fishery conducted off the New Jersey, Maryland, Virginia, and North Carolina coasts. Some fishing vessels from New England operate in this fishery for 6 to 10 weeks during the winter season. Prior to the survey for 1942, the catch of these vessels, consisting principally of fish common to Middle Atlantic waters,

was credited to Massachusetts. Under the present system, this catch is credited to the Middle Atlantic ports where it is landed.

Since 1949 on the Pacific Coast and 1951 for the remainder of the country, craft, fishermen, and gear have been reported for each State in which they fished. A total exclusive of duplication is shown for each section and for the United States as a whole. Prior to the surveys for 1949, each craft on the Pacific Coast was credited to its home port unless it did not fish from that port during the year. In that case, it was credited to the locality where it landed the greatest portion of its catch. Prior to the survey for 1951, each craft on the Atlantic and Gulf Coasts and interior waters was credited to the port where it landed the greatest portion of its catch during the year. This system was changed to provide more accurate data on the total number of craft operating in a given State. With the increased mobility of the fishing fleet in recent years, the number of vessels fishing in more than one State has increased greatly.

Beginning with data for 1951, the reporting of units of gear was standardized so that nets or lines made up of small units for ease in handling, but fastened together in fishing, were counted as a single unit rather than as a number of smaller units. Prior to 1951, the small units were sometimes counted as individual pieces of gear even though they were combined for fishing. This rule does not apply to halibut longlines or setlines on the Pacific Coast. In this fishery, each skate of gear is counted as one line, even though fastened together in fishing, because the International Pacific Halibut Commission uses a skate of gear as a unit in its studies of fishing intensity.

Beginning with 1962, only summary data have been shown on the number of fishing gear operated in the Great Lakes and the International Lakes of northern Minnesota. These data appear in the General Review section of the Digest in the table "Summary of Operating Units." In detailed operating unit tables for these lakes, the number and size of gear have been replaced by information on the fishing effort expended in the operation of each gear.

Publication of Data--Statistics on employment in the fisheries, craft and gear engaged, quantity and value of catch, and certain data on industries related to the fisheries are summarized according to geographic divisions and published in bulletin form as soon as possible after the completion of each survey. Later, the figures, in more detail, are included in the

STATISTICAL SURVEY PROCEDURE

annual statistical report of the Bureau entitled "Fishery Statistics of the United States."

Data on the operating units (fishermen, fishing craft, and gear) and catch by counties for the Atlantic and Gulf States have been included in these annual statistical reports for the years from 1928 to 1938 except for 1932. These data have also been published in the digests for the years 1945, 1950, 1955, and 1960. County data were collected for the State in which surveys were conducted during the years since 1938, except for Maryland. Between 1942 and 1959, only operating unit data by counties have been obtained for Maryland. Complete data were obtained for 1960. County data assembled for the years since 1938, which were not published in the Digest, are on file in the Washington office of the Bureau.

LOCAL AND SPECIAL SURVEYS

Landings at Certain Massachusetts Ports--Detailed statistics are collected on the landings of aquatic products by individual fishing craft at Boston, Gloucester, New Bedford, Plymouth, Provincetown, and other Cape Cod ports. Bureau representatives are stationed at the principal ports. They obtain figures on the quantity and value of fish landed daily by fishing craft, the dates of departure and arrival of the craft, the gear used in their capture, the grounds from which the fish were taken, and other related information. The Bureau's Division of Biological Research and Branch of Market News cooperate in the collection of these data.

Statistics on landings at the above ports are released monthly and annually in bulletin form, and summary data are published in the annual statistical digest. Products of American fisheries received duty free at Boston and Gloucester from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester have been collected annually since 1893. Information on landings at New Bedford has been collected annually since 1938; and at Plymouth, Provincetown, and other Cape Cod ports, since 1945.

Shad and Alewife Fisheries--Owing to the importance of the Hudson and Potomac

Rivers in the production of shad, surveys for statistics on the catch, value of the catch, and operating units are made annually. On the Potomac River, similar statistics are also obtained for the alewife fishery. Much of the data required for these surveys is available from the States fishery agencies.

Annual data on the shad and alewife fisheries are not published separately in bulletin form. However, a summary is published in the annual statistical digest.

Statistics on the Hudson River shad fishery are available for 1896, 1897, 1898, 1901, 1904, 1910, and continuously since 1915. Data for the Potomac River shad fishery are available for 1896, 1901, 1904, 1909, 1915, from 1919 to 1942, inclusive, and continuously since 1944. Statistics on the Potomac River alewife fishery are available for 1896, 1909, 1915, from 1919 to 1942, inclusive, and continuously since 1944.

Pacific Halibut Fishery--Statistics on the Pacific halibut fishery are obtained primarily from the International Pacific Halibut Commission. Beginning with data for 1956, the fleet classification of halibut craft was revised and vessels were credited in operating unit tables to each district in which they landed fish; the only exception being that U.S. vessels landing at Prince Rupert, British Columbia, are credited to Southeastern Alaska. Duplication of halibut craft which operated in more than one district has been eliminated in regional and national totals. The catch by the halibut fleet is credited to the port of landing except that fish landed by U.S. halibut craft in British Columbia is credited to Southeastern Alaska. Halibut statistics are also included in the monthly and annual summaries published by the Seattle Fishery Market News Office. Statistics on the landings of halibut at Pacific Coast ports have been collected since 1925.

South Atlantic and Gulf of Mexico Shrimp Fishery--Detailed statistics on the quantity and value of shrimp, by variety and size, landed at South Atlantic and Gulf ports, have been collected for the Gulf area since 1956 and the South Atlantic since 1957. Since 1956, Bureau personnel have also obtained daily information on the number of fishing trips, area and

STATISTICAL SURVEY PROCEDURE

721

depth fished, and time spent in fishing by craft landing at U.S. ports in the Gulf of Mexico. The Branch of Market News, the Bureau's Branch of Marine Fisheries of the Division of Biological Research, and various fishery agencies of the southern States cooperate in the collection of these data.

Detailed monthly and annual summaries of the statistics on shrimp catch and landings are published in bulletin form and are summarized in the annual statistical digests.

Hawaiian Fisheries-- The common and scientific names of the species of fish and shellfish landed in Hawaii are not included in Section 15 of this report.

Historical Fishery Statistics-- The Bureau of Commercial Fisheries has in its files and in various Bureau reports or publications of other organizations a large volume of historical data on fisheries. Beginning with the 1951 Digest, a section entitled "Historical Fishery Statistics," which includes complete historical information on selected species, has been carried. There is published each year a listing of the titles of the series of data appearing in earlier editions.

Review of Certain Major Fisheries-- Beginning with 1942, tabulations containing complete data on the catch of certain major species have been included in a section of the Digest entitled "Review of Certain Major Fisheries." Although the data are included in the detailed catch tables of the various States, they are consolidated in this section to provide a single source of data for cod, haddock, halibut, Pacific mackerel, jack mackerel, menhaden Atlantic ocean perch, salmon, tuna, oysters, clams, crabs, and shrimp. Data on operating units in the following fisheries have likewise been consolidated in this section: halibut, salmon purse seine and troll line, Atlantic and Pacific Coast tuna, menhaden purse seine, fish and shrimp otter trawl.

Canned Fishery Products and Industrial Products-- Since 1921, the Bureau has made annual sectional surveys for statistics on canned and industrial fishery products. These surveys are started the first week in January of each year for statistics on the production in the preceding year. So far as possible, the Bureau obtains by mail statistics on the annual production of each domestic canned and industrial fishery products plant. If it is impossible to obtain the information by mail, the report is secured by a Bureau representative. Included in the data obtained are statistics on the yield and value of the canned products by type of commodity, can size, and area of production. Data on industrial products are obtained by commodity and area of production. The value shown for canned and industrial products is the gross amount received by the packer at the production point. No deductions are made for commissions or expenses.

Annual statistical bulletins are issued on this trade, and detailed data are published in the statistical Digest. Prior to 1921, canned and industrial products data were not collected for the entire country. However, data on the production of these products were usually obtained for the areas in which general canvass surveys were conducted.

Fish Meal and Oil-- Data are collected monthly on the domestic production of fish meal, body oil, fish solubles, and homogenized condensed fish. This information is released monthly and annually in the Bureau's Current Fishery Statistics series of bulletins.

Packaged Fish Trade-- Statistics on the annual production and value of fish packaged in the United States, excluding the States of Alaska and Hawaii, are obtained in conjunction with the canned and industrial fishery products survey. These data are released annually in bulletin form and in the annual statistical digest. Statistics on the production of packaged fish are available for 1926 and annually since 1928, except that no data were collected in California for the years 1941 to 1946, inclusive.

Fish Sticks and Portions-- Quarterly information is collected and published on

STATISTICAL SURVEY PROCEDURE

the production and value of cooked and raw fish sticks and breaded, cooked, and raw fish portions, and unbreaded fish portions. The data are released in the Bureau's Current Fishery Statistics series of bulletins.

Cold-Storage Holdings of Fish--Information on the monthly freezings and holdings of fishery products is obtained from cold storage warehouses by mail and by Bureau employees. Data are also obtained on the holdings of certain cured fish. Bulletins showing these statistics are issued monthly and annually.

Detailed cold-storage statistics also are published in the Bureau's annual statistical digest. Information regarding cold-storage holdings of fishery products has been published since 1917, while data on the quantity of fish frozen have been released for the years from 1920 to 1925, inclusive, and continuously since 1928.

Foreign Fishery Trade--Statistics on foreign fishery trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics on all known imported or exported fishery products have been assembled and published annually since 1926 in the Bureau's statistical digest. For earlier years, figures are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

PRACTICES AND TERMS

Certain practices and terms used in this report are explained below.

Operating Units--Operating units include persons employed in the fisheries, and craft and gear engaged in the fisheries.

Vessel--A craft having a capacity of 5 net tons or over.

Boat--A craft having a capacity of less than 5 net tons.

Days Absent--In computing "days absent" for vessels landing fares at certain Mas-

sachusetts ports, the day of arrival, but not the day of departure, is included; thus, a vessel leaving port on the 8th of the month and returning on the 15th of the month will be credited with 7 days absence. Prior to 1944, "days absent" included both the day of departure and the day of arrival.

Days Fished--In computing "days fished" for fishing craft landing shrimp at Gulf of Mexico ports, the total number of hours spent in fishing effort has been divided by 24.

Fish--The term "fish" as used in this report includes all species belonging to the class Pisces.

Shellfish, etc.--A shellfish is an aquatic invertebrate animal having a shell, such as a mollusk or crustacean. However, in order to reduce the classifications appearing in the catch tables, all items not properly listed as "Fish" or "Whale Products" have been included under "Shellfish, etc." Accordingly, turtles, frogs, sponges, seaweed, and worms are included under this classification.

Whale Products--Since data are not available on the poundage of whales taken, statistics appearing in catch tables on the yield of these mammals represent the weight of products produced such as meal, sperm oil, whale oil, etc. The values shown represent the amount received by the manufacturer for the products.

Incidental Catch--The term "incidental catch" refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

Percentages--Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, odd integers are raised to the next even figure while even integers remain unchanged.

Converting--Many of the figures shown in the summary tables published herewith have been converted to thousands of pounds or thousands of dollars. In making these conversions the sum of the items in a table is raised or low-

STATISTICAL SURVEY PROCEDURE

ered to the nearest thousand in accordance with standard statistical procedures. The individual items are adjusted to conform to the total thus obtained.

Confidential Data-- The statistical data collected by the Bureau are confidential, and unless specific authorization is given, are not released in a manner that would divulge private enterprise.

CONVERSION FACTORS

It is the policy of the Bureau to show detailed catch figures of all products in pounds for the sake of uniformity and for purposes of comparison. This represents little difficulty in the case of fish, since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, numbers, gallons of meats, etc. So many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various states, the problem becomes even more complex.

All univalve and bivalve mollusks (except fresh-water mussel shells) are reported in pounds

of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production in number of certain other shellfish, such as crabs. There also is included in the General Review section of this report a table containing data on the shell weight of univalve and bivalve mollusks taken.

Oysters-- Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf Coasts is reported to Bureau personnel in bushels. Prior to the data obtained for the year 1930, bushels were converted to pounds of meats on the basis of a uniform yield of 7 pounds of meats to the bushel. However, it was found that there was considerable variation in the yield of oysters per bushel particularly in southern states where the yield has ranged as low as half the conversion factor used prior to 1930. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

COASTLINE OF THE UNITED STATES

Graphic measurements on lengths of coastline and tidal shoreline of the United States have been made from time to time by the U.S. Coast and Geodetic Survey on maps of various scales and in units of various lengths. The three types of measurement are explained in the following paragraphs.

GENERAL COASTLINE.--The figures under this heading are lengths of the general outline of the seacoast. The measurements were made with a unit measure of 30 minutes of latitude on charts as near the scale of 1:1,200,000 as possible. The shoreline of bays and sounds is included to a point where such waters narrow to the width of the unit measure, and the distance across at such point is included.

TIDAL SHORELINE, GENERAL.--Measurements under this heading were made with a unit measure of 3 statute miles on charts of 1:200,000 and 1:400,000 scale when available. The shoreline of bays, sounds, and other bodies of water is included to a point where such waters narrow to a width of 3 statute miles, and the distance across at such point is included.

TIDAL SHORELINE, DETAILED.--The figures under this heading were obtained in 1939-40 with a recording measure on the largest scale maps and charts then available. Shoreline of bays, sounds, and other bodies of water is included to the head of tidewater, or to a point where such waters narrow to a width of 100 feet.

COAST AND GEODETIC SURVEY

STATISTICAL SURVEY PROCEDURE

INLAND WATER AREAS BY STATES

Available information on the inland water surface area by States is listed below. These data include lakes, reservoirs and ponds having 40 acres or more of area; streams, sloughs, estuaries, and canals one-eighth of a statute mile or more in width; deeply indented embayments and sounds, and other coastal waters behind or sheltered by headlands or islands separated by less than 1 nautical mile of water; and islands having less than 40 acres of area; does not include water surface of the oceans, bays, the Gulf of Mexico, Long Island Sound, Puget Sound, and the Straits of Juan de Fuca and Georgia.

Most of the inland waters are fresh water. There is no specific criterion for distinguishing between fresh water and saline water. The saline lakes are mainly in the Great Basin (nearly all of Nevada, the western half of Utah, and parts of Oregon, California, Idaho, and Wyoming,) which has no outlet to the ocean. In addition much of the water near the coast may range from fresh to salty, depending upon the geography of the area and to fluctuations in the tide.

SECTION 15 - GLOSSARY

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given for fish, shellfish, and other aquatic products taken by United States fishermen.

Common names as shown in Bureau reports	Other common names	Scientific names
FISH		
Alewives	{ Branch herring, big-eyed herring, river herring } Blueback, glut herring, shad herring	<i>Alosa pseudoharengus</i>
Amberjack		Jack
Anchovies		<i>Seriola</i> species
Angelfish		<i>Engraulis mordax</i> (Pacific)
Anglerfish	{ Goosefish, allmouth, headfish, monkfish, bellyfish } Balao	<i>Pomacanthus</i> species
Ballyhoo		
Barracuda		<i>Lophius americanus</i>
Bluefish	Tailor, skipjack	<i>Hemiramphus brasiliensis</i>
Blue pike	{ Pike perch, hard pike, blue pickerel (Canada) } Runner, hardtail, crevalle	<i>Sphyræna</i> species
Blue runner		
Bonito		<i>Stizostedion vitreum glaucum</i>
Bowfin	Fresh-water dogfish, grindle	<i>Caranx crysos</i>
Brown trout		<i>Sarda sarda</i> (Atlantic)
Buffalofish	Winter carp	<i>Sarda chiliensis</i> (Pacific)
Burbot	Lawyer, ling	<i>Amia calva</i>
Butterfish		<i>Salmo trutta</i>
Cabezone	Marbled sculpin	<i>Ictiobus</i> species
Cabio	Black bonito, cobia, ling, lemonfish	<i>Lota lota</i>
Cabrilla	Rock bass	<i>Poronotus triacanthus</i>
Carp	German carp, summer carp	<i>Scorpaenichthys marmoratus</i>
Catfish and bullheads ..		<i>Rachycentron canadus</i>
Chubs	{ Longjaw, bluefin, blackfin (United States), tullibee (Canada) } Scad	<i>Epinephelus analogus</i> (Pacific)
Cigarfish		Herring (Canada)
Cisco		<i>Ictalurus</i> species
Cod	Codfish	<i>Pyrodietis olivaris</i>
Crappie	White crappie, calico bass	All <i>Leucichthys</i> except <i>artedi</i> (Great Lakes)
Crevalle	Black crappie	<i>Decapterus punctatus</i>
Croaker	Common jack, jackfish	<i>Leucichthys artedi</i> (Lake Erie only)
Cunner	Crocus, hardhead	<i>Cadus morhua</i> (Atlantic)
Cutlassfish	Chogset, blue perch, bergall	<i>Gadus macrocephalus</i> (Pacific)
Cusk	Silver eel	<i>Pomoxis annularis</i>
Dolly Varden trout	Salmon trout, bull trout	<i>Pomoxis nigromaculatus</i>
Dolphin		<i>Caranx hippos</i>
Drum:		<i>Micropogon undulatus</i>
Black	Oyster cracker, oyster drum, sea drum	<i>Tautoglabrus adspersus</i>
Red	Channel bass, redfish, spotted bass	<i>Trichiurus lepturus</i>
		<i>Brosme brosme</i>
		<i>Salvelinus malma</i>
		<i>Corphaena hippurus</i>
		<i>Pogonias cromis</i>
		<i>Sciaenops ocellata</i>

(Continued on next page)

GLOSSARY

730

Common names as shown in Bureau reports	Other common names	Scientific names
FISH - Continued		
Eel:		
Common	<i>Anguilla rostrata</i>
Conger	<i>Conger oceanicus</i>
Flounders:		
Atlantic and Gulf Coasts:		
Gray sole	<i>Glyptocephalus cynoglossus</i>
Lemon sole	(weighing over 3-1/2 pounds each)	} <i>Pseudopleuronectes americanus</i>
Blackback	Winter flounder (weighing under 3-1/2 pounds each)	
Yellowtail	Dab	<i>Limanda ferruginea</i>
Dab	Sea dab	<i>Hippoglossoides platessoides</i>
Fluke	Summer flounder, gulf flounder, flounder	<i>Paralichthys</i> species
Pacific Coast:		
Arrowtooth halibut	<i>Atheresthes stomias</i>
California halibut	<i>Paralichthys californicus</i>
Sand dabs	<i>Citharichthys sordidus</i>
"Sole":		
Dover	<i>Microstomus pacificus</i>
English	<i>Parophrys vetulus</i>
Petrale	<i>Eopsetta jordani</i>
Rex	<i>Glyptocephalus zachirus</i>
Sand	<i>Psettichthys melanostictus</i>
Unclassified	Pleuronectidae and Bothidae
Flying fish	<i>Cypselurus</i> species
Garfish	Gar, sea gar	<i>Lepisosteus</i> species
Gizzard shad	Nanny shad, mud shad, winter shad	<i>Dorosoma cepedianum</i>
Goldfish	Sand perch, gold perch	<i>Carassius auratus</i>
Groupers	"Sea bass"	<i>Epinephelus</i> species
		<i>Mycteroperca</i> species
Grunts	Margate fish, sailors' choice	<i>Haemulon</i> species
Haddock	<i>Melanogrammus aeglefinus</i>
Hake:		
Red	Squirrel hake, ling, black hake, mud hake	<i>Urophycis chuss</i> (Atlantic)
White	Hake	<i>Urophycis tenuis</i> (Atlantic)
Pacific	Merluccio	<i>Merluccius productus</i> (Pacific)
Halfmoon	Rudder fish	<i>Medialuna californiensis</i>
Halibut	<i>Hippoglossus hippoglossus</i> (Atlantic)
		<i>Hippoglossus stenolepis</i> (Pacific)
Hardhead	Sacramento rockfish	<i>Orthodon microlepidotus</i> (Pacific)
Harvestfish	Starfish, dollarfsh, pappyfish,	} <i>Peprilus paru</i>
.....	butterfish (N.C.)	
Herring:		
Lake	Herring	<i>Leucichthys artedi</i> (Great Lakes except Erie)
Sea	<i>Clupea harengus</i> (Atlantic)
		<i>Clupea pallasii</i> (Pacific)
Thread	<i>Opisthonema oglinum</i>

Common names as shown in Bureau reports	Other common names	Scientific names
FISH - Continued		
Hickory shad	Tailor shad, skip, autumnal herring.....	<i>Alosa mediocris</i>
Hogchoker.....	<i>Trinectes maculatus</i>
Hogfish	Capitaine, perro perro	<i>Lachnolaimus maximus</i>
Jack mackerel	Horse mackerel.....	<i>Trachurus symmetricus</i>
Jewfish	<i>Promicrops itaiara</i>
King croaker.....	Kingfish, white croaker.....	<i>Genyonemus lineatus</i>
King mackerel	Cero, kingfish	{ <i>Scomberomorus cavalla</i>
King whiting or "kingfish".	Whiting, sea mink, ground mullet.....	<i>Scomberomorus regalis</i>
Lake trout.....	<i>Menticirrhus</i> species
Lamprey	<i>Salvelinus namaycush</i>
Launce	Sand eel, lant, sand launce	{ <i>Petromyzon marinus</i> (Atlantic)
Lingcod	Cultus cod, blue cod, buffalo cod, ling	<i>Lampetra tridentata</i> (Pacific)
Boston mackerel.....	<i>Ammodytes americanus</i>
Pacific mackerel.....	<i>Ophiodon elongatus</i>
Menhaden	Mossbunker, pogy, fatback.....	<i>Scomber scombrus</i> (Atlantic)
Minnows	<i>Scomber japonicus</i>
Mojarra	Sand perch, sand bream.....	<i>Brevoortia</i> species
Mooneye	Goldeye, toothed herring	Cyprinidae
Mullet	Jumping mullet, striped mullet, silver mullet	Gerridae
Muttonfish	Mutton snapper.....	<i>Hiodon</i> species
Ocean perch:		<i>Mugil</i> species
Atlantic	Rosefish, redfish, red perch.....	<i>Lutjanus analis</i>
Pacific	<i>Sebastes marinus</i>
Ocean pout	Eelpout, sea pout	<i>Sebastes alutus</i>
Opaleye.....	<i>Macrozoarces americanus</i>
Paddlefish	Spoonbill cat.....	<i>Girella nigricans</i>
Perch	Surffish.....	<i>Polyodon spathula</i>
Permit	Embiotocidae (Pacific)
Pigfish	Hogfish (N.C.)	<i>Trachinotus goodei</i>
Pike or pickerel	Great Lakes pike	<i>Orthopristis chrysopterus</i>
Pinfish	Bream, salt-water bream	<i>Esox</i> species
Pollock	Boston bluefish	<i>Lagodon rhomboides</i>
Pompano	<i>Pollachius virens</i> (Atlantic)
Quillback	Spearfish or skimfish	{ <i>Trachinotus</i> species (Atlantic)
Ratfish	<i>Palometa simillima</i> (Pacific)
Rock bass	Redeye, goggle-eye, groupers, sand bass	<i>Carpiodes</i> species
Rockfishes	Rock cod, snapper	<i>Hydrolagus colliei</i>
Sablefish.....	Black cod.....	{ <i>Ambloplites rupestris</i> (fresh-water)
Salmor:		<i>Paralabrax nebulifer</i> (Pacific)
Atlantic.....	<i>Sebastes</i> species (Pacific)
Pacific:		<i>Anoplopoma fimbria</i>
Chinook or king.....	Tyee, spring	<i>Salmo salar</i> (Atlantic)
Chum or keta.....	Fall, dog.....	<i>Oncorhynchus tshawytscha</i>
Pink	Humpback	<i>Oncorhynchus keta</i>
Red or sockeye.....	Blueback	<i>Oncorhynchus gorbuscha</i>
Silver or coho.....	<i>Oncorhynchus nerka</i>
		<i>Oncorhynchus kisutch</i>

GLOSSARY

Common names as shown in Bureau reports	Other common names	Scientific names
FISH - Continued		
Sand perch	Yellowtail, silver perch	<i>Bairdiella chrysura</i>
Sardine (Pacific).....	Pilchard	<i>Sardinops caerulea</i> (Pacific)
Sauger.....	Sand pike	<i>Stizostedion canadense</i>
Saury.....	Mackerel-pike.....	<i>Cololabis saira</i>
Sawfish.....	Scorpionfish.....	<i>Pristis pectinatus</i>
Sculpin.....	Porgee, paugy, fair maid.....	<i>Myoxocephalus</i> species
Scup or porgy.....		<i>Calamus</i> and <i>Stenotomus</i> species
Sea bass:		
Black.....	{ Black jewfish (Pacific).....	<i>Stereolepis gigas</i>
	{ Blackfish (Atlantic).....	<i>Centropristes striatus</i>
White.....		<i>Cynoscion nobilis</i> (Pacific)
Sea catfish.....	Gafttopsail.....	<i>Bagre marinus</i>
Sea robin.....		<i>Prionotus</i> species
Sea trout or weakfish:		
Gray.....	Gray trout, squeteague	<i>Cynoscion regalis</i>
Spotted.....	Spotted trout, speckled trout.....	<i>Cynoscion nebulosus</i>
White.....	White trout, sand trout.....	<i>Cynoscion arenarius</i>
Shad.....	American shad, white shad	<i>Alosa sapidissima</i>
Sharks:		
Grayfish.....	Dogfish, spiny and smooth dog.....	<i>Squalus</i> and <i>Mustelus</i> species
Soupfin.....		<i>Galeorhinus zyopterus</i>
Other.....		{ <i>Carcharodon</i> , <i>Carcharias</i> , <i>Sphryna</i> , <i>Prionace</i> and <i>Lamna</i> species
Sheepshead:		
Fresh-water.....	Fresh-water drum, gaspergou, gou.....	<i>Aplodinotus grunniens</i>
Salt-water.....	California redfish, fathead.....	<i>Archosargus</i> species (Atlantic)
Sierra.....		<i>Pimelometopon pulcher</i> (Pacific)
Silversides.....	Spearing.....	<i>Scomberomorus sierra</i> (Pacific)
Skates.....	Ray, rajafish.....	<i>Menidia</i> species
		<i>Raja</i> species
Smelt.....	{	{ <i>Osmerus mordax</i> (Atlantic and Great Lakes), Atherinidae and Osmeridae (Pacific)
	{ Eulachon.....	<i>Thaleichthys pacificus</i>
Snapper:		
Mangrove.....	Gray snapper.....	<i>Lutjanus griseus</i>
Red.....		<i>Lutjanus blackfordii</i>
Vermilion.....		<i>Rhomboplites</i> species
Yellowtail.....		<i>Ocyurus chrysurus</i>
Snook.....	Robalo, sergeantfish, pike.....	<i>Centropomus undecimalis</i>
Spadefish.....	Angelfish.....	<i>Chaetodipterus faber</i>
Spanish mackerel.....	Mackerel.....	<i>Scomberomorus maculatus</i>
Spanish sardine.....		<i>Sardinella anchovia</i>
Splittail.....		<i>Pogonichthys macrolepidotus</i>
Spot.....	Lafayette, goody.....	<i>Leiostomus xanthurus</i>
Steelhead trout.....	Salmon trout.....	<i>Salmo gairdneri</i>

SECTION 16 - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which commercial landings are made in the United States and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types which are normally used in their capture. The gear do not necessarily appear in the order of their importance. Illustrations of species landed in Hawaii are not included in this section.

For more detailed information on the nomenclature of the fishery products listed below, the reader is referred to Section 15 of this publication entitled, "Glossary."

ALEWIFE
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - POUND NETS, GILL NETS, WEIRS,
 DIP NETS, HAUL SEINES, FLOATING TRAPS,
 FYKE NETS

ANGLER FISH
 RANGE - NEW JERSEY TO MASSACHUSETTS
 GEAR - OTTER TRAWLS, POUND NETS

AMBERJACK
 RANGE - FLORIDA
 GEAR - HANDLINES, TROLL LINES

ANCHOVY
 RANGE - CALIFORNIA TO WASHINGTON
 GEAR - PURSE SEINES AND HAUL SEINES

ANGEL FISH
 RANGE - FLORIDA
 GEAR - HAUL SEINES

BARRACUDA (ATLANTIC)
 RANGE - FLORIDA
 GEAR - TROLL LINES, HANDLINES

BARRACUDA (PACIFIC)
 RANGE - CALIFORNIA
 GEAR - PURSE SEINES, LONGLINES, HANDLINES,
 TROLL LINES, GILL AND TRAMMEL NETS

PICTORIAL SECTION

737

BLUEFISH
RANGE - GULF OF MEXICO TO NEW ENGLAND
GEAR - HAUL SEINES, GILL NETS, POUND NETS,
TROLL LINES, PURSE SEINES

BLUE RUNNER OR HARDTAIL
RANGE - GULF OF MEXICO
GEAR - HAUL SEINES, GILL NETS, POTS

BONITO (ATLANTIC)
RANGE - NORTH CAROLINA TO MASSACHUSETTS
GEAR - POUND NETS, TROLL LINES, GILL NETS

BOWFIN
RANGE - FRESH-WATER
GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

BUFFALOFISH
RANGE - FRESH-WATER
GEAR - HAUL SEINES, FYKE NETS, TRAMMEL
NETS, TROLL LINES

BURBOT
RANGE - GREAT LAKES
GEAR - GILL NETS, FYKE NETS, POUND
NETS, TRAP NETS

BUTTERFISH
RANGE - FLORIDA TO NEW ENGLAND
GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

CABIO
RANGE - FLORIDA TO VIRGINIA
GEAR - HANDLINES, POUND NETS

CARP
RANGE - FRESH-WATER
GEAR - HAUL SEINES, GILL NETS, TRAP NETS,
FYKE NETS, POUND NETS, TROLL LINES

CATFISH
RANGE - FRESH-WATER
GEAR - HAUL SEINES, TROLL LINES, POUND
NETS, POTS, FYKE NETS

PICTORIAL SECTION

CHUB
 RANGE - GREAT LAKES
 GEAR - GILL NETS

CIGARFISH
 RANGE - FLORIDA
 GEAR - HAUL SEINES

COD
 RANGE - VIRGINIA TO MAINE, WASHINGTON,
 AND ALASKA
 GEAR - OTTER TRAWLS, LONGLINES, GILL NETS

CRAPPIE
 RANGE - FRESH-WATER LAKES
 GEAR - HAUL SEINES, LINES, POTS

CREVALLE
 RANGE - SOUTH ATLANTIC AND GULF STATES
 GEAR - HAUL SEINES, GILL NETS, LINES

CROAKER
 RANGE - GULF OF MEXICO TO NEW YORK
 GEAR - POUND NETS, OTTER TRAWLS, HAUL SEINES,
 GILL NETS

CUNNER
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS, HANDLINES

CUSK
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS, LONGLINES

DOLLY VARDEN TROUT
 RANGE - PACIFIC
 GEAR - POUND NETS, GILL NETS, LINES

DOLPHIN
 RANGE - FLORIDA TO NORTH CAROLINA
 GEAR - TROLL LINES

PICTORIAL SECTION

739

DRUM, BLACK
RANGE - TEXAS TO NORTH CAROLINA
GEAR - HAUL SEINES, POUND NETS, LINES

LEMON SOLE
RANGE - NEW YORK TO MAINE
GEAR - OTTER TRAWLS

DRUM, RED
RANGE - TEXAS - MARYLAND
GEAR - POUND NETS, HAUL SEINES, GILL NETS,
LINES

DAB
RANGE - MASSACHUSETTS TO NOVA SCOTIA
GEAR - OTTER TRAWLS, LONGLINES

EEL, COMMON
RANGE - FLORIDA TO NEW ENGLAND AND IN
MISSISSIPPI RIVER, LAKE ONTARIO
GEAR - POTS, SPEARS, POUND NETS

BLACKBACK OR WINTER FLOUNDER
RANGE - NORTH CAROLINA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS, FYKE NETS,
SPEARS, LINES

EEL, CONGER
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS

FLUKE
RANGE - TEXAS TO MASSACHUSETTS
GEAR - OTTER TRAWL, SPEARS, LINES

GRAY SOLE
RANGE - MASSACHUSETTS TO MAINE
GEAR - OTTER TRAWLS

FLYING FISH
RANGE - PACIFIC AND ATLANTIC OCEANS
GEAR - GILL NETS

PICTORIAL SECTION

FRIGATE MACKEREL
RANGE - MIDDLE ATLANTIC
GEAR - POUND NETS

GARFISH
RANGE - FRESH-WATER
GEAR - HAUL SEINES, LINES

GIZZARD SHAD
RANGE - NORTH CAROLINA TO MARYLAND,
GREAT LAKES
GEAR - HAUL SEINES, POUND NETS, GILL NETS

GOLDFISH
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

GRAYFISH
RANGE - PACIFIC
GEAR - LONGLINES, OTTER TRAWLS, GILL NETS

GROUPEE
RANGE - TEXAS TO SOUTH CAROLINA
GEAR - HANDLINES, POTS

GRUNT
RANGE - FLORIDA
GEAR - POTS, GILL NETS, LINES

HADDOCK
RANGE - NEW ENGLAND STATES
GEAR - OTTER TRAWLS, GILL NETS, LONGLINES

HAKE, RED
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, LONGLINES

HAKE, WHITE
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, LONGLINES

HAKE (PACIFIC)
RANGE - PACIFIC
GEAR - OTTER TRAWLS

HALIBUT
RANGE - PACIFIC COAST - NEW ENGLAND
GEAR - LONGLINES, OTTER TRAWLS

PICTORIAL SECTION

741

HARDHEAD
RANGE - CALIFORNIA
GEAR - FYKE NETS

HOGCHOKER
RANGE - CHESAPEAKE BAY
GEAR - POUND NETS, HAUL SEINES

HARVESTFISH OR "STARFISH"
RANGE - NORTH CAROLINA TO CHESAPEAKE BAY
GEAR - HAUL SEINES, POUND NETS

HOGFISH
RANGE - FLORIDA
GEAR - LINES

HERRING, LAKE
RANGE - GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, POUND NETS,
TRAP NETS

JEWFISH
RANGE - FLORIDA
GEAR - HANDLINES

HERRING, SEA
RANGE - NEW JERSEY TO NEW ENGLAND, PACIFIC
COAST STATES AND ALASKA
GEAR - PURSE SEINES, WEIRS, FLOATING TRAPS,
STOP SEINES

JOHN DORY
RANGE - MIDDLE ATLANTIC STATES
GEAR - OTTER TRAWLS

HICKORY SHAD
RANGE - FLORIDA TO RHODE ISLAND
GEAR - POUND NETS, HAUL SEINES, GILL NETS
FLOATING TRAPS

PICTORIAL SECTION

KING MACKEREL
 RANGE - TEXAS TO NEW YORK
 GEAR - TROLL LINES, GILL NETS, HANDLINES

KING WHITING
 RANGE - TEXAS TO MASSACHUSETTS
 GEAR - OTTER TRAWLS, HAUL SEINES, POUND NETS

LAKE TROUT
 RANGE - GREAT LAKES
 GEAR - GILL NETS, LINES, POUND NETS (TRAP NETS)

LAMPREY
 RANGE - FRESH-WATER
 GEAR - POTS, FYKE NETS

LAUNCE
 RANGE - NEW ENGLAND
 GEAR - HAUL SEINES

LINGCOD
 RANGE - CALIFORNIA TO ALASKA
 GEAR - OTTER TRAWLS, LONG LINES, HANDLINES

MACKEREL, ATLANTIC
 RANGE - CHESAPEAKE BAY TO MAINE
 GEAR - PURSE SEINES, GILL NETS, POUND NETS,
 FLOATING TRAPS

MACKEREL, JACK
 RANGE - CALIFORNIA
 GEAR - LINES, SEINES, LAMPARA NETS

MACKEREL, PACIFIC
 RANGE - CALIFORNIA
 GEAR - LINES, SEINES, LAMPARA NETS

MENHADEN
 RANGE - GULF OF MEXICO TO NEW ENGLAND
 GEAR - PURSE SEINES, POUND NETS

MOONEYE
 RANGE - GREAT LAKES
 GEAR - HAUL SEINES

MOONFISH
 RANGE - FLORIDA
 GEAR - HANDLINES, HAUL SEINES

PICTORIAL SECTION

743

MULLET
 RANGE - TEXAS TO NEW JERSEY
 GEAR - GILL NETS, HAUL SEINES, POUND NETS,
 CAST NETS

OCEAN POUT
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS

OCEAN PERCH
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS

PADDFISH
 RANGE - GULF OF MEXICO, MISSISSIPPI RIVER
 GEAR - HAUL SEINES, TROT LINES

PIGFISH
 RANGE - FLORIDA
 GEAR - POTS, HANDLINES, GILL NETS

PIKE OR PICKEREL
 RANGE - FRESH-WATER
 GEAR - TRAP NETS, FYKE NETS, GILL NETS,
 POUND NETS, HANDLINES

SARDINE, PACIFIC (PILCHARD)
 RANGE - CALIFORNIA TO WASHINGTON
 GEAR - PURSE SEINES, LAMPARA AND RING NETS,
 GILL NETS

PINFISH
 RANGE - FLORIDA TO NORTH CAROLINA
 GEAR - HAUL SEINES, GILL NETS

POLLOCK
 RANGE - MIDDLE ATLANTIC AND NEW ENGLAND STATES
 GEAR - LONGLINES, FLOATING TRAPS, POUND NETS,
 OTTER TRAWLS, GILL NETS

POMPANO
 RANGE - TEXAS TO NORTH CAROLINA
 GEAR - TRAMMEL NETS, HAUL SEINES, GILL NETS,
 HANDLINES

QUILLBACK
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TROT LINES, FYKE NETS

PICTORIAL SECTION

RATFISH
 RANGE - WASHINGTON TO ALASKA
 GEAR - BEAM TRAWLS, LONGLINES

ROCK BASS
 RANGE - GREAT LAKES
 GEAR - TRAP NETS, FYKE NETS, HAUL SEINES,
 GILL NETS

ROCKFISH
 RANGE - CALIFORNIA TO ALASKA
 GEAR - LINES, OTTER TRAWLS, PARANZELLA NETS,
 GILL NETS

RUDDERFISH
 RANGE - CALIFORNIA
 GEAR - LAMPARA AND RING NETS

SABLEFISH
 RANGE - PACIFIC COAST STATES AND ALASKA
 GEAR - LONGLINES, OTTER TRAWLS

SALMON, CHINOOK OR KING
 RANGE - CALIFORNIA TO ALASKA
 GEAR - POUND NETS, PURSE SEINES, GILL NETS,
 HAUL SEINES, TROLL LINES, REEF NETS

SALMON, CHUM OR KETA
 RANGE - OREGON TO ALASKA
 GEAR - POUND NETS, PURSE SEINES, GILL NETS,
 HAUL SEINES, REEF NETS

SALMON, PINK
 RANGE - WASHINGTON TO ALASKA
 GEAR - PURSE SEINES, POUND NETS, GILL NETS,
 REEF NETS

SALMON, RED OR SOCKEYE
 RANGE - OREGON TO ALASKA
 GEAR - GILL NETS, PURSE SEINES, POUND NETS,
 REEF NETS

SALMON, SILVER OR COHO
 RANGE - CALIFORNIA TO ALASKA
 GEAR - HAUL SEINES, PURSE SEINES, GILL NETS,
 TROLL LINES, POUND NETS, REEF NETS

SAUGER
 RANGE - GREAT LAKES
 GEAR - GILL NETS, HAUL SEINES, TRAP NETS,
 FYKE NETS

PICTORIAL SECTION

745

SCULPIN
RANGE - PACIFIC COAST STATES AND ALASKA
GEAR - LINES, GILL NETS, POTS

SCUP OR PORGY
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS, POUND NETS

SEA BASS
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS, HANDLINES, POTS

SEA CATFISH
RANGE - TEXAS TO CHESAPEAKE BAY
GEAR - OTTER TRAWLS, HAUL SEINES, HANDLINES

SEA ROBIN
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - POUND NETS, OTTER TRAWLS

SEA TROUT OR WEAKFISH, GRAY
RANGE - FLORIDA TO MASSACHUSETTS
GEAR - OTTER TRAWLS, POUND NETS, PURSE SEINES,
GILL NETS, HAUL SEINES

SEA TROUT OR WEAKFISH, SPOTTED
RANGE - MARYLAND TO TEXAS
GEAR - GILL NETS, TRAMMEL NETS, HAUL SEINES,
POUND NETS, OTTER TRAWLS, HANDLINES

SEA TROUT OR WEAKFISH, WHITE
RANGE - GULF OF MEXICO
GEAR - GILL NETS, HAUL SEINES, HANDLINES

SHAD
RANGE - FLORIDA TO NEW ENGLAND
GEAR - GILL NETS, POUND NETS, FYKE NETS,
HAUL SEINES

SHARK
RANGE - ATLANTIC COAST, GULF, PACIFIC COAST STATES
GEAR - LONGLINES, GILL NETS, OTTER TRAWLS

PICTORIAL SECTION

SHEEPSHEAD
RANGE - TEXAS TO CHESAPEAKE BAY
GEAR - HANDLINES, POTS

SHEEPSHEAD, CALIFORNIA
RANGE - CALIFORNIA
GEAR - LONGLINES, TRAMMEL NETS

SAND PERCH
RANGE - TEXAS TO NEW YORK
GEAR - HAUL SEINES, GILL NETS, POUND NETS

SILVERSIDES
RANGE - NEW YORK
GEAR - HAUL SEINES, OTTER TRAWLS

SKATE
RANGE - PACIFIC COAST, CHESAPEAKE BAY TO NEW ENGLAND
GEAR - LINES, OTTER TRAWLS, POUND NETS, HAUL SEINES

SKIPPER
RANGE - VIRGINIA TO NOVA SCOTIA
GEAR - POUND NETS, WEIRS

SMELT
RANGE - NEW YORK TO MAINE, PACIFIC OCEAN,
GREAT LAKES
GEAR - POUND NETS, DIP NETS, GILL NETS, HAUL SEINES

SNAPPER, MANGROVE
RANGE - FLORIDA
GEAR - HANDLINES, GILL NETS

SNAPPER, LANE
RANGE - FLORIDA
GEAR - HANDLINES

SNAPPER, RED
RANGE - TEXAS TO FLORIDA
GEAR - HANDLINES

SNOOK
RANGE - TEXAS TO FLORIDA
GEAR - GILL NETS, HANDLINES, HAUL SEINES

SPADEFISH
 RANGE - FLORIDA
 GEAR - GILL NETS, TRAMMEL NETS

SPANISH MACKEREL
 RANGE - TEXAS TO VIRGINIA
 GEAR - GILL NETS, LINES, HAUL SEINES

SPOT
 RANGE - GULF OF MEXICO TO MIDDLE ATLANTIC STATES
 GEAR - HAUL SEINES, GILL NETS, POUND NETS, OTTER TRAWLS

SQUAWFISH
 RANGE - CALIFORNIA
 GEAR - FYKE NETS, GILL NETS

STEELHEAD TROUT
 RANGE - OREGON TO ALASKA
 GEAR - HAUL SEINES, POUND NETS, GILL NETS, LINES, DIP NETS

STRIPED BASS
 RANGE - NORTH CAROLINA TO NEW ENGLAND, CALIFORNIA TO OREGON
 GEAR - HAUL SEINES, GILL NETS, POUND NETS, HANDLINES, FYKE NETS

STURGEON
 RANGE - COASTAL AND RIVER AREAS
 GEAR - GILL NETS, LINES

STURGEON, SHOVELNOSE
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, LINES, POUND NETS

SUCKER
 RANGE - FRESH-WATER
 GEAR - POUND NETS, FYKE NETS, GILL NETS, HAUL SEINES, TRAP NETS

SUNFISH
 RANGE - FRESH-WATER
 GEAR - POTS, SEINES, TRAP NETS

SWELLFISH
 RANGE - CHESAPEAKE BAY TO MIDDLE ATLANTIC
 GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

PICTORIAL SECTION

SWORDFISH
 RANGE - NEW ENGLAND AND CALIFORNIA
 GEAR - HARPOONS

TAUTOG
 RANGE - CHESAPEAKE BAY TO NEW ENGLAND
 GEAR - POUND NETS, HANDLINES, POTS

TENPOUNDER
 RANGE - FLORIDA
 GEAR - HAUL SEINES

THIMBLE-EYED MACKEREL
 RANGE - CHESAPEAKE BAY TO NEW ENGLAND
 GEAR - POUND NETS, PURSE SEINES, OTTER TRAWLS

TILEFISH
 RANGE - MIDDLE ATLANTIC AND NEW ENGLAND STATES
 GEAR - LONGLINES, REEF NETS, OTTER TRAWLS

TOMCOD
 RANGE - PACIFIC COAST, MIDDLE ATLANTIC AND
 NEW ENGLAND STATES
 GEAR - OTTER TRAWLS, DIP NETS

TRIGGERFISH
 RANGE - FLORIDA
 GEAR - HANDLINES

TRIPLETAIL
 RANGE - FLORIDA
 GEAR - HAUL SEINES, GILL NETS, LINES

TUNA, ALBACORE
 RANGE - PACIFIC COAST
 GEAR - LINES

TUNA, BLUEFIN
 RANGE - CALIFORNIA, NEW JERSEY TO MAINE
 GEAR - PURSE SEINES, LAMPARA NETS, TROLL LINES,
 POUND NETS, HARPOONS

TUNA, LITTLE
 RANGE - MASSACHUSETTS TO TEXAS
 GEAR - POUND NETS, TROLL LINES, OTTER TRAWLS

PICTORIAL SECTION

749

TUNA, SKIPJACK
RANGE - CALIFORNIA
GEAR - LINES AND PURSE SEINES

TUNA, YELLOWFIN
RANGE - PACIFIC
GEAR - LINES AND PURSE SEINES

WHITE BASS
RANGE - GREAT LAKES
GEAR - TRAP NETS, FYKE NETS, HAUL SEINES,
POUND NETS

WHITEFISH, COMMON
RANGE - GREAT LAKES
GEAR - GILL NETS, POUND NETS, TRAP NETS

WHITEFISH, MENOMINEE
RANGE - ALASKA, GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, TRAP NETS,
POUND NETS

WHITE PERCH
RANGE - NORTH CAROLINA TO MAINE
GEAR - POUND NETS, FYKE NETS, HAUL SEINES

WHITING
RANGE - VIRGINIA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS

WOLFFISH
RANGE - MASSACHUSETTS AND MAINE
GEAR - OTTER TRAWLS, LONGLINES

YELLOW PERCH
RANGE - GREAT LAKES, OTHER LAKES
GEAR - GILL NETS, TRAP NETS, POUND NETS,
FYKE NETS

YELLOW PIKE
RANGE - GREAT LAKES
GEAR - POUND NETS, FYKE NETS, GILL NETS,
TRAP NETS

PICTORIAL SECTION

BLUE CRAB
 RANGE - TEXAS TO RHODE ISLAND
 GEAR - TROT LINES, POTS, FYKE NETS, DIP NETS,
 SCRAPES, DREDGES

STONE CRAB
 RANGE - FLORIDA
 GEAR - DIP NETS, CRAB POTS

DUNGENESS CRAB
 RANGE - PACIFIC COAST STATES AND ALASKA
 GEAR - TRAPS

HORSESHOE CRAB
 RANGE - MARYLAND TO NEW YORK
 GEAR - POUND NETS, WEIRS, BY HAND

KING CRAB
 RANGE - ALASKA
 GEAR - POTS

FRESH-WATER CRAWFISH
 RANGE - RIVERS AND LAKES
 GEAR - POTS

ROCK CRAB
 RANGE - NEW ENGLAND
 GEAR - POTS

SPINY LOBSTER
 RANGE - CALIFORNIA AND FLORIDA
 GEAR - DIP NETS, POTS, HOOKS

PICTORIAL SECTION

LOBSTER, NORTHERN
RANGE - VIRGINIA TO MAINE
GEAR - POTS, OTTER TRAWLS

HARD CLAM
RANGE - FLORIDA TO MAINE
GEAR - HOES, DREDGES, TONGS, RAKES, BY HAND

SHRIMP
RANGE - TEXAS TO NORTH CAROLINA, MAINE,
CALIFORNIA, WASHINGTON, AND ALASKA
GEAR - SHRIMP TRAWLS

RAZOR CLAM, PACIFIC
RANGE - OREGON, WASHINGTON AND ALASKA
GEAR - SHOVELS

BUTTER CLAM
RANGE - PACIFIC COAST
GEAR - SHOVELS

SOFT CLAM
RANGE - MIDDLE ATLANTIC TO NEW ENGLAND,
PACIFIC COAST STATES
GEAR - FORKS, HOES, RAKES, DREDGES

LITTLE NECK CLAM
RANGE - PACIFIC COAST
GEAR - SHOVELS

CONCH
RANGE - FLORIDA TO MAINE
GEAR - OTTER TRAWLS, DREDGES, POTS, AND BY HAND

PICTORIAL SECTION

LIMPET
 RANGE - NEW YORK AND NEW ENGLAND
 GEAR - DREDGES

SEA SCALLOP
 RANGE - NEW JERSEY TO MAINE
 GEAR - DREDGES, OTTER TRAWLS

FRESH-WATER MUSSEL
 RANGE - FRESH-WATER STREAMS
 GEAR - CROWFOOT BARS, PICKS, HAND

STARFISH
 RANGE - ATLANTIC AND PACIFIC COAST
 GEAR - HOOKS, SCRAPES, "MOPS"

SEA MUSSEL
 RANGE - NORTH CAROLINA TO MAINE
 GEAR - DREDGES, TONGS, RAKES, HAND

OYSTER
 RANGE - TEXAS TO MASSACHUSETTS, PACIFIC COAST
 GEAR - TONGS, DREDGES, RAKES, BY HAND

TERRAPIN
 RANGE - TEXAS TO NEW JERSEY
 GEAR - HAUL SEINES, BY HAND

BAY SCALLOP
 RANGE - FLORIDA TO MASSACHUSETTS, WASHINGTON
 GEAR - DREDGES, SCRAPES, PUSH NETS, TONGS, RAKES,
 DIP NETS

GREEN TURTLE
 RANGE - FLORIDA
 GEAR - GILL NETS

PICTORIAL SECTION

753

LOGGERHEAD TURTLE
RANGE - FLORIDA TO NEW JERSEY
GEAR - GILL NETS

FROG
RANGE - FRESH-WATER, MARSHES, POND
GEAR - SPEARS, GRABS

HAWKSBILL TURTLE
RANGE - GULF OF MEXICO, AND ATLANTIC COAST
TO NEW YORK
GEAR - BY HAND, POUND NETS

SQUID
RANGE - VIRGINIA TO MAINE, CALIFORNIA AND
WASHINGTON
GEAR - LAMPARA NETS, GILL NETS, OTTER TRAWLS,
POUND NETS

SOFT-SHELL TURTLE
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, FYKE NETS, POTS

SPONGE
RANGE - FLORIDA
GEAR - HOOKS, DIVING OUTFITS

IRISH MOSS
RANGE - NEW ENGLAND
GEAR - RAKES

SECTION 17 - STATISTICAL PUBLICATIONS

754

THE FOLLOWING LIST OF PUBLICATIONS INCLUDES ALL REPORTS ISSUED IN THE CURRENT FISHERY STATISTICS SERIES DURING 1965.

C. F. S. NO.	TITLE	C. F. S. NO.	TITLE
3675	NEW YORK LANDINGS, SEPTEMBER, 1964	3752	RHODE ISLAND LANDINGS, NOVEMBER, 1964

Created in 1849, the Department of the Interior--a department of conservation--is concerned with the management, conservation, and development of the Nation's water, fish, wildlife, mineral, forest, and park and recreational resources. It also has major responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the Department works to assure that nonrenewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States--now and in the future.
